I. INTRODUCTION

1. With this *Report & Order*, we authorize the licensing of two new classes of FM radio stations -- one operating at a maximum power of 100 watts and one at a maximum power of 10 watts. Both types of stations, known as low power FM stations (LPFM), will be authorized in a manner that protects existing FM service. They will be operated on a noncommercial educational basis by entities that do not hold an attributable interest in any other broadcast station or other media subject to our ownership rules. Initially, only entities located in the communities the stations serve will be eligible to participate in this service. Even once this eligibility criterion is relaxed, we will grant a significant selection preference to locally-based applicants. We believe that the LPFM service authorized in this proceeding will provide opportunities for new voices to be heard and will ensure that we fulfill our statutory obligation to authorize facilities in a manner that best serves the public interest.

2. In establishing this new service, we are determined to preserve the integrity and technical excellence of existing FM radio service, and not to impede its transition to a digital future. In this regard, our own technical studies and our review of the record persuade us that 100-watt LPFM stations operating

without 3rd-adjacent channel separation requirements will not result in unacceptable new interference to the service of existing FM stations. Moreover, imposing 3rd-adjacent channel separation requirements on LPFM stations would unnecessarily impede the opportunities for stations in this new service, particularly in highly populated areas where there is a great demand for alternative forms of radio service. We will not, therefore, impose 3rd-adjacent channel separation requirements. To avoid any possibility of compromising existing service, given the new nature of the LPFM service, we will impose separation requirements for low power with respect to full power stations operating on co-, 1st- and 2nd-adjacent and intermediate frequency (IF) channels.¹ We believe that the rules we are adopting will maintain the integrity of the FM band and preserve the opportunity for a transition to a digital radio service in the future, while affording significant opportunities for new radio service.

II. ISSUE ANALYSIS

A. Goals

3. The *Notice of Proposed Rulemaking* we adopted on January 28, 1999² responded to petitions for rule making and related comments indicating substantial interest in, and public support for, increased citizens' access to the airwaves.³ In the year since we issued the *Notice*, proposing rules authorizing the operation of new low power FM radio stations, we have received comments and letters from thousands of individuals and groups seeking licenses for new radio stations. Many of these comments, which will be discussed in greater detail below, included comprehensive engineering studies and valuable suggestions for service rules. These comments -- from churches or other religious organizations,⁴ students,⁵ labor unions,⁶ community organizations and activists,⁷ musicians,⁸ and other citizens -- reflect a

¹ Existing FM stations must protect and are protected from interference from stations operating on the same, *i.e.*, co-channel, frequency, and each of the first three adjacent FM channels. Distance separation requirements are based on a desired-to-undesired signal strength ratio methodology and are designed to permit the reception, generally, of a "desired" station throughout its protected service area. Co-channel protection is based on the "desired" signal providing a signal strength of at least 40 dB greater than an "undesired" co-channel signal and 6 dB greater than an "undesired" first-adjacent channel signal within the "desired" station's protected service area. This methodology also ensures that a "desired" signal is not less than 40 dB less than an "undesired" 2nd- or 3rd-adjacent channel signal within the "desired" station's protected service area.

broad interest in service from highly local radio stations strongly grounded in their communities. In authorizing this new service today, we enhance locally focused community-oriented radio broadcasting.

4. Our goal in creating a new LPFM service is to create a class of radio stations designed to serve very localized communities or underrepresented groups within communities. To that end, in the *Notice* we proposed to establish two classes of low power FM radio service: a 1000-watt primary service and a 100-watt secondary service. We also sought comment on whether to establish a secondary class of stations operating between one and 10 watts.⁹ Commenters supporting low power radio generally argued for the creation of an LPFM service consisting of 100 or 10 watt stations. Most commenters did not support the creation of 1000 watt stations, arguing that the local aspect of LPFM service could be diminished by the size of the service area of such stations.¹⁰ Some commenters opposing the institution of 1000 watt service argued that 1000 watt stations present a greater interference potential than 100 or 10 watt stations.¹¹ We also stated in the *Notice* a hope that the largest of the proposed LPFM stations, at 1000 watts, could serve as a proving ground and an “entry” opportunity for new entrants into the full-power broadcasting industry. While we continue to view this as a worthwhile goal, we are persuaded by commenters that establishment of a 1000 watt service would not best fulfill our goals at the present time. Our establishment of a low power radio service consisting of two classes operating at maximums of 100 watts and 10 watts will allow licensees to serve their local communities, and will permit a greater number of new stations to be authorized, fostering a diversity of new voices on the airwaves.

5. Another goal expressed in the *Notice* was that any new LPFM service specifically include the voices of community based schools, churches and civic organizations. In the *Notice*, we raised the question of whether the LPFM service should include both commercial and noncommercial licensees or whether it should be entirely noncommercial. We also proposed that any stations of one to 10 watts be exclusively noncommercial, as we did not see commercial potential in stations with such limited service areas. Many of the commenters supporting LPFM strongly supported the establishment of an entirely noncommercial service.¹² We tentatively concluded that auctions would be required if mutually exclusive

¹² See, e.g., Comments of National Lawyers Guild, et al. at Section II; Comments of Prometheus Radio Project at 2.

applications for commercial LPFM facilities were filed, but noted that licenses for noncommercial educational or public broadcast stations are specifically exempted from auction by Section 309(j).¹³ Given the overwhelming support for the establishment of a noncommercial service, and the tendency of auctions to skew the allocation of licenses away from noncommercial entities that are more likely to serve underrepresented sections of the community, we conclude that eligibility for LPFM licenses should be limited to noncommercial, educational entities and public safety entities.

6. Finally, in proposing the creation of a new LPFM service, we made clear that we will not compromise the integrity of the FM spectrum. We are committed to creating a low power FM radio service only if it does not cause unacceptable interference to existing radio service. The *Notice* proposed that current restrictions on 3rd-adjacent channel operations might be eliminated in order to establish an LPFM service and also sought comment as to whether 2nd-adjacent channel separations are necessary. The modification of our existing rules concerning channel separations has generated extensive comment, as well as extensive engineering studies.¹⁴ Our Office of Engineering and Technology has conducted its own engineering tests, and has comprehensively reviewed the studies submitted by commenters. The rules adopted today reflect our well-considered conclusion that the elimination of 3rd-adjacent channel separation requirements for LPFM stations will not cause unacceptable levels of interference to existing radio stations. We recognize that the elimination of restrictions on both the 2nd- and 3rd- adjacent channels would create many more opportunities for community-based LPFM stations, but, given the ambiguity in the record on this issue and our commitment to ensure that the new LPFM service does not unacceptably interfere with existing radio services or impede a digital future for radio broadcasting, we must proceed cautiously. Accordingly, we will impose 2nd-adjacent channel separation requirements on LPFM stations.

B. Classes of Service

7. Background. In the *Notice*, the Commission proposed to authorize two classes of LPFM stations: (1) an LP1000 class which would be for primary stations operating with an effective radiated power (ERP) of between 500 and 1000 watts and with an antenna height above average terrain (HAAT) up to 60 meters, and (2) an LP100 class which would be for stations operating on a secondary basis with between 50 and 100 watts ERP and with antennas up to 30 meters HAAT. We also sought comment on a very low power secondary LP10 service with an ERP between one and 10 watts. For each proposal, the Commission sought comment on the power levels associated with each class, the eligibility for such stations and the effects that each class may have on the full power radio service.

8. Comments. *LP1000.* Generally speaking, the proposal to authorize LP1000 stations generated the most controversy among the commenters. The topic was one of the few areas that generated opposition by both current full service broadcasters and low power radio proponents, although for different reasons. Commenters connected to the existing broadcast industry and the Association of Federal Communications Consulting Engineers (AFCCE) expressed their concerns regarding the large potential for

¹³ 47 U.S.C. § 309(j)(2).

¹⁴ *See generally* Comments of National Association of Broadcasters (NAB); Reply Comments of UCC, et al.; Comments of the Consumer Electronics Manufacturing Association (CEMA); Comments of the Corporation for Public Broadcasting (CPB); Comments of National Public Radio (NPR).

interference posed by such operations.¹⁵ Additionally, AFCCE, as well as commenters that generally support the LP1000 proposal, expressed concerns that the service could preclude other lower powered LPFM stations. Most commenters supporting the LP1000 proposal proposed to limit LP1000 stations to rural areas or areas where sufficient spectrum could be found for both LP1000 and LP100 classes of service.¹⁶

9. *LP100.* The proposal for LP100 stations generated the most positive comments. Commenters generally felt that LP100 stations would provide a reasonable coverage area while remaining small enough to continue focusing on local needs. From an engineering standpoint, various commenters, including AFCCE, stated that the LP100 proposal appears “reasonable” and the proposed power range would allow the use of equipment, such as exciters and simple single bay antennas, that are already available.¹⁷ Not all comments were favorable, however. In general most negative comments shared the view stated by Disney that “[a] secondary LP100 service is undesirable for two reasons: first, because it would be difficult to establish a procedural and enforcement framework that would adequately protect FM broadcasters from interference; and second, because LP100 stations would create only marginal new radio listenership given the overriding levels of interference they would receive from full service stations.”¹⁸

10. *LP10.* The Commission’s proposal for an LP10 service operating with 10 watts or less elicited both highly favorable support and vociferous opposition. Most support for the proposal came from individuals and public interest groups. The comments in favor of LP10 generally viewed such a service as suitable for school campuses and local community organizations that wish to serve small areas and do not have the resources to construct and operate a higher-powered facility.¹⁹ Furthermore, given what they saw as a smaller potential for interference, these groups considered LP10 as the best option for crowded urban areas where higher-powered facilities are not likely to fit.²⁰ On the other hand, most comments opposing the LP10 proposal came from broadcasters and individuals concerned that the Commission would not be able to enforce its rules against the numerous LP10 stations and that widespread interference would result. In fact, the NAB stated that, while the Commission feels that an LP10 station would not result in significant interference, the sheer number of LP10 stations may result in more interference than the higher-powered station proposals would create. Additionally, the NAB cited the Commission’s 1978 determination that Class D 10 watt operations result in inefficient spectrum usage.²¹ However, one broadcaster, WEOK Broadcasting Corporation, noted that “[v]ery low power stations (perhaps one to 10 watts) could operate as useful adjuncts to college campuses,” provided there are some restrictions on usage.

¹⁵ See Comments of AFCCE at 11-13; see also Comments of NAB at 37-40; Comments of Disney (August 2, 1999) at 3-5, Engineering Statement at 6-7.

¹⁶ See, e.g., Comments of Vincent Chiao; Comments of Spencer Graddy Clark.

¹⁷ See Comments of AFCCE at 13.

¹⁸ See Comments of Disney at 2.

¹⁹ See, e.g., Comments of National Lawyer’s Guild; Comments of Amherst.

²⁰ See, e.g., Comments of ACLU, et al.; Comments of REC Networks.

²¹ See Comments of NAB (August 2, 1999) at 81-85 (Vol. One).

²² Likewise, not all public interest groups felt that an LP10 service would be a good idea. For example, the Civil Rights Organizations stated that LP10 stations should not be authorized because they would be “hard-to-regulate.”²³

11. Decision. We will not authorize 1000 watt stations. We will, however, authorize LP100 and LP10 stations, in two separate stages. First, we will license LP100 stations. These stations generally will provide coverage appropriate to community needs and interests expressed in the record in this rule making. The Mass Media Bureau is delegated authority to issue an initial and subsequent public notices inviting the filing of applications for LP100 stations on dates consistent with this *Order* and processing requirements. After a period of time sufficient to process the initial LP100 applications, the Mass Media Bureau is authorized to open a filing window for applications for LP10 stations, which can also serve very localized community needs. We adopt this sequential process in order to provide the larger (100 watt) stations with their greater service areas the first opportunity to become established. Given that some LP10 stations can be sited where LP100 stations cannot, we expect that opportunities will remain for LP10 after the initial demand for LP100 stations has been accommodated. Additionally, our own resources will be better spent first advancing service to relatively greater areas.

12. However, the record, including comments from both current broadcasters and public interest groups who were opposed to stations as large as 1000 watts, convinces us that licensing such a service is not in the public interest. As argued by commenters, 1000 watt stations may pose a greater interference concern for existing broadcasters and are not necessary to meet the most pressing and widespread demand for service expressed in the record. Moreover, LP1000 stations could have a significant preclusive effect on the licensing of LP100 and LP10 stations. Yet, these lower powered stations will permit many more opportunities for community-oriented service than would 1000-watt stations.

1. LP100 Service

13. LP100 stations will be authorized to operate with maximum facilities equivalent to 100 watts ERP at 30 meters (100 feet) HAAT²⁴ and minimum facilities equivalent to 50 watts at 30 meters (100 feet). This would permit a maximum 1 mV/m contour (60 dBu) with a radius of approximately 5.6 kilometers (3.5 miles), subject to the radio environment. Depending on population density, such a station could serve hundreds or thousands of listeners. This service will allow LPFM licensees to broadcast affordably to communities of moderate size and interest groups that are geographically proximate, such as ethnic, professional, industry and student groups, and retirement neighborhoods. Spectrum rights and responsibilities for this service are addressed below.

²² See Comments of WEOK Broadcasting Corporation at 7.

²³ See Reply Comments of the Civil Rights Organizations at 13 n. 24.

²⁴ Antenna heights greater than 30 meters HAAT would be permitted, but an appropriate downward adjustment in ERP would have to be made such that the 1 mV/m F(50,50) signal contour radius would not exceed 5.6 kilometers.

2. LP10 Service

14. LP10 stations will operate at between one and 10 watts ERP and an antenna height of up to 30 meters (100 feet) HAAT. Such stations will produce a 60 dBu signal out to about 1.6 to 3.2 kilometers (1 to 2 miles) from the antenna site. Such stations will fit in some locations where LP100 stations cannot, due to separation requirements, and will provide groups with the opportunity to operate stations that reach smaller communities or groups with a common interest. Spectrum rights and responsibilities for this service are addressed below.

C. Nature of Service and Licensees

1. Noncommercial Educational Service

15. Background. In proposing the creation of a new LPFM service, the Commission set forth its goals of encouraging diverse voices on the nation's airwaves and creating opportunities for new entrants in broadcasting. We raised the question of whether the service should be noncommercial in nature. We noted that while mutually exclusive commercial broadcast applications are subject to auction, certain noncommercial stations are specifically exempted from our auction authority.²⁵

16. Comments. Of those commenters supporting LPFM, an overwhelming majority endorsed establishing it as a noncommercial service. Commenters stressed the diversity that would be created by a noncommercial service,²⁶ and argued that noncommercial radio is the best way to serve local communities.²⁷ Other commenters, however, argued that low-power FM licensees should be available to both noncommercial and commercial licensees.²⁸

²⁵ 47 U.S.C. § 309(j)(2)(C).

²⁶ *See, e.g.*, Comments of Civil Rights Organizations at 16 (noncommercial stations would serve groups, including those defined by race, religion ethnicity, language or age, that are poorly served by advertiser-supported radio).

²⁷ *See, e.g.*, Comments of Civil Rights Organizations at 16-17 (noncommercial LPFM service is the best means of creating locally-based radio likely to serve needs of the local communities); Comments of National Lawyers Guild at 6-8 (noncommercial service will attract those who truly wish to provide a service to their community). *See also* Comments of The National Federation of Community Broadcasters (Community Broadcasters) at 7 (noncommercial LPFM service would avoid the debate over the impact of LPFM on the economics of radio broadcasting); *see also* Comments of Creative Educational Media Corp. at 4; Comments of Mid-America Broadcasting Co. at 3, Comments of Nassau Broadcasting at 3; Comments of WATD at 4; Comments of WBRV at 3.

²⁸ *See, e.g.*, Comments of Amherst (filed April 28, 1999) at 32-34 (supporting licensing all categories of LPFM service, but arguing that noncommercial uses should be given priority); *see also* Comments of Media Island International (both commercial and noncommercial stations should be licensed but noncommercial should be given a two-year "head start" on commercial); Comments of Trident Media at 2-3 (LPFM stations should have the option of being commercial in order to generate revenues and remain viable).

17. Decision. We will establish LPFM as a noncommercial educational service. Our goals in establishing this new service are to create opportunities for new voices on the air waves and to allow local groups, including schools, churches and other community-based organizations, to provide programming responsive to local community needs and interests. We believe that a noncommercial service is more likely to fulfill this role effectively than a commercial service. Commercial broadcast stations, by their very nature, have commercial incentives to maximize audience size in order to improve their ratings and thereby increase their advertising revenues. We are concerned that these commercial incentives could frustrate achievement of our goal in establishing this service: to foster a program service responsive to the needs and interests of small local community groups, particularly specialized community needs that have not been well served by commercial broadcast stations. We believe that noncommercial licensees, which are not subject to commercial imperatives to maximize audience size, are more likely than commercial licensees to serve small, local groups with particular shared needs and interests, such as linguistic and cultural minorities or groups with shared civic or educational interests that may now be underserved by advertiser-supported commercial radio and higher powered noncommercial radio stations.²⁹ We note that commenters addressing this issue favored establishing LPFM as a noncommercial service by a substantial margin, though some have argued that a commercial service could provide ownership opportunities for new entrants.³⁰ While we have considered the entrepreneurial opportunities that low power radio stations might create, we nonetheless conclude that a noncommercial service would best serve the Commission's goals of bringing additional diversity to radio broadcasting and serving local community needs in a focused manner.³¹

18. Establishing LPFM as a noncommercial service will have the added benefit of giving us additional flexibility to assign licenses for this service in a manner that is most likely to place them in the hands of local community groups that are in the best position to serve local community needs. As a general matter, where mutually exclusive applications are filed for initial commercial licenses or construction permits, the licenses or permits must be awarded by competitive bidding pursuant to 47 U.S.C. § 309(j). Licenses for noncommercial educational broadcast stations, as described in Section 397(6) of the Act, however, are not subject to competitive bidding.³² Accordingly, having decided to establish LPFM as a noncommercial service, we will require that LPFM licensees comply with the eligibility requirements of Section 397(6) of the Act.³³

²⁹ Comments of Civil Rights Organizations at 16-17

³⁰ See e.g., Comments of UCC, et al. at 25-26 (commercial low power stations could provide an important entrepreneurial opportunity for members of demographic groups that have historically been underrepresented in the broadcast industry as licensees and professionals).

³¹ While opposing the establishment of an LPFM service generally, NPR stated that "if there can be some assurance that prospective licensees will serve the community and the public interest, it is by" applying the "current eligibility criteria" for noncommercial educational licensees to all LPFM stations. Comments of NPR at 29-30.

³² See 47 U.S.C. § 309(j)(2)(C) and 397(6).

³³ As discussed below, we will license LPFM stations to operate in both reserved and non-reserved portions of the FM band. Nevertheless, the same eligibility and noncommercial service restrictions will apply to all LPFM stations, regardless of the portion of the FM band in which they are licensed to operate. In this regard, LPFM NCE stations will be different from full-service NCE stations that operate in the non-reserved band. The latter can convert from NCE status to commercial status at will by filing a notification letter with the Commission, but LPFM (continued....)

19. Section 397(6) of the Act defines “noncommercial educational broadcast station” as a station which:

(A) under the rules and regulations of the Commission in effect on the effective date of this paragraph, is eligible to be licensed by the Commission as a noncommercial educational radio or television broadcast station and which is owned and operated by a public agency or nonprofit private foundation, corporation, or association; or

(B) is owned and operated by a municipality and which transmits only noncommercial programs for education purposes.³⁴

Since the statute incorporates by reference the Commission’s noncommercial eligibility rules, we must look to those rules in determining noncommercial eligibility under Section 397(6) of the Act. The Commission’s rules limit eligibility for noncommercial radio stations to nonprofit educational organizations that show that the station will be used “for the advancement of an educational program.”³⁵ In applying this rule, the Commission has required that applicants be (a) a government or public educational agency, board or institution, or (b) a private, nonprofit educational organization, or (c) a nonprofit entity with a demonstrated educational purpose.³⁶ We require that an applicant described in (a) or (b) have an educational program and demonstrate how its programming will be used for the advancement of that program. An applicant applying as (c) must specifically show (i) that it is in fact a nonprofit educational organization, (ii) that it has an educational objective, and (iii) how its programming will further that objective.³⁷

20. The requirement that NCE licensees provide programming that advances an educational objective may be satisfied by a variety of programs, including but not limited to “instructional programs, programming selected by students, bible study, cultural programming, in-depth news coverage, and children’s programs such as Sesame Street that entertain as they teach.”³⁸ We have also stated that “in

stations will not be permitted to change their noncommercial status.

³⁴ 47 U.S.C. § 397(6).

³⁵ 47 U.S.C. § 73.503(a). The same eligibility requirements were in effect on the effective date of Section 397(6) of the Act. *See also* Appendix A to *Notice of Inquiry*, In the Matter of Eligibility for Noncommercial Educational FM and TV Broadcast Station Licenses, BC No. 78-164, FCC 77-382, 43 Fed. Reg. 30842 (1978), 30844 (processing guidelines for institutional and organizational applicants for noncommercial educational licenses).

³⁶ *See generally* Appendix A to *Notice of Inquiry*, In the Matter of Eligibility for Noncommercial Educational FM and TV Broadcast Station Licenses, BC No. 78-164, FCC 77-382, 43 Fed. Reg. 30842, 30844 (1978).

³⁷ *See, e.g.*, In re Applications of Music Ministries, Inc. and Community Education and Religious Broadcasting, *Hearing Designation Order*, 9 FCC Rcd 3628 (Aud. Serv. Div. 1994).

³⁸ *Further Notice of Proposed Rulemaking*, In the Matter of Reexamination of the Comparative Standards for Noncommercial Educational Applicants, MM Docket No. 95-31, FCC No. 98-269, 13 FCC Rcd 21167, 21169 (1998).

order to qualify as an educational station, it is not necessary that the proposed programming be exclusively educational.³⁹ Given the latitude that entities have under our rules to qualify as NCEs, we do not believe that limiting eligibility for LPFM licenses to NCEs will unduly limit the range of groups that will be eligible to apply for LPFM licenses or the services that they can provide.⁴⁰

2. Public Safety and Transportation

21. Background. One appropriate use of LPFM stations is use by public safety or transportation organizations. Although the *Notice* did not specifically raise this issue, a number of commenters proposed it.

22. Comments. We received a number of comments from public safety and transportation entities arguing that they would use LPFM stations to serve communities' need for public safety and traffic information. The New York State Thruway Authority (Thruway) argued that low power FM stations could be used for the benefit of public safety and transportation entities throughout the country to provide critical real-time information to travelers confronting emergency situations, traffic patterns and accidents.⁴¹ The Texas Department of Transportation stated a low power FM service would offer more reliable service to travelers than does its existing AM Travelers' Information Stations (TIS).⁴²

23. Decision. The public safety and transportation commenters propose important uses for low power FM stations. LPFM stations could be used by state or local governments or other not-for-profit entities to provide traffic, weather, and other public safety information to local communities. The use of LPFM stations for public safety purposes will further our goal of better serving local communities. Certain of these entities already hold TIS or other broadcast licenses. We emphasize, however, that we will not exempt these licenses from the cross-ownership restrictions, described below, and will therefore require TIS licensees or other public safety or transportation licensees, to return their existing licenses upon the initiation of LPFM service. Thus, in addition to noncommercial, educational organizations, associations or entities as described above, public safety radio services used by state or local governments or not-for-profit organizations, as defined in 47 U.S.C. § 309(j)(2)(A), will be eligible for LPFM licenses.

D. Eligibility and Ownership

24. In order to further our diversity goals and foster local, community-based service, we will

³⁹ *Memorandum Opinion and Order*, In re Application of Lower Cape Communications, Inc., FCC 80-453, 47 RR2d 1577, 1579 (1980). *See also Memorandum Opinion and Order, Florence Bridges*, FCC 78-719, 44 RR2d 667, 668 (1978).

⁴⁰ We note, however, that individuals cannot qualify as NCEs.

⁴¹ Comments of the New York State Thruway Authority at 2. *See also* Comments of the Port Authority of New York and New Jersey (LPFM stations could be used to facilitate the transmission of travel information to the public).

⁴² Comments of Texas Department of Transportation at 2.

not allow any broadcaster or other media entity subject to our ownership rules to control or to hold an attributable ownership interest in an LPFM station or enter broadcast related operating agreements with an LPFM licensee. Additionally, to foster the local nature of LPFM service, we are limiting eligibility to local entities during the first year LPFM licenses are available. We are also adopting a significant local ownership preference to be applied in resolving mutually exclusive applications. After local entities have had an opportunity to apply for construction permits, we will permit applications by qualified non-local applicants. After the first two years, we will permit multiple ownership of LPFM stations nationally, but only up to a maximum of 10 LPFM stations over a phased-in period.

25. Throughout this discussion we use the term “community” in a manner different from our traditional use of the term.⁴³ Here, we use the term to refer to the very small area and population group that will make up the potential service area and audience of an LPFM station. Given the very small nature of LPFM service contours and prospective audiences, we do not expect LPFM service areas to be coincident with traditional political boundaries that we use to define communities in other contexts, such as our allocations process.⁴⁴

1. Cross-Ownership Restrictions

26. Background. In the *Notice*, the Commission tentatively concluded that strict cross-ownership restrictions would be appropriate for low power radio. We proposed to prohibit any person or entity with an attributable interest in a broadcast station from having an ownership interest in any LPFM station in any market. We sought comment on whether the proposed strict cross-ownership restrictions would unnecessarily prevent individuals and entities with valuable broadcast experience from contributing to the success of the LPFM service. We also asked for comment on whether broadcasters with an attributable interest in broadcasting stations should be allowed to establish an LPFM station in a community where they do not have an attributable broadcast interest. We proposed to prohibit joint sales agreements, time brokerage agreements, local marketing or management agreements, and similar arrangements between full power broadcasters and low power radio entities. We also sought comment on whether the cross-ownership restriction should be extended to prevent common ownership of LPFM stations with cable systems, newspapers, or other mass media.

27. Comments. Several commercial broadcasters, educational broadcasters and individuals propose that cross ownership be allowed.⁴⁵ The NAB opposes restricting current broadcasters from low power ownership, claiming that consolidation of ownership in fact increases diversity of broadcast formats because of economic efficiencies.⁴⁶ The NAB further alleges that such a prohibition would preclude low

⁴³ The “community” concept is significant with respect to the limits on local ownership of LPFM stations. The concept of “community” is not relevant to our cross-ownership restrictions, which, as discussed below, are absolute and thus do not depend on a determination of the locality of a particular media interest.

⁴⁴ In allocating full-power FM stations to specific communities, we define a community as a geographically identifiable population grouping, usually determined based upon whether the area is incorporated or is listed in the U.S. Census. *Amendment of Section 73.202(b)*, MM Docket No. 90-385, 6 FCC Rcd. 5835 (1991).

⁴⁵ See, e.g., Comments of NAB at 71; Comments of Nassau Broadcasting Partners at 7.

⁴⁶ Comments of NAB at 70.

power stations from realizing efficiencies through joint operations with a full power counterpart.⁴⁷ Some commenters propose that current broadcasters be allowed to apply for LPFM stations, but that they should be required to give up their current station license prior to initiating operations at the LPFM station.⁴⁸ Others propose that full service station owners not be barred, so long as the LPFM station is in another market.⁴⁹ Metro Detroit Broadcasting Corporation proposes a waiver of multiple ownership provisions for minority-owned low power stations.⁵⁰

28. Most commenters, however, oppose cross-ownership of full-service stations and LPFM stations.⁵¹ The National Lawyers Guild, for example, asks why the Commission would allow the few companies who already hold a broadcast license also to hold a low power license when 99.9 percent of the American people are barred from using the most effective communications media in the nation.⁵² Most commenters also support the Commission's proposal to prohibit arrangements between full service broadcasters and LPFM entities, such as joint sales and time brokerage agreements. UCC, et al., adds that not only should such agreements between full power licensees and low power licensees be prohibited, but also that agreements of a similar nature between two or more low power licensees should be disallowed.⁵³

29. Decision. We will prohibit common ownership of LPFM and any other broadcast station, including translators and low power television stations, as well as other media subject to our ownership rules.⁵⁴ Thus, no broadcaster or other media entity, or any party with an attributable interest in them, can hold any attributable ownership interest in an LPFM licensee. One of the most important purposes of establishing this service is to afford small, community-based organizations an opportunity to communicate over the airwaves and thus expand diversity of ownership -- a purpose inconsistent with common ownership of LPFM stations and existing broadcast facilities or other media interests. Moreover, many of the commenters' remarks favoring cross ownership are directed to the establishment of the proposed LP1000 service. These arguments regarding efficiencies and economies and competitive standing for stations that might compete commercially, however, are less applicable to noncommercial educational LP100 and LP10 stations. Similarly, our own expressed concern that cross-ownership limits could retard the development of low power radio by excluding entities with broadcast experience is less pressing in the absence of commercial 1000 watt stations. We conclude that our interest in providing for new voices to speak to the community, and providing a medium for new speakers to gain experience in the field, would be

⁵⁴ 47 C.F.R. §§ 73.3555 & 76.501.

best served by barring cross-ownership between LPFM licensees and existing broadcast owners and other media entities. This prohibition is national and absolute in nature, unlike our existing cross-media ownership rules. Thus, for example, a newspaper cannot have an attributable interest in any LPFM station, regardless of whether the newspaper and LPFM station are co-located. We believe our interest in promoting diversity warrants such a strict approach.

30. We have also decided to prohibit operating agreements in any form, including time brokerage agreements, local marketing or management agreements, and similar arrangements, between full power broadcasters and LPFM broadcasters, or between two or more low power licensees, as suggested by UCC, et al.⁵⁵ As noted above, many commenters strongly oppose allowing any form of operating agreement that would dilute new ownership in the low power service. We are concerned that such agreements too readily could undermine the strict cross-ownership restriction adopted by allowing an ineligible entity to program or manage an LPFM station. We see no harm, however, in permitting any existing licensee to apply for an LPFM station on the condition that it is otherwise qualified and it represents that it will divest its interest prior to commencement of LPFM operations.

2. Requirement That Applicant Be Community-Based

31. Background. In the *Notice*, we sought comment on whether to establish a local residency requirement, although we were not inclined, at that time, to do so. We were concerned that a residency requirement would limit the pool of potential owners of low power stations and would deny opportunity to individuals and entities who resided in a location where no frequency is available, as there will not be low power frequencies available in every community. We also noted that we expected in the case of LP100s and LP10 stations, in particular, that the very nature of the stations would attract primarily local or nearby residents. We note that given our decision to restrict eligibility to noncommercial educational entities, the term “residency” is somewhat misleading. The issue now is whether we should limit applicants to entities based within the local community they wish to serve and, if so, how we should define whether or not they are community-based. Nonetheless, given that the *Notice* and comments are cast in terms of residency, we will continue to use the term, but do so in the organizational or institutional sense noted here.

32. Comments. Most commenters support a requirement that LPFM licensees be locally based.⁵⁶ They argue that local residents are more likely to be aware of issues of importance to the local community, and to gear their programming accordingly. UCC, et al. proposes that a majority of the entity’s board reside in the station’s service area.⁵⁷ The Civil Rights Organizations suggest that a majority of the licensee’s board of directors, the head of the board and the CEO be local residents.⁵⁸ Some commenters propose that applicants should be based within 25⁵⁹ or 50 miles⁶⁰ of the new low power

⁵⁸ Comments of Civil Rights Organizations at 21-22.

⁵⁹ See, e.g., Comments of Anthony M. Marimpietri, Jr. at 2; Comments of Quinnipiac College at 2; (continued....)

station, or within the station's proposed contour.⁶¹ Community Broadcasters proposes that a majority of the members of the governing body of the LPFM licensee be residents within the primary service contour of the proposed station.⁶² On the other hand, many commenters oppose the imposition of a residency requirement. Some argue that a local residency requirement would be struck down under the standards set forth by *Bechtel v. FCC*,⁶³ discussed below. Some point out that a residency requirement is incompatible with a five- to ten-station national ownership cap.⁶⁴

33. Decision. We continue to be concerned about the potentially preclusive effect of a strict local "residency" requirement and do not believe that local sources are the only valuable sources of information and service. Nonetheless, this service is intended to respond to the highly local interests that are not necessarily being met by full-power stations. Furthermore, since LPFM will be a noncommercial educational service, we cannot rely on commercial market forces and business incentives to ensure that local needs are fulfilled. Given the small coverage of LPFM stations, and our intention that the particular needs and interests of these small areas be served, local familiarity is more significant than it might be for a station serving a larger area and population. We thus conclude, after consideration of the comments and on further reflection, that the disadvantages of imposing a requirement that applicants be community-based are outweighed by the benefits to be gained by maximizing the likelihood that LPFM stations are operated by entities grounded in the communities they serve. Accordingly, for the initial and subsequent windows opened within two years after the first filing window for LPFM service has been opened, all LPFM applicants must be based within 10 miles of the station they seek to operate. This means that the applicant must be able to certify that it or its local chapter or branch is physically headquartered, has a campus, or has 75 percent of its board members residing within 10 miles of the reference coordinates of the proposed transmitting antenna. We chose the 10-mile distance as proportionate to most stations' likely effective reach. We are concerned that a larger distance, in many areas of the country, could lead to ownership outside the bounds of the station's real community and the people they will actually serve. We are concerned that a smaller area would too severely and unduly restrict the opportunities presented by LPFM. An organization providing public safety radio services will be considered community-based in the area over which it has jurisdiction.⁶⁵ Beginning two years after the first window for LPFM service has been opened, non-local applicants will be eligible to apply in subsequent windows for those classes of stations pursuant to public notices issued by the Mass Media Bureau. By this approach, we intend to make it more likely that local entities will operate this service. If no local entities come forward, however, we do not

⁶⁵ For example, a Virginia TIS entity would be eligible to apply for an LPFM license anywhere in the state of Virginia but not in any other state.

want the available spectrum to go unused.

34. We do not find convincing the argument made by some commenters that imposition of a local residency eligibility requirement here would pose the same legal problems as the “integration of ownership and management” factor formerly employed as a comparative criterion in the commercial broadcast service. While that comparative criterion was overturned as arbitrary and capricious in the *Bechtel* case,⁶⁶ that case did not invalidate a preference for locally based applicants *per se*. Rather, it rejected a preference for a particular form of business organization -- in which station owners worked more than a certain number of hours per week at their station -- that had not been shown to provide superior service even though the preference had been used for many years. The preference for local licensees here, in contrast, rests on our predictive judgment that local entities with their roots in the community will be more attuned and responsive to the needs of that community, which have heretofore been underserved by commercial broadcasters. We believe that local residence should carry particular weight here because we envision LPFM as a uniquely local service designed to serve local community needs. We note that while the court invalidated the integration criterion in the *Bechtel* decision, it recognized that an applicant who is familiar with the community is likely to be aware of its special needs.⁶⁷

35. Furthermore, we believe that local roots are particularly important in a noncommercial educational service like LPFM. As noted above, we cannot rely on commercial market forces to ensure that LPFM licensees are responsive to local needs because they will be noncommercial entities providing noncommercial program services. Indeed, Congress and the Commission have long recognized the unique role played by local entities in providing noncommercial educational programming, and we have favored local entities in providing other noncommercial educational services.⁶⁸

36. Finally, we do not believe that our preference for local applicants here raises the concerns voiced by the court in *Bechtel*. The court was concerned in *Bechtel* that the integration preference elevated quantitative factors – the number of hours the station owners promised to work at the station – over arguably more important qualitative factors such as broadcast experience and established local residence. In contrast, the community-based requirement that we adopt today does not rest on quantitative factors and is not based on promises of future conduct. Rather, we are adopting a simple, straightforward requirement that applicants be based in the local community. In addition, a primary concern underlying the court’s decision was that there was no obligation for a successful applicant in the commercial broadcast service to adhere to its integration proposal, and there was no evidence indicating the extent to which licensees had done so in the past. In contrast, LPFM licenses will not be transferable, so we can be assured that a local entity that is awarded the license will continue to operate the station. For these reasons, we do not believe that the community-based requirement that we adopt today suffers from the problems identified by the court in the *Bechtel* decision.

3. National Ownership Limits

37. Background. In the *Notice*, we also sought comment on the issue of a national multiple ownership cap. In particular, we asked whether a limit of five or ten stations nationally would provide a reasonable opportunity to attain efficiencies of operation while preserving the availability of the stations to a wide range of applicants and their essentially local character.

38. Comments. Comments on this issue are wide-ranging in their opinions. Some groups favor an absolute nationwide one-station-per-owner limit, arguing that a one-station-per-entity cap would distribute the low power stations as widely as possible and create the opportunity for the most diverse ownership.⁶⁹ The Civil Rights Organizations “disagree in the strongest terms” with the idea that a low power licensee could hold more than one license.⁷⁰ UCC, et al., states that the Commission’s belief that economies of scale from national ownership will improve service is especially ill-founded.⁷¹ It similarly exhorts us to disallow “agreements” between low power stations.⁷² Some commenters support a less strict national cap, arguing that some national cap will promote greater diversity in the service, but that a one-per-owner limit is excessively restrictive.⁷³ Several commenters agree with the Commission’s suggested range of five to ten stations, nationally.⁷⁴ Finally, some groups oppose any type of national cap. The NAB does not believe that a national ownership cap is allowed under the 1996 Act, and believes that common ownership will improve efficiency in the service.⁷⁵

39. Decision. We are adopting a staged rule, which will initially foster diversity by disallowing any common ownership of LPFM stations, but eventually permit the accumulation of

⁷⁵ Comments of NAB at 72.

additional stations where local applicants fail to come forward. This will increase the service available to the public and permit the efficiencies that can be achieved by multiple ownership where there is not an immediate local interest in operating a station. To achieve this, we will require that for the first two years of LPFM service, any one entity may own only one LPFM station. The two year-long period will begin on the day that the first LP100 filing window opens for applications. After the first two years, to bring into use whatever low power stations remain available but unapplied for, we will allow one entity to own up to five stations nationally, and after the first three years of this service, we will allow an entity to own up to ten stations nationwide.

40. In addition to ensuring the fullest use of LPFM spectrum in the long term, we believe that this tiered system will balance the interests of local entities, which we expect to be the first entrants in this service, and national noncommercial educational entities, which may be interested in additional local outlets to increase their reach and to achieve certain efficiencies of operation. We note the attribution exception for national or other large entities with local community-based chapters, discussed below in the attribution section, which will allow the local chapters to apply as individual entities and thus not be constrained by this national ownership provision.

41. In the *Notice*, we tentatively concluded that Section 202 of the Telecommunications Act of 1996 (the 1996 Act)⁷⁶ eliminating national multiple ownership restrictions for existing full power commercial stations does not apply to a new broadcast service. Given our decision to limit LPFM to noncommercial educational broadcasters, Section 202 clearly does not apply to LPFM and we need not discuss this issue further.⁷⁷

4. Local Ownership Limits

42. Background. In the *Notice*, we proposed to prohibit entities from owning more than one LPFM station in the same community. We were concerned that it would be difficult to achieve wide new entry into the broadcasting market and enhance diversity if more than one low power station in an area were under common control. At the same time, we sought comment on whether such a restriction would inappropriately deny to LPFM licensees the efficiencies achievable through multiple ownership, and on what cooperative arrangements might facilitate the development of LPFM service without unduly diluting its benefits. We also sought comment on the appropriate definition of “market” or “community” for the purposes of LPFM service.

43. Comments. Many commenters agree strongly with the Commission’s proposal that LPFM ownership should be limited to one station per community.⁷⁸ They argue that allowing multiple ownership in a local area would reduce the number and diminish the diversity of new entrants. Most contend that the demand for stations from local owners will be plentiful and that there will be no need to allow outside

⁷⁶ P.L. 104-104, 110 Stat. 56, § 202 (1996).

⁷⁷ *Id.*

⁷⁸ *See, e.g.*, Comments of National Lawyers Guild, etc. at 21; Comments of Civil Rights Organizations at 23-24; Comments of Thomas M. Eells at 3.

owners to own low power stations.⁷⁹ The NAB opposes the proposed ban on common local ownership, saying that common ownership leads to increased efficiencies.⁸⁰ A few commenters address the issue of the definition of “community” for the purpose of determining the limitations of local ownership but none offered specific alternative definitions. Some commenters expressed concern that the current Commission definition of a “community” is ambiguous and therefore subject to inequitable application.⁸¹

44. Decision. We will restrict local ownership and allow one entity to own only one LPFM station in a “community.” We concur with those commenters who expressed concern over the potential for diminution of diversity in ownership if one entity were allowed to control more than one station in their community. The comments opposing the restriction seem directed to and more appropriate in the context of the proposed 1000 watt service, which could have operated commercially. The primary benefit of local multiple ownership, increased efficiency, is less compelling with respect to LP100 and LP10 noncommercial educational stations, particularly as compared to the benefit to a community of multiple community-based voices. As noted above, we use the term *community* in this *Report and Order* to refer to the very small population group that makes up a station’s potential audience. For purposes of the local ownership limits, we will require that no entity own or have an attributable interest in two or more LPFM stations located within 7 miles of each other. That is, to comply with our local ownership limits, the antennas of commonly-owned stations must be separated by at least seven miles. We believe seven miles is appropriate given the approximately 3.5 mile signal reach of LP100 stations. Although the signal reach of LP10 stations is smaller, for the sake of simplicity we will apply the seven-mile ownership separation to both classes of service.

45. In the *Notice* we noted that Section 202 of the 1996 Act permitted significant local multiple ownership of full power commercial radio stations but questioned whether this standard would apply to a new low power service. Our decision here, however, to limit LPFM stations to noncommercial educational service renders this question moot. As discussed above regarding the national multiple ownership issue, Section 202, by its terms, does not apply to noncommercial stations.

46. We note that the attribution exception for local chapters of national entities, discussed in the next section, will allow local chapters to apply as individual entities and thus avoid the bar that the national ownership rules would otherwise impose.

5. Attribution

47. Background. Given the significance we have accorded the ownership of LPFM stations, the strict cross- and multiple-ownership rules and the community-based eligibility and selection criteria we are adopting, determining who “owns” or constitutes a low power radio applicant or licensee is critically important. In the *Notice*, we sought comment on what interests or relationships should be attributable in

⁷⁹ See, e.g., Comments of Civil Rights Organizations at 21.

⁸⁰ Comments of NAB at 72.

⁸¹ Comments of University of Dayton at 7; Comments of Positive Alternative Radio, Inc., et al. at 12; Comments of Morris Broadcasting Company of New Jersey, Inc. at 6.

this regard.

48. Comments. Comments on attribution vary widely. Some commenters express concern that if the existing attribution rules were applied to these stations, some entities with large national organizations and small chapters would be unable to hold multiple licenses even though they maintain a local presence and would provide community-oriented programming.⁸² Other commenters propose that attribution rules be waived in the case of accredited educational institutions, so that they can hold a full power station and also an LPFM station.⁸³ Amherst argues that it should be illegal for a subsidiary, affiliate, agent or franchisee of any institution holding a broadcast license to acquire an LPFM license.⁸⁴

49. Decision. We will apply rules similar to the existing commercial attribution rules to determine a licensee's compliance with the ownership limits set forth above. Because many of the entities that will hold LPFM licenses will be non-stock corporations (or other non-stock entities), we will attribute the interests of the applicant, its parents, its subsidiaries, their officers and members of their governing boards. If an entity that holds an LPFM license does have stock, then the existing attribution rules will apply and voting stock interest of 5% or more will be attributable unless the investor is passive in nature, in which case voting stock interests of 20% or more will be attributable. Partners and non-insulated limited partners are attributable, as are officers and directors. Non-voting stock and debt are not attributable unless they satisfy the "equity-debt-plus" standards set forth in our recent attribution order.⁸⁵ Thus, for example, if a full-power broadcaster in a community were to invest in an LPFM licensee in that same community and the investment accounted for more than 33% of the LPFM's total capitalization, the investment would be attributable and would violate the cross-ownership ban discussed above. Similarly, if a director of the same full power broadcaster were to act as an officer of the LPFM, the director would be attributed with both stations and would violate the ban. Consistent with the existing commercial attribution rules,⁸⁶ however, an exception will apply to certain officers and directors of the parent of an LPFM applicant or licensee. Such an officer or director may hold otherwise attributable interests in a broadcast licensee or other media entity subject to our ownership rules without making the LPFM applicant ineligible, provided

⁸⁴ Comments of Amherst at 42-43.

⁸⁵ Report and Order in MM Docket Nos. 94-150, 92-51 & 87-154, FCC 99-207 (August 6, 1999) ("Attribution R&O").

⁸⁶ 47 C.F.R. § 73.3555 Note 2(h) ("The officers and directors of a parent company of a broadcast licensee, cable television system or daily newspaper, with an attributable interest in any such subsidiary entity, shall be deemed to have a cognizable interest in the subsidiary unless the duties and responsibilities of the officer or director involved are wholly unrelated to the broadcast licensee, cable television system or daily newspaper subsidiary, and a statement properly documenting this fact is submitted to the Commission."); see also Attribution of Ownership Interests, 97 FCC 2d 997 (1984), *on recon.*, 58 RR 2d 604 (1985), *on further recon.*, 1 FCC Rcd 802 (1986).

the duties and responsibilities of the officer or director are wholly unrelated to the LPFM station and the officer or director recuses himself or herself from consideration of any matters affecting the LPFM station.⁸⁷ This exception will avoid making ineligible entities that will serve the purposes of this service well, such as universities or schools, which may have large and diverse board membership, while protecting against control of an LPFM licensee by ineligible media owners. For the same reason, in the LPFM context we will extend the exception to officers and directors of the LPFM applicant or licensee itself, if that entity is a multifaceted organization, such as a university, and the duties and responsibilities of the officer or director are wholly unrelated to the LPFM station and the officer or director recuses himself or herself from consideration of any matters affecting the LPFM station.⁸⁸ We emphasize that these exceptions are narrow in scope. An individual holding an attributable media interest may not act as an officer of the LPFM station, nor function in any other attributable role.

50. We will, moreover, include an attribution exception for local chapters of national or other large organizations. In the event that a local chapter can demonstrate that it: (1) is separately incorporated, and (2) has a distinct local presence and mission, the local chapter can apply for a license in its own right and the national entity's "ownership" will not be attributed to it. In order to meet this standard, the local entity must be able to show a significant membership within the community, as well as a local purpose that can be distinguished from its national purpose. For example, the general purpose of raising awareness of the toxic waste problem in the United States would not suffice, but raising awareness of the toxic waste problem in particular local areas would meet the local purpose standard.

6. General Character Qualifications and Unlicensed Broadcasters

51. Background. In the *Notice*, we generally proposed to apply the same standards for character qualification requirements to all LPFM broadcasters as we do to full power broadcasters. The Commission asked if commenters saw any reason to distinguish between full and low power radio licensees for this purpose. In addition, we sought comment on whether to disqualify unlicensed broadcasters who once violated or who still are violating Commission rules. We sought comment on whether the Commission should adopt a middle ground and accept applications from parties who have broadcast illegally, but who either (1) promptly ceased operation when advised by the Commission to do so, or (2) voluntarily ceased operation within ten days of the publication of the *Notice* in the *Federal Register*.

52. Comments. The National Lawyers Guild and the Civil Rights Organizations both argue for amnesty for unlicensed broadcasters.⁸⁹ Many individuals insist that without radio "pirates," LPFM would not have been created.⁹⁰ Others, such as Amherst and UCC, et al., support the middle ground set

⁸⁷ Given the nature of the LPFM service and our goal of limiting the burdens imposed on the service, we will not require the submission of a statement to the Commission documenting this recusal (*cf.* 47 C.F.R. § 73.3555 Note 2(h)), but we expect licensees to effect such a recusal and to abide by it.

⁸⁸ Unlike in the commercial attribution rule, we will not require the applicant or licensee to seek a waiver under these circumstances. *See* 47 C.F.R. § 73.3555 Note 2(h).

⁸⁹ Comments of the National Lawyers Guild, etc. at 3-4; Comments of Civil Rights Organizations at 33.

⁹⁰ *See, e.g.,* Comments of Stephen G. Toner at 2.

forth in the *Notice*, saying that it is most fair to the interests of future low power broadcasters and to the public.⁹¹ The Alliance for Community Media also supports the Commission's proposed compromise.⁹² Many commenters believe that anyone who has operated illegally should not be eligible for a license. NAB believes that because "pirate" broadcasters operated illegally, they should not be excused or granted amnesty.⁹³ Some object to restricting parties with an interest in a broadcast station from owning an LPFM station, but allowing "pirates" to own them.⁹⁴

53. Decision. We have decided, as we proposed, to apply the same character qualification requirements to low power station licensees as we currently apply to full power licensees. The Commission's character policy is underpinned by our interest in a licensee's truthfulness and reliability. We have a critical need to ascertain whether a licensee will in the future be forthright in its dealings with the Commission and operate its station in a manner consistent with the requirements of the Communications Act and the Commission's rules and policies.⁹⁵ No commenter showed a reason to distinguish between full and low power broadcasters on this basis, and we do not believe one exists.

54. The most significant specific question that character concerns raise in the context of this proceeding, as discussed in the *Notice*, is how past illegal broadcast operations reflect on that entity's proclivity "to deal truthfully with the Commission and to comply with our rules and policies,"⁹⁶ and thus on its basic qualifications to hold a license. We are persuaded to adopt our original proposal and accept a low power applicant who, if it at some time broadcast illegally, certifies, under penalty of perjury, that: (1) it voluntarily ceased engaging in the unlicensed operation of any station no later than February 26, 1999, without specific direction to terminate by the FCC; or (2) it ceased engaging in the unlicensed operation of any facility within 24 hours of being advised by the Commission to do so. Applicants will be required to make such certifications as part of their applications for an LPFM station. Such certifications will be made with respect to the applicant as well as all parties to the application (*i.e.*, any party with an attributable interest in the applicant). Submission of false or misleading certifications will subject the applicant to enforcement action including fines, revocation of license and criminal penalties.

55. Contrary to some commenters' arguments, this rule does not unconstitutionally infringe on

the First Amendment rights of unlicensed broadcasters.⁹⁷ Disqualification under this rule is based solely on lack of compliance with statutory and regulatory requirements. All parties should note, however, that as licensed broadcasters, ignorance, whatever its cause, is not considered an excuse for violation, and full compliance with our rules will be required. Moreover, as implied by the provisions of the *Notice*, the illegality of unauthorized broadcasting must now be presumed to be well-known, and any unlicensed broadcast operation occurring more than 10 days after the *Notice* was issued will make the applicant ineligible for low power, full power, or any other kind of license and will be subject to fines, seizure of their equipment, and criminal penalties.

E. Technical Rules

1. Spectrum for Low Power Radio

56. Background. In the *Notice*, the Commission stated that it did not intend to allocate new spectrum for a low power radio broadcasting service. The utilization of new spectrum would require listeners to purchase new equipment to receive the service, which would significantly delay the benefits of the service to the public. We proposed to authorize low power radio stations within the FM band only. This determination was based partly on the extent of congestion within the AM band, with numerous existing stations experiencing significant interference. Furthermore, we recognized that low power AM stations were capable of causing significantly higher levels of interference as a result of AM signal propagation characteristics. With regard to the use of the FM band, we concluded that the large number of existing FM stations precluded us from designating any specific frequencies for LPFM service, as no such channels are available throughout the country. Thus we sought comment on whether we should allow LPFM stations to operate throughout the entire band or restrict the reserved portion of the FM band (Channels 201-220) for noncommercial educational (NCE) stations. We also contemplated that low power radio stations would desire to use auxiliary broadcast frequencies, where available -- for example, for studio-to-transmitter links and transmissions of remote broadcasts -- and sought comment in this regard.

57. Comments. No commenters specifically supported the allocation of new spectrum for the proposed service.⁹⁸ Many commenters agreed that existing interference within the AM band and the relative complexity of AM facilities should preclude consideration of a low power AM service.⁹⁹ Some commenters, however, argue that an AM low power station should be an option in areas where the FM spectrum is too crowded to permit new stations. With regard to the FM band, most commenters support the view that the reserved band should continue to be reserved for NCE use only. However, NPR, CPB and several other commenters are particularly concerned that the introduction of numerous new stations in the reserved band would potentially increase interference to existing stations, especially in areas beyond

⁹⁷ See *National Broadcasting Co. v. United States*, 319 U.S. 190 (1943).

⁹⁸ One commenter did propose operation on "Channels 198, 199 and 200" (presumably 87.5 MHz, 87.7 MHz, and 87.9 MHz). See Comments of American Civil Liberties U, et al at 14. These frequencies are currently allocated for television broadcasting on TV Channel Six (82-88 MHz). Channel 200 is reserved for Class D (secondary) stations relocating to eliminate interference and was not proposed for low power use at this time. See 47 C.F.R. § 73.512.

⁹⁹ See, e.g., Comments of Aaron Reed; Comments of Chuckie Broadcasting Company; Comments of Oklahoma Department of Transportation.

their protected contours.¹⁰⁰ At the same time, other commenters expressed the desire to allow NCE low power stations throughout the FM band.¹⁰¹

58. Decision. We will authorize low power radio stations throughout the FM band, where the stations will fit, but not in the AM band. Although FM band crowding may preclude or limit LPFM opportunities in certain markets, we are not persuaded that the creation of an AM low power radio service is warranted. Likewise, we acknowledge the concerns of CPB and NPR about the current “crowding” within the reserved band. However, we note that we are adopting minimum distance separations between LPFM and full-service stations based upon the assumption that full service stations operate with maximum height and power for their class. Therefore, an LPFM station would generally provide greater protection to stations operating in the reserved band than that afforded to them by other full service stations, for which station facilities are spaced more closely on the basis of the contour protection methodology.¹⁰² Because LPFM stations will be licensed throughout the FM band, they will not be concentrated in the reserved portion of the FM spectrum. We note, however, that LPFM stations, regardless of their location in the FM band, are reserved to qualified NCEs. We will apply the same interference protection and other technical standards for LPFM operations in the reserved and nonreserved bands. This will facilitate application processing and uniform LPFM technical operating requirements.

59. In view of their relatively smaller service areas, we believe that most LPFM stations will co-locate program origination and transmission facilities. As a result, these stations would not require studio-to-transmitter links (STL) between these facilities. However, we will not foreclose LPFM operators the use of broadcast auxiliary frequencies used by full-service radio stations for this purpose. LPFM stations may also desire to air programming relayed from a remote location, such as an athletic event, or in connection with news gathering. Generally, we will permit entities authorized to operate LPFM stations to use remote pickup frequencies and radio broadcast auxiliary frequencies in the manner in which full-service stations use these frequencies, pursuant to the technical rules and procedures given in Subparts D and E of Part 74 of our rules. However, we will require that LPFM operations on auxiliary frequencies be secondary to that of full-service broadcast stations and other primary users, given the congestion of frequency use in some locales. We note that TV auxiliary frequencies are licensed to low power TV stations on this basis.¹⁰³ An entity seeking to operate an LPFM station may apply for broadcast auxiliary license only after it has been authorized to construct the LPFM station.¹⁰⁴

¹⁰¹ See, e.g., Comments of Amherst (April 28, 1999) at 70-71; American Civil Liberties Union of Massachusetts at 13.

¹⁰² We have identified a finite number of “superpowered” facilities operating in the reserved band that exceed the permissible maximum class facilities. Such facilities will receive protection in proportion to their operating facilities. See ¶ 70.

¹⁰³ 47 C.F.R. § 74.602(f).

¹⁰⁴ Broadcast auxiliary applications are filed on FCC Form 600 and are processed by the Commission’s Wireless Telecommunications Bureau.

2. LPFM Spectrum Rights and Responsibilities

60. Background. In the *Notice*, we raised issues regarding the spectrum priority of the contemplated classes of LPFM service. We recognized that our resolution of these issues would affect where LPFM stations could locate and the stability of their operations. Additionally, LPFM interference protection rights and responsibilities could affect existing and future FM radio service. The *Notice* proposed a 1000-watt primary service and a 100-watt secondary service. It sought comment on a 10-watt class of LPFM station that would be secondary to all other FM radio services. As proposed, LP100 and LP10 stations would not be permitted to interfere within the protected service contours of existing and future primary stations and would not be protected against interference from these stations. We sought comment on whether LP100 stations should be permitted to select channels without regard to interference received and on the extent to which LP100 stations should protect FM translator and booster stations.

61. Comments: Given our decision not to create a 1000-watt LPFM station class, this summary is limited to the issue of spectrum priorities for LP100 and LP10 stations. The comments were divided on whether LPFM stations should have a primary or secondary regulatory status. Several commenters supported primary status for all LPFM stations, mainly to help ensure their survival.¹⁰⁵ The ACLU of Massachusetts believes that all LPFM stations should be primary, but should be willing to accept higher than normal amounts of interference.¹⁰⁶ The Community Broadcasters Association supported primary status for all LPFM stations as a way to open capital markets for these stations.¹⁰⁷ Some commenters supported a modified form of primary status for LPFM. Amherst Alliance supported a status that would not permit LPFM stations to “bump” other stations, but would also protect LPFM stations from being “bumped.”¹⁰⁸ Community Broadcasters commented that LPFM stations should be given primary status with respect to analog stations, but have a secondary status with respect to digital radio stations.¹⁰⁹ Other commenters, including some broadcast licensees, supported a secondary status for LPFM stations.¹¹⁰ Big City Radio, Inc., for example, stated that LPFM stations should not be permitted to block the relocation of full-power stations forced to relocate their transmitter sites.¹¹¹ Mississippi Valley Broadcasters, LLC commented that LPFM stations should be given the same secondary spectrum priority

as FM translator stations.¹¹² According to the Association of Federal Communications Consulting Engineers, LP100 stations should be secondary and not be permitted to displace FM translator stations.¹¹³ Aaron Read commented that Class D FM stations should be secondary to LP100 stations because of their higher power, but that microradio stations should be secondary to Class D.¹¹⁴ Jeffrey Richman, chief operator of a Class D station, commented that Class D licensees should not be secondary to LPFM licensees.¹¹⁵

62. Decision. In crafting interference protection rights and responsibilities for an LPFM service, we seek to balance our vital interest in maintaining the technical integrity of existing radio services with our desire to create a supple and viable community-oriented radio service. First and foremost, we must require that new LPFM stations protect radio reception within the service areas of existing full-service stations, as well as the existing services of FM translator and booster stations. Second, LPFM stations, with their much smaller service areas and fewer service regulations, should not prevent FM stations from modifying or upgrading their facilities, nor should they preclude opportunities for new full-service stations. Additionally, LPFM applications will be required to protect vacant FM allotments. Subject to these constraints, however, we want to foster a stable and enduring LPFM service. Once an LPFM station is built and operating, we wish to permit it to continue operating on its channel, wherever possible, as the radio environment changes around it. We want to minimize, to the extent possible, the situations in which we would require an LPFM station to change its channel or cease operating. This measure of stability, we believe, would assist LPFM station applicants or operators in obtaining financing to construct and operate stations and to better serve their communities. It may also create an incentive for the operation of a first local radio station in many communities or radio service that would be responsive to other unmet needs. We believe the approach set forth below appropriately balances the above objectives.

63. *Protection to existing FM radio services:* Applicants for new or modified LP100 or LP10 facilities will be required to meet minimum station separation distances to protect the service contours of authorized commercial and noncommercial FM stations of all classes, including Class D. In the same manner, they will be required to protect the existing service of FM translator and booster stations and LP100 stations. We will also require LPFM applicants to protect full-service FM, FM translator and LP100 facilities proposed in applications (for example, FM minor change applications) filed before a public notice announcing an LPFM application filing window. Applications filed after the release date of an LPFM window notice will not be protected against LPFM applications filed in that window. However, full-service applicants will not be required to protect the facilities proposed in LPFM applications. We believe this approach fairly balances the interests of full-service and LPFM applicants. LPFM station

¹¹² Comments of Mississippi Valley Broadcasters at 8.

¹¹³ Comments of the Association of Federal Communications Consulting Engineers at 13. The comments of National Public Radio also contend that LPFM stations should not be permitted a higher priority than FM translator stations, Comments of NPR at 23-27. The National Association of Broadcasters, while opposing the creation of any LPFM service, submits that FM translators and boosters must be protected against new LP100 stations, Comments of NAB Volume One (August 2, 1999) at 63-64.

¹¹⁴ Comments of Aaron Read at 2.

¹¹⁵ Comments of Jeffrey Richman at 1.

proposals to operate on channels 201-220 will also be required to protect television stations operating on TV Channel 6. Applicants for LP100 stations will not be required to protect authorized LP10 stations or LP10 application proposals, given the relatively smaller service areas of LP10 stations.¹¹⁶ Station separation requirements for these various purposes are described in paragraphs 68-72 and 114 and the separation distances are presented in the tables in the attached rules.

64. The extent of interference protection from LPFM stations to existing FM, LPFM and FM translator and booster service generally will be that afforded by minimum station separation requirements. These were designed to provide the same degree of interference protection that full-service stations provide each other.¹¹⁷ We have added a 20-kilometer buffer to the separations for protecting co-channel and first adjacent channel full-service stations. This buffer will help to protect FM radio facilities that were modified or upgraded in a manner that would create a short-spacing with an operating LPFM station. LPFM stations will not be required to eliminate interference caused to FM stations by their lawful operations. They will, however, be required to eliminate interference caused by operations that violate the terms of the station's authorization or the Commission's Rules; for example, radiation of excessive emissions outside of the station's authorized channel. LPFM station operators will also be required to respond to complaints of "blanketing" interference (*see* paragraph 113.). They will also be subject to international agreements regarding the elimination of interference to primary Canadian or Mexican broadcast stations. Until these agreements are modified, we believe it is appropriate to apply to LPFM stations the international provisions applicable to FM translators, which operate at comparable power levels.

65. *LPFM rights and responsibilities with respect to subsequently modified, upgraded or new full-service FM stations.* We are not adopting for the LPFM service many of the regulations applicable to full-service stations; for example LPFM stations will not be required to have a main studio. LPFM stations also will service much smaller areas than full-service stations. For these reasons, we do not believe that an LPFM station should be given an interference protection right that would prevent a full-service station from seeking to modify its transmission facilities or upgrade to a higher service class. Nor should LPFM stations foreclose opportunities to seek new full-service radio stations. Accordingly, operating LPFM stations will not be protected against interference from subsequently authorized full-service facility modifications, upgrades, or new FM stations. Because we will not protect LPFM from future FM facilities, we will not require LPFM applicants to meet minimum distance separation requirements to protect their service areas against interference received. However, as a guide to LPFM applicants, the attached rules includes minimum station separation distances necessary to protect an LPFM station's 60 dBu contour.

66. We expressed our desire to provide a measure of stability to operating LPFM stations. For

¹¹⁶ In this regard, LP10 stations will be authorized on a secondary basis to LP100 stations. However, interference protection from LP10 stations to LP100 stations will be limited to the extent of the protection afforded by the station separation requirements.

¹¹⁷ The minimum separation distances governing LPFM stations authorizations are based on the same protection criteria used to derive the minimum separations among full-service FM stations; *i.e.*, the same desired-to-undesired signal strength ratios applied at a station's protected contour and the assumption that a protected station operates at the maximum height and power permitted for its class.

this purpose, we will permit LPFM stations to continue operating even though they would cause interference within the protected service contours of a subsequent authorized FM service, including new stations and facilities modifications or upgrades of existing stations. In such situations, the LPFM operator would decide whether interference received to its service would permit the station to continue operating on its channel. However, we must make one exception to this policy. FM stations have a core responsibility to service their principal communities. Therefore, we will not permit an operating LPFM station to cause interference within a commercial or NCE FM station's 3.16 mV/m (70 dB) contour. This issue can only arise in connection with a subsequently filed full-service new station or modification application. If grant of such an application would result in predicted interference within the 3.16 mV/m (70 dBu) contour of the proposed station, the affected LPFM station will be provided an opportunity to demonstrate that interference is unlikely to occur within this contour due to, for example, terrain shielding. If the LPFM station fails to make a sufficient showing, it will be directed to cease operations upon the commencement of program tests by the commercial or NCE FM station.

67. We recognize that actual interference within the 3.16 mV/m contour might still be possible where the LPFM station has demonstrated that it is unlikely. In these circumstances, a complaint of actual interference must be served on the LPFM station and filed with the Commission, attention Audio Services Division. The LPFM station must suspend operations within twenty-four hours of the receipt of a complaint unless the interference has been eliminated by the application of suitable techniques and to the satisfaction of the complainant. An LPFM station may resume operations only at the direction of the Commission. If the Commission determines that a complainant has refused to permit the LPFM station to apply remedial techniques that demonstrably will eliminate the interference without impairment of the original reception of the full-service station, the licensee of the LPFM station will be absolved of further responsibility. As a practical matter we believe that in many cases involving FM station modifications or upgrades, interference to new or expanded areas will be offset by the conservative separation distances met by the LPFM station when it was initially authorized, particularly because of the 20-kilometer interference protection buffer.

3. Minimum Distance Separation Requirements

68. Background. The *Notice* tentatively concluded that minimum distance separation requirements for LPFM stations would provide the most efficient means to process a large number of applications while ensuring the overall technical integrity of the FM service. We proposed minimum spacings to protect full-service station operation on the same channel, first-adjacent channel and intermediate frequency (IF) channels. We proposed to exclude third-adjacent channel protection and questioned the need for second-adjacent channel spacing requirements. We noted that the use of a contour overlap methodology could significantly delay the implementation of the LPFM service because it would require substantial preparation on the part of applicants and the Commission and would increase the processing burden on the staff. The *Notice* included spacing tables for the proposed LPFM classes based on the interference protection ratios that underlie full-service radio separations and the assumption that stations operate at the maximum height and power for their station class. We sought comment on the accuracy of the specific values listed in these tables. In addition, we requested comment as to whether alternate approaches, including contour overlap methodology and/or more sophisticated terrain modeling programs, should be used at a later time, based on our initial experience in authorizing LPFM service.

69. Comments. No comments challenge any of the specific values listed in our proposed minimum distance separation tables. However, one commenter, Summit American, Inc. (Summit),

suggests an alternate methodology based upon a full service station's 44 dBu F(50,50) protected service contour, instead of the 60 dBu contour that defines the protected service contours for all NCE and many commercial stations. The 44 dBu contour is cited by Summit as the "extent of listenable service for the average listener," based upon the comments filed by USADR, one of the proponents of an in-band-on-channel digital audio broadcasting (IBOC DAB) system. In support of the definition of service beyond that protected by the Commission, Summit cites the Commission's FM translator interference rules which define interference as affecting an area where there is reception of "a regularly used signal."¹¹⁸ Although it does not calculate distance separations, the North Carolina Association of Broadcasters and the Virginia Association of Broadcasters (NCAB/VAB) echo Summit's concerns and argue that our separation requirements should protect actual service areas beyond protected contours.¹¹⁹ Several commenters urged either the use of a contour overlap methodology or a combination of contour overlap and separation requirements in order to accommodate the licensing of additional LPFM stations.¹²⁰

70. Decision. We recognize that a distance separation methodology will preclude new LPFM stations in some areas. However, we are not persuaded that the potential benefit of some additional stations is substantial enough to warrant the preparation of more complex and costly engineering exhibits based on contour protection and the resulting delays in the authorization of LPFM service. Therefore, we are adopting minimum separation requirements for the LPFM service as the means of protecting full service commercial and noncommercial educational stations.¹²¹ We also adopt spacing rules to protect FM translator stations and other LPFM stations, as well as a spacing table for LPFM stations operating on Channels 201 through 220 with respect to protection of TV Channel 6.¹²² As we proposed in the *Notice*, we will not establish minimum separations between LPFM stations that operate two or three channels apart. Special case spacing tables are also being adopted for Puerto Rico and the U.S. Virgin Islands. Additionally, appropriate spacings will be used for the approximately 20 "grandfathered superpowered" stations operating in the reserved band.¹²³ These spacing tables are set forth in the new rules, in Appendix A. LPFM applicants should be mindful of the fact that the minimum separation distances being adopted will not protect LPFM stations against interference from the full service stations, but are designed to

¹¹⁸ See Comments of Summit (August 2, 1999) at 2-4; see also Comments of USADR (August 2, 1999), Exhibit A at 3.

¹¹⁹ See Comments of NCAB/VAB (August 2, 1999) at vii-ix.

¹²⁰ See, e.g., Comments of Dr. C. William Chignoli at ¶ 3.

¹²¹ Unlike full service commercial and noncommercial educational stations, we are not adopting spacing requirements for stations removed three channels from the LPFM frequency (third adjacent channel), for reasons which will be explained in a subsequent section.

¹²² Currently, noncommercial educational stations operating in the reserved band (Channels 201 to 220, or 88.1 MHz to 91.9 MHz) must provide protection to reception of television channel 6 in accordance with the provisions of 47 CFR § 73.525. We have decided that LPFM stations should also protect reception of TV Channel 6. This issue is covered in greater detail in ¶ 114 below.

¹²³ Superpowered stations will be protected under the distance separations for the class of station that most closely approximates its facilities. This determination will be made based upon the stations 1 m V/m reference contour and the procedures for determining class listed in §73.211. A listing of correct reserved band superpowered stations is included in Appendix B.

prevent the LPFM station from causing interference to the protected service areas of full-service FM and other protected stations. However, as a guide to LPFM applicants, we are including in the rules a table giving the minimum separations necessary to avoid interference within the LPFM station service areas.

71. The minimum distance separation requirements that we adopt here for LPFM stations do not apply to full-service stations and FM translators. To prevent subsequently filed FM translator stations from causing interference to existing LPFM stations, we will expand the current FM translator interference protection rules to include a requirement that previously authorized LPFM stations be protected. As noted above, we will permit a full service station to modify its facility in a manner that reduces these separations to LPFM stations. However, in such cases we generally will not require the LPFM station to cease operation. Instead, the affected stations will have to bear any interference caused by facilities changes, such as an FM transmitter site move. However, so as to reduce the potential impact on the affected stations, the spacing rules we adopt today include a 20 km “buffer” for co-channel and first-adjacent channel LPFM-to-full-service-FM stations. This additional separation is included for two reasons. First of all, we recognize that the FM band is not static. For example, broadcast stations often change transmitter sites to provide better service to their communities and service areas. Same-station-class transmitter site moves are generally less than 20 km from the original site. Therefore, inclusion of the 20 km buffer spacing allows full-service stations room to move while also reducing the potential impact on existing LPFM stations. Second, and equally important, the additional separation affords the LPFM station an increased likelihood that its operation would not cause interference within a full service station’s community of license. This additional 20 km separation will apply only to the initial establishment of the LPFM station. Subsequent site moves by the LPFM station would either need to meet this distance separation requirement, or if the existing spacing were already less than this amount due to a prior site move by a full service station, the spacing could not be less than the currently existing separation.

72. *International Coordination Provisions.* We are also adopting provisions for LP10 and LP100 stations which lie within 320 km of the Canadian or Mexican borders, consonant with existing international agreements between the respective countries. We will apply the existing FM translator rule, 47 CFR § 74.1235, and current international coordination procedures to LPFM stations in these areas.¹²⁴ In the attached rules, we include distance separation tables that were intended to ensure compliance with the appropriate international agreements. We will adopt these tables to the extent that foreign stations are provided the appropriate protection. We have also derived similar tables for LP10 stations. We will only accept LPFM proposals that meet these distances. Such proposals will be coordinated as required by the pertinent agreements. In addition, LP10 and LP100 applicants in the U.S. Virgin Islands should be aware that international coordination may be required with the British Virgin Islands in some instances.

¹²⁴ Pursuant to § 74.1235, FM translators within 250 km of the Canadian border may be authorized if the 34 dBu F(50,10) interfering contour does not exceed 60 km in any direction from the transmitter site. FM translators located within 125 km of the Mexican border will be permitted to operate with an ERP not to exceed 50 watts, provided that the 34 dBu F(50,10) interfering contour does not extend more than 32 km toward the Mexican border, and the 60 dBu F(50,50) service contour cannot extend more than 8.7 km from the transmitter site in the direction of Mexico. FM translators located further than 125 km from the Mexican border, but less than 320 km from the border, may operate with the maximum ERP permitted for LP10 and LP100 stations, however, the location of the 60 dBu contour must lie more than 116.3 km from the Mexican border.

4. Second and Third Adjacent Channel Protection

73. Background. In the *Notice* we sought comment on the interference protection criteria to be used to govern the authorization of low power radio services. We stated that low power stations would be subject to existing co-channel and 1st-adjacent channel protections but that to the extent possible we were inclined to authorize low power service without any 2nd- and 3rd-adjacent channel protection standards.¹²⁵ We stated our belief that a strong case could be made for not requiring 3rd-adjacent channel protection to or from any of the contemplated classes of LPFM stations. We indicated that such an approach would entail little risk of interference to existing radio service. We noted that areas of potential interference to a full power station would be very small and occur only in the immediate vicinity of the low power transmission facility. We further indicated that such interference would generally only occur if the low power station were located at, or very near, the outer edge of the full power station's service contour where the full power station's signal is the weakest. We noted that 3rd-adjacent channel protection was eliminated for certain grandfathered and short-spaced full power stations in 1997.¹²⁶ On balance, we stated that creating opportunities for a new LPFM service should outweigh any small risks of interference to and from LP1000 and LP100 stations.¹²⁷

74. With regard to 2nd- adjacent channel protection, we noted that "grandfathered" short-spaced FM facilities were permitted to modify their facilities without regard to 2nd- and 3rd- adjacent channel spacings during the period from 1964 to 1987, and from 1997 to the present. We indicated that no interference complaints were received as a result of those modifications and found that the small risk of interference was outweighed by improved service. Similarly, we noted that we have been willing in the past to accept small amounts of potential 2nd- and 3rd-adjacent channel interference in the noncommercial FM service where such interference is counterbalanced by substantial service gains.¹²⁸ We sought comment on the state of receiver technology and the ability of receivers to operate satisfactorily in the absence of 2nd- adjacent channel protection. We also sought comment on the impact of eliminating 2nd- adjacent channel protection on the possible conversion of existing analog radio services to a digital mode, in particular with regard to in-band-on-channel (IBOC) technology. In this regard, we noted that one IBOC proponent, USA Digital Radio Partners, L.P. (USADR), suggested that 2nd-adjacent channel signals from analog FM stations in the existing radio environment would not pose an interference threat to its digital IBOC signal.¹²⁹

75. Comments. Three technical studies of FM receivers were filed in response to the *Notice*. These studies were: 1) *FM Interference Tests, Laboratory Test Report*, Thomas B. Keller, Robert B. McCutcheon, Consumer Electronics Manufacturers Association (CEMA), 1999, conducted under the

¹²⁵ See *Notice* at ¶ 42.

¹²⁶ See *Report and Order* in MM Docket No. 96-120, 12 FCC Rcd 11840, 11847-49 (1997) (*Grandfathering of Short-Spaced Stations R&O*).

¹²⁷ See *Notice* at ¶ 45.

¹²⁸ See *Educational Information Corporation*, 6 FCC Rcd 2207 (1991).

¹²⁹ See *Notice* at ¶ 47.

auspices of National Public Radio (NPR), CEMA and the Corporation for Public Broadcasting (CPB) (CEMA study); 2) *Technical Studies and Reports* filed by the National Association of Broadcasters (NAB study); and 3) *Receiver Evaluation Project* conducted by Broadcast Signal Lab, LLP for the National Lawyers' Guild, Committee on Democratic Communications (NLG study).¹³⁰ The Commission's Office of Engineering and Technology also completed a study of FM receivers that was placed in the record of the proceeding (OET study).¹³¹ In addition, NAB and CEMA filed supplementary technical information in their reply comments and a *Technical Analysis of the Low Power FM Service* by Theodore S. Rappaport (August 26, 1999) was submitted by the Media Access Project as part of its replies (Rappaport study).

76. *CEMA Study and Comments.* CEMA states that the purpose of its study is to document the sensitivity of consumer FM receivers to interference from other FM band signals. CEMA tested 16 consumer receivers, including 5 automobile radios, 5 "Home Hi Fi" tuners or receivers, 3 portable stereo systems, 2 portable radios and one "Walkman" radio. These receivers were tested under a number of conditions including co-channel, and 1st-, 2nd-, and 3rd- adjacent channel interference. CEMA asserts that its tests indicate that the FCC's proposal to eliminate 2nd- and 3rd- adjacent channel protections could result in significant interference to current and future FM service and threaten the deployment of future digital audio radio services. It therefore recommends that the 2nd- and 3rd-adjacent channel (and intermediate-frequency related) protections be maintained.

77. CEMA's test results are as follows:

- The current FCC co-channel desired to undesired (D/U) signal protection ratio of 20 dB results in an average audio signal-to-noise (S/N) ratio of 24 dB. To achieve what CEMA regards as the desired target audio quality level, *i.e.*, 45 dB, an additional 22 dB of protection is needed.¹³²
- The current FCC 1st-adjacent channel protection ratio of 6 dB results in an average S/N ratio of 36 dB. To achieve the 45 dB S/N level, an additional 11 dB of protection is needed. Tests also show potential analog-to-digital interference.
- The current 2nd-adjacent channel protection ratio of -40 dB results in an average S/N of 28 dB, while at a D/U ratio of -30 dB the average S/N ratio is 35 dB.
- The current 3rd-adjacent channel protection ratio of -40 dB results in an average S/N of 36 dB. Based on this finding, CEMA argues that the 3rd-adjacent protection should be maintained.

¹³⁰ The NLG study was funded by NLG, UCC, et al., and several others.

¹³¹ See *Second and Third Adjacent Interference Study of FM Broadcast Receivers*, OET Report FCC/OET TRB-99-1, prepared by William H. Inglis and David L. Means, July 1999.

¹³² CEMA target level was an audio Weighted Quasi-Peak (WQP) S/N ratio of 45 dB. It indicated that NPR had established the 45 dB audio S/N ratio for quality broadcasting on a previous project. See CEMA's *Laboratory Test Report* at p.1.

- Intermodulation tests show that the current intermediate frequency (IF) protection requirements are required to avoid both IF interference and local oscillator interference.¹³³

78. *NAB Study and Reply Comments.* As part of its comments, NAB submitted a technical study of FM receivers. In addition, it provided extensive tabular and geographical data illustrating what it believed would be the impact of various LPFM operations on existing FM broadcast service. NAB states that the receiver study was conducted to determine the susceptibility of modern FM receivers to co- and adjacent-channel signals and to determine the potential for interference to existing FM stations should a new low power FM service be authorized. NAB tested a total of 28 FM radios. This sample included 8 automobile, 5 component, 5 portable, 5 personal and 5 clock radios. In its reply, NAB argues that its sample is the only one of those used in the four studies that fairly represented all receiver categories.

79. In conducting its study, NAB chose a 50 dB audio S/N ratio as its performance measure. It considered interference to occur when the audio S/N ratio was degraded to this level. For radios that could not attain a 50 dB audio S/N ratio in the absence of an interfering signal, interference was judged to occur when the audio S/N ratio was degraded by a factor of 5 dB. NAB's test results demonstrate that receivers are most sensitive to co-channel interference and are progressively less sensitive to interference as the spacing between the desired and undesired frequencies increases. Based on its performance measure, NAB indicates that 15 to 22 of the 28 receivers in its sample would experience interference from signals on 3rd-adjacent channels at the current -40 dB D/U protection ratio.¹³⁴ NAB also indicates that 22 to 23 receivers in its sample would experience interference from signals on 2nd-adjacent channels. NAB therefore concludes that FM receivers generally do not perform up to the current FCC interference standards and that the Commission's assumptions that these restrictions could be eliminated for LPFM stations are incorrect.

80. In its reply comments, NAB also criticizes the receiver samples used in the other technical studies. It argues that only its study tested five different categories of receivers and a full price range of receivers in all categories. It also argues that OET and CEMA did not test clock radios and OET did not test personal radios, while CEMA only included one personal radio in its sample. NAB further asserts that while NLG tested all categories, its sample was too small to derive any general conclusions. NAB notes that all of the studies agree that automobile radios and, in some cases, component receivers, tend to be more effective at rejecting adjacent channel interference than clock, personal and portable radios.¹³⁵ However, NAB asserts that all of the studies confirm that modern FM receivers do not perform as well as the existing FCC protection criteria for 2nd- and 3rd-adjacent channel interference assume.

81. *NLG Study.* The NLG study examined a sample of 10 consumer FM radios. These radios were grouped in three broad categories as follows: 1) 3 higher priced radios (generally above \$150); 5 lower priced radios (\$20 to \$150); and 3) 2 factory installed car radios. Based on its test results, NLG observed that car radios and higher priced radios performed "far better than one would predict based on the FCC interference ratios" and that "substantial signal strengths were required to cause 2nd, 3rd, and 4th

¹³³ See Comments of CEMA at ii-iii, and *Laboratory Test Report* at pp. 1-7.

¹³⁴ See Comment of NAB Vol. 2 at 22-26.

¹³⁵ See Reply Comments of NAB at 8.

adjacent channel interference.¹³⁶ It also observed that the performance of lower priced radios tended to “straddle” the FCC interference protection standards.

82. NLG indicated that it was difficult to establish a definition of unacceptable interference, noting that its tests demonstrated that even the best receivers showed measurable, often imperceptible, increases in distortion in the presence of extremely low level undesired signals. It stated while the traditional practice is to establish a standard based on an absolute level of noise or distortion, such as a 3% increase in distortion or a S/N ratio of 30 dB, actual FM listening conditions are dependent on such variables as reception conditions, baseline radio performance without interference, and the various sounds and effects that interference can create. NLG stated that these variables make it difficult to scientifically derive a universal measure of unacceptable interference. NLG indicated that in testing radios, it found that the distortion and noise performance of each radio exhibited a “transition zone” where the radio would suddenly fail to receive the desired signal. It used these transition zones to make comparisons between radios, between forms of undesired signal modulation, and between interference from signals on adjacent channels.¹³⁷

83. The NLG study’s findings are as follows:

- More aggressive modulation of the undesired signal did not cause a significant increase in interference and that this was especially true for signals on 2nd, 3rd, and 4th adjacent channels. Less costly radios were more susceptible to modulation induced interference than more costly radios.
- The response of all radios tested for co-channel and first adjacent channel interference matched or exceeded the FCC interference protection ratios.
- Higher priced radios tend to withstand 2nd-adjacent channel interference better than lower priced radios. Higher priced radios and car radios withstood undesired signal levels higher than the FCC interference protection standards. The poorest performing radios were susceptible to 2nd-adjacent channel undesired signal levels that were as much as 50 dB lower than the levels that affected the best performers.
- 3rd-adjacent channel interference was slightly less challenging to most radios than 2nd- adjacent channel interference. Higher priced radios and car radios tended to fare better than lower priced radios.

84. *OET Study.* The OET study examined four broad categories of FM receivers: 1) small, inexpensive receivers with integral antenna; 2) small, moderate-cost receivers with antenna connection; 3) dash-mount automobile receivers; and 4) moderately expensive audio component receivers. In the OET

¹³⁶ See Executive Summary of the NLG study.

¹³⁷ NLG stated that while the transition zone in its distortion and noise tests did not pinpoint the conditions under which a listener would decide a signal is undesirable to listen to, it was the most identifiable characteristic common to the radios in its tests.

study, 21 FM receivers were tested. These included 5 small, moderate-cost receivers with antenna connections (portable and “boom-box” receivers), 7 automobile receivers, and 9 moderately expensive audio component receivers (“component” or home stereo type receivers). No inexpensive receivers with integral antennas were selected for the test sample because of the difficulty of providing test signals at accurately controlled levels to this type of device.¹³⁸ The OET study found that nearly all the receivers in the sample appear to meet or exceed the current 40 dB 2nd-adjacent channel protection requirement and to exceed the 3rd-adjacent channel protection by a wide margin. The OET study indicated that there was about an 8-10 dB improvement in overall performance with regard to interference immunity with regard to 3rd-adjacent channel signals as compared to 2nd-adjacent channel signals. The study also investigated the effect of reducing the maximum FM deviation on the interfering signal and found that a small improvement in 2nd- and 3rd-adjacent channel interference immunity can be expected for most receivers.

85. *Rappaport Study*. The Rappaport study¹³⁹ analyzes the other research, and concludes that LPFM will not cause unacceptable levels of service to existing FM broadcast stations. Rappaport indicates that the submitted technical studies support elimination of 2nd- and 3rd-adjacent channel protection for low power radio and that the small additional interference that would be induced by LPFM is miniscule in comparison to the already existing FM interference levels.¹⁴⁰ Rappaport also asserts that there was a clear bias in some of the technical studies to overstate potential LPFM interference. He indicates, for example, that NAB omitted automobile radios (which make up over 20% of the radios sold and over 44% of the radios listened to by the public) from its LPFM impact study and made up a “worst-case” radio based on measurements from different radios. Spectrum studies are also included that, according to Rappaport, indicate hundreds of LPFM stations may be deployed at power levels between one and 100 watts and serving tens of millions of listeners while having minimal interference impact on tens of thousands of listeners at most.

86. Rappaport states that NAB’s and CEMA’s tests appear to be designed to show how poorly FM receivers perform compared with the FCC interference protection ratios. He argues that these protection ratios were developed to ensure that stations were not built too close together, thereby providing acceptable reception by early generation of radios. He argues that today’s receivers drift less, have more reproducible electrical characteristics and better detection capabilities. He states that the fact that modern receivers do not meet the FCC protection ratios while still providing good consumer performance demonstrates that the protection ratios are overly stringent. Rappaport argues that FM receiver performance is based on actual real world environment, consumer expectations, and design/cost tradeoffs, and has nothing to do with how the FCC assigns station licenses.¹⁴¹ Rappaport argues that studies show that consumers are pleased with FM radios that have much less protection immunity than assumed by the FCC protection guidelines, and thus LPFM can be easily implemented since LPFM will introduce only a small amount of additional interference.

¹³⁸ See OET study at 3.

¹³⁹ Theodore S. Rappaport conducted this study on behalf of MAP. See ¶ 75.

¹⁴⁰ See Rappaport study at 2.

¹⁴¹ See Rappaport study at 12.

87. Rappaport notes that the FCC regulations require that out-of-band emissions on the 1st-adjacent channels be at least 25 dB below the main carrier but that in practice they are 30 dB below this level. He therefore suggests that if LPFM transmitters are certified for proper operation as suggested, there is no reason to expect interference except for blanketing conditions.

88. Rappaport indicates that the interference potential of LPFM stations is as follows:

LPFM Power (Watts)	Interference Radius (mi.)	Interference Area (sq. mi.)	Service Radius (mi.)	Service Area (sq. mi.)
1	0.04	0.01	1.1	4.0
10	0.14	0.06	2.0	12.1
100	0.44	0.60	3.5	38.5

89. Rappaport also argues that several conditions must exist for interference to occur, such as: the LPFM station must be at the coverage fringe of the incumbent station; the listener only wishes to listen to a station 2 or 3 channels above or below the LPFM station; and the listener is using a poor performing radio like a clock radio. However, even in these circumstances, Rappaport asserts that, in many instances, the listener may be able to eliminate the interference by adjusting the position of the clock radio or boom box for good reception. Rappaport further argues that the percentage of people experiencing interference from a low power station is much less (0.24% to 1.56%) than the people that would be served by a low power station.¹⁴²

90. Rappaport also criticizes several aspects of the receiver studies by NAB and CEMA. For example, he indicates that despite CEMA's claims, its receiver sample is not representative of the population of receivers in use. He also states that neither NAB or CEMA weighted their results to take into account the high proportion of listening (44%) that occurs in vehicles and that this failure over-emphasized the poor performance of certain other radios. Rappaport also does not believe that the quality criteria selected were appropriate. He notes that NAB chose a quality threshold that was impossible for the majority of its receivers to meet. He states that this suggests either the performance metric was unrealistic, or that there was an intentional effort to select inferior radios. He argues that choosing a fixed quality threshold creates testing and sampling problems. Rappaport argues that in an academic setting, the design of NAB's and CEMA's tests would be considered flawed and the results from such tests would be disregarded.¹⁴³ Rappaport also states that none of the four tests gives a complete picture of receiver performance because they all used only a limited range of desired input signals.

91. He indicates that while it is difficult to compare the different receiver studies, they

¹⁴² The percentage values cited reflect differences in LPFM power levels from 1 watt to 100 watts and are based on the average population density for the 60 cities studied in the *Notice*. Rappaport acknowledges that results will vary from city to city. Rappaport Study at 23-24.

¹⁴³ See Rappaport Study at 41.

demonstrate that car radios are much more robust to interference and are typically designed to meet the FCC 2nd- and 3rd- adjacent protection ratio (-40 dB D/U ratio). He indicates that other radios do not require this level of protection because, unlike automobile radios, they do not experience severe fading nor do they move rapidly towards an interfering signal.

92. Rappaport also criticizes NAB's mapping study. He states that this study seriously overcounted the number of people potentially affected by LPFM interference by counting affected people multiple times, using the worst possible receiver performance, inventing a "worst radio," and omitting interference from incumbent FM stations.¹⁴⁴ Finally, Rappaport indicates that IBOC proponents' concerns about 2nd-adjacent channel operation by LPFM are unwarranted.

93. Decision. We find that the record in this proceeding thus far, including the technical data and other studies submitted, supports a conclusion that any risk of interference from LPFM stations of 100 watts or less is small and, on balance, is outweighed by the benefits of this new service. We conclude that it is not necessary to apply 3rd-adjacent channel protection requirements to or from such stations. As discussed below, we believe that 100-watt LPFM stations operating on 3rd-adjacent channels will not result in significant new interference to the service of existing FM stations. Nor do we believe such operations are likely to have an adverse effect on digital IBOC signals.¹⁴⁵

94. In considering the issues relating to potential interference from LPFM operation, we first observe that all of the technical studies before us have certain limitations that make direct comparison of the study results difficult. Most significantly, all of the studies used different measures to determine when interference occurs and the quality of service to be protected. This fact explains somewhat the differences in the conclusions drawn by the various studies.¹⁴⁶ As NAB indicates, the significant differences among the studies were not in the measurements or in the performance of the radio receivers tested, but rather in the criteria used to decide whether the effects of an interfering signal caused harm to the desired signal.¹⁴⁷ We generally concur with this assessment.

95. Both CEMA and NAB used an audio signal-to-noise criterion to define acceptable FM service.¹⁴⁸ CEMA used a S/N value of 45 dB based on an earlier study by NPR. NAB chose a 50 dB S/N

¹⁴⁴ See Rappaport Study at 47-54.

¹⁴⁵ For example, in the *Notice* we referenced the view of USADR, an IBOC technology proponent, that "because of the design of the USADR IBOC system, digital reception is essentially not susceptible to 3rd-adjacent channel interference...." *Notice* Appendix C at ¶ 53.

¹⁴⁶ For example, CEMA and NAB, in their studies, conclude that 2nd- and 3rd-adjacent channel protections are needed and should be retained to protect against interference while the OET and NLG studies suggest that these interference protections may not be needed in certain circumstances.

¹⁴⁷ See Reply Comments of NAB, Appendix B, Pickholtz/Jackson Review at iii.

¹⁴⁸ In this regard, NAB criticizes the OET study for its use of harmonic distortion measurements rather than the more traditional S/N measurements employed in the NAB and CEMA studies. We believe that this criticism is unwarranted. Both S/N and harmonic distortion measurements can be used to satisfactorily measure interference (continued....)

criteria. NAB states that an audio S/N of 50 dB is necessary for interference-free reception.¹⁴⁹ NAB indicates that an estimate of the appropriate S/N can be made from the FCC co-channel desired-to-undesired (D/U) interference ratio of 20 dB. It states that the FCC co-channel protection ratio of 20 dB should produce an audio S/N ratio of approximately 50 dB for monophonic reception.¹⁵⁰

96. We do not find the audio S/N criteria suggested by either CEMA or NAB to be appropriate interference criteria for today's FM radio service. FM radio stations provide stereophonic not monophonic service. While a 20 dB D/U ratio yields a *monophonic* audio S/N of about 50 dB, according to an earlier study by NAB, for *stereophonic* transmissions, the 20 dB protection ratio yields an audio S/N of only about 30 dB.¹⁵¹ While NAB and CEMA may desire that FM radio service be protected to higher

to FM receivers. Both of these techniques quantify in an accurate and repeatable manner the amount of energy produced by the interfering signal in the receiver's audio output. However, there are advantages and disadvantages to each approach. While it is true, as NAB and their consultants have suggested, that harmonic distortion measurements are relatively less sensitive – that is, they produce a smaller change in measured results for a given change in undesired-to-desired signal ratio – the change in distortion is well within the resolution capability of the measuring equipment. On the other hand, distortion measurements provide an advantage over S/N measurements in that they measure the effect of interference on audio output in the presence of the desired signal's modulation, thus capturing any audio intermodulation effects that might be caused by interaction of the desired and interfering signals. S/N measurements, in contrast, require that the desired signal's modulation be removed to measure the interference component, thus missing any opportunity to capture this effect.

We also note that there are slight differences between the NAB and CEMA S/N measurements. In measuring S/N, the value actually measured is $(S+N)/N$. To make this measurement, one first establishes a reference by measuring the total level of the unimpaired desired signal at baseband and any system noise also at baseband, then removing the desired baseband signal and measuring the relative level of the baseband noise in the presence of the impairment. So the ratio actually reported is *unimpaired* S+N to *impaired* N. Because of shifts in the reference level noted when impairments are introduced (shifts in either direction, apparently caused by either receiver desensitization or the contribution of noise, or both), CEMA chose to re-establish the reference level in the presence of the impairment while NAB did not. Thus, CEMA's reported ratio is actually *impaired* S+N to *impaired* N.

NAB also implies that the test methodology used in the OET study is faulty. NAB makes this claim based on its assertion that the OET test results are significantly different from its results and the results of the other studies when those other results are interpolated to NAB's 50 dB S/N criteria. We find NAB's argument in this regard specious and unpersuasive. Interpolating all test results, except one, to a given criteria and then commenting that the one test result not interpolated is different does not call into question OET's test methodology in our opinion but rather NAB's analysis. In this regard, a direct comparison between OET's test results at 3% distortion and measured and interpolated results at 50 dB S/N is not appropriate and provides no basis for calling into question the validity of OET's tests. We note that OET measured the S/N performance of one of the receivers in CEMA's sample and obtained the same results as CEMA.

¹⁴⁹ See Comments of NAB Vol. 1 at 28.

¹⁵⁰ NAB also cites ITU Recommendation 641, which specified an audio S/N of 50 dB assuming that receivers can produce a S/N of 56 dB without interference, in support of its S/N choice of 50 dB. Recommendation 641, "Determination of Radio-Frequency Protection Ratios for Frequency-Modulated Sound Broadcasting," 1986, ITU, Geneva, Switzerland. See Comments of NAB Vol. 2 at 8.

¹⁵¹ See NAB's Subjective Evaluation of Audio Degraded by Noise and Undesired FM Signals, Lawrence C. (continued...)

levels of service, based on NAB's earlier study and the results of the technical studies before us herein, we do not believe that the existing interference protection standards, *e.g.*, the 20 dB co-channel interference requirement, generally provides for protection to such levels.

97. We also believe that accounting for both stereo performance and the FCC's current interference protection standards explains why many of the FM receivers tested did not meet the criteria chosen by CEMA and NAB, or did exhibit performance degradation higher than NAB's and CEMA's expectations. For example, the majority of receivers (17 of 28) chosen by NAB did not meet its 50 dB S/N criteria with *no* interference present and with the "strongest" desired signal.¹⁵² Similarly, CEMA reports that none of its sample receivers "came near meeting the target S/N" of 45 dB at the FCC's co-channel standard of 20 dB.¹⁵³ NLG, in its study, states that "receiver performance data show that all receivers produce some measurable increase in noise at undesired signal levels below the FCC ratio reference levels." We therefore fail to see how 50 or 45 dB can be an appropriate measure when most radios do not perform at this level, even in the absence of any interference as was the case in NAB's tests. We have no reason to find that the vast majority of current FM receivers do not provide satisfactory service to the public and therefore believe that a lower value or measure of acceptable performance would be more appropriate for interference purposes. We believe that this is especially the case if we are to consider all categories of FM receivers, including lower cost models, such as clock, portable and personal units, as suggested by some of the commenting parties.

98. Another limitation of the studies was the relatively limited sample of FM receivers examined. The relatively small samples examined in each of the studies makes it difficult to draw statistical inferences with regard to the general population of FM receivers. However, the studies do clearly indicate that current FM radios exhibit a wide range of performance with regard to audio reception quality and interference rejection. While a 50 dB, 45 dB, or even 40 dB reception quality level, as suggested by Rappaport, may be expected for certain types of radios, such as automobile radios and home stereos, clearly from the data presented these levels of performance are not the norm for other types of radios, such as portable, personal and clock radios. In addition, all of the studies found that automobile radios and home stereo/component receivers tend to be more effective at rejecting adjacent channel interference than clock, personal and portable radios.¹⁵⁴ Based on our examination of the studies, we find that automobile radios and home stereo/component receivers generally are able to provide -40 dB rejection of 3rd-adjacent channel signals and therefore generally will provide acceptable service in the absence of 3rd-adjacent channel protection. We also recognize that some poorer quality receivers may experience some

Middlekamp, November 17, 1982.

¹⁵² Only 3 of the 28 receivers met the criteria of providing a S/N of 56 dB in the absence of interference. In addition, in its reply comments, NAB argues that the one of the only classes of receivers that come close to meeting its proposed 50 dB standard, *i.e.*, automobile radios, should be excluded and treated separately because they operate in a mobile environment and therefore require higher protection. NAB argues that an additional 30 dB of margin is needed in the protection ratios to account for multipath fading and other considerations of mobile operation. See Reply Comments of NAB at 15-16.

¹⁵³ CEMA also indicates that its sample did not meet its target S/N at the FCC's 1st-, 2nd-, and 3rd-adjacent channel protection ratios.

¹⁵⁴ See Reply Comments of NAB at 8.

additional interference as a result of eliminating the 3rd-adjacent channel protection for LPFM stations. We note, however, that these classes of radio may also experience some degree of interference from co- and 1st-adjacent channel stations operating within the existing protection requirements. We also believe that consumers generally understand that there are performance differences among the classes of radios and that they accept the fact that lower cost radios may provide more limited service capabilities, as suggested by Rappaport. We therefore believe that our decisions with regard to LPFM service should not be constrained solely by the performance limitations of lower cost radios any more than we should use those radios to redefine existing FM radio service. In this regard, we believe that good engineering practice suggests that evaluations of the potential impact of new interference from low power FM stations should not be based on either the worst or best performing radios.

99. The NAB study generally bases its analyses on median receiver performance, and the CEMA study generally uses average performance to describe its results. In addition, since the studies use different measures of when interference occurs, it is difficult to directly compare the test results. Nonetheless, we believe that there is sufficient consistency in the study results to support some decisions in this matter, particularly with regard to the need for 3rd-adjacent channel protection.

100. The OET and NLG studies generally conclude that FM receivers provide for adequate rejection of interference on 2nd- and 3rd-adjacent channels.¹⁵⁵ The OET study, for example, finds that nearly all receivers in its sample appear to meet or exceed the 2nd-adjacent channel protection and exceed the 3rd-adjacent channel protection criteria by a substantial margin, i.e., exceed the -40 dB criteria by 8 to 10 dB.¹⁵⁶ On the other hand, CEMA and NAB argue that their studies show that these adjacent channel protections should be retained. A careful review of CEMA's results, however, shows that CEMA's median receiver provides about -40 dB of rejection of 3rd-adjacent channel interference and that the average 3rd-adjacent channel performance is about 3 to 7 dB better than 2nd-adjacent channel performance for its sample.¹⁵⁷ Similarly, while we question the validity of NAB's interference criteria, its test results also show 3rd-adjacent channel performance to be substantially better than 2nd-adjacent (*i.e.*, 8 to 10 dB) -- the

¹⁵⁵ The OET study did not, however, include small, inexpensive receivers with integral antennas, such as clock and personal radios. Similarly, the NLG study employed a sample of only 10 radios and, as pointed out by NAB, it is difficult to draw general conclusions for the FM receiver population from such a small sample.

¹⁵⁶ The above conclusions of the OET report that "nearly all the receivers in the sample appear to meet or exceed the 40 dB 2nd-adjacent channel criterion and exceed the 3rd-adjacent channel protection criterion by a substantial margin" reflect measurements taken at the 1% distortion level. NAB, in its reply comments, asserts that for the OET study, interference was considered to exist when the desired audio from the receiver contained 3% or more distortion than with no interfering signal present. NAB states that it assumes this to be the case because if 1% distortion were the interference point there would be no point in collecting 3% data. NAB's assumption is incorrect. The 1% and 3% levels were merely two points at which data were collected. The 1% level corresponds to a point at which most listeners would not be able to perceive any degradation in performance. On the other hand, the 3% distortion represents a level at which most listeners would perceive a difference in the received signal. The 3% distortion level was also chosen after informal consultations by FCC staff with the test firm hired by NAB, which stated that it recommended this value as a test point.

¹⁵⁷ CEMA reported average rather than median performance. Its findings showed an average S/N ratio of 34 dB at the -40 dB D/U level.

same margin of improvement as found in the OET study.¹⁵⁸

101. We also find that the area in which any additional interference would be likely to occur from an LPFM station operating on a 3rd-adjacent channel at maximum facilities of 100 watts and antenna height of 30 meters above average terrain would be very small. For example, even using NAB's median receiver performance test results for its three "worst" FM radio categories, *i.e.*, clock, personal and portable, we find that the area where such receivers could potentially experience degradation from interference is small, generally 1 km or less from an LPFM antenna site. This interference analysis is shown in the following table:

102. LPFM Potential Interference Radius¹⁵⁹

Receiver Category	Desired Signal Level		
	-45 dBm	-55 dBm	-65 dBm
Clock	0.3 km	0.7 km	2.1 km
Portable	1.0 km	0.9 km	1.0 km
Personal	0.4 km	0.5 km	0.5 km

103. Further, we believe that this analysis provides a conservative estimate of actual interference potential of LPFM given NAB's performance criteria and the fact that NAB's sample included some of the poorer performing radios among the four studies.¹⁶⁰ In addition, as pointed out by Rappaport

¹⁵⁸ NAB's study shows median receiver performance values at different desired signal levels. These median values are as follows:

Desired Signal Level	Median 2 nd Adjacent	Median 3 rd Adjacent
-45 dBm	-17.0 dB	-26.8 dB
-55 dBm	-23.7 dB	-32.0 dB
-65 dBm	-30.5 dB	-39.7 dB

¹⁵⁹ These interference estimates are calculated in accordance with the FM engineering charts in Section 73.333 of the rules, 47 CFR § 73.333.

¹⁶⁰ As indicated above, NAB defines interference as a degradation in audio S/N performance of 5 dB. Using this measure, all five personal radios and two of the five portable radios tested by NAB could be considered to provide no service at all beyond the -45 dBm level, since they all exhibited a greater than 5 dB degradation in performance when the desired signal was reduced below -45 dBm even with no interference present. Therefore, it is questionable whether interference estimates for these radios using NAB's methodology are meaningful.

and others, whether interference in fact occurs to FM listening is dependent on a number of factors, besides the performance of the FM receiver. These include, among other things, the actual reception conditions, such as the location and position of the radio, the frequency and location of both the desired and undesired stations, and the type of program material being transmitted and received. CEMA notes, for example, that when the desired signal is modulated with rock music the interference was masked in its 2nd- and 3rd-adjacent channel subjective tests.¹⁶¹

104. Accordingly, we find that 100-watt LPFM stations operating on 3rd-adjacent channels will not result in significant new interference to the service of existing FM stations. Furthermore, we find that any small amount of interference that may occur in individual cases would be outweighed by the benefits of new low power FM service. With regard to 2nd-adjacent channel protection requirements, it appears that the risk of interference from LPFM signals on 2nd-adjacent channels may be somewhat higher. We find that this would also be true with regard to LPFM stations at power levels higher than 100 watts and antenna heights higher than 30 meters. Therefore, we will retain 2nd-adjacent channel protection requirements.

5. Other Technical Standards and Provisions

105. Background. In the *Notice*, we sought comment on which Part 73 technical operating requirements for full-service stations should be applied to LPFM stations. In general, most commenters stated that, although some requirements must remain to ensure a quality service, the LP100 and LP10 stations should be held to less stringent requirements than full service stations. While we do not want to overly burden LPFM operators, we nevertheless believe that the technical rules set forth below should apply to the LPFM stations. By doing so, we will not only facilitate technically sound LPFM operations and the use of available equipment, but will permit LPFM stations to engage in services such as those obtained through the multiplexing of FM subcarriers. There are some requirements applicable to full-service stations which we believe can be relaxed or not applied. Accordingly, we will apply certain rules to LP10 stations that apply to existing stations that operate with ten watts transmitter power output (TPO) or less.¹⁶² The following paragraphs set forth the principal technical requirements and provisions for LPFM stations. These technical matters were generally non-controversial to parties who filed comments in this proceeding. Other technical requirements for LPFM stations are given in the rules appendix.

106. *Power/Height restrictions.* Several commenters expressed the desire to operate facilities at heights in excess of those specified as the maximum/minimum facilities for the class. This would enable stations to use existing structures at sites where the localized elevation is such that the 30 meter HAAT would be exceeded regardless of the height of the structure. One commenter, the Arkansas Broadcasters

¹⁶¹ See CEMA study at 6.

¹⁶² In contrast, *effective radiated power (ERP)* refers to the power which is radiated from the antenna. ERP incorporates the transmission line loss – the power loss of the cable used between transmitter and antenna – and the gain of the antenna. Thus, it is possible for the effective radiated power to be greater than the transmitter power output (TPO), by using an antenna with a gain greater than 1.0. For simple systems, the ERP = TPO x (antenna gain) x (efficiency of transmission line), where the antenna gain and efficiency are decimal numbers (not in decibels = dB). In most cases, the antenna manufacturer or the transmission line manufacturer should be able to provide this information

Association, believes we should impose strict maximum height restrictions on LPFM stations since, due to the nature of the Commission's F(50,10) interference prediction curves, equivalent 1 mV/m (60 dBu) reference contours do not always guarantee proportionally sized interfering contours.¹⁶³ Although Arkansas Broadcasters is correct in this regard, we are not persuaded that this is of sufficient magnitude to warrant strict height restrictions on LPFM stations. Rather, we will allow LPFM stations to exceed the class-defined upper height restrictions as long as there is an offsetting decrease in the station's effective radiated power. For this purpose, we will authorize equivalent height and power combinations to produce the 60 dBu contour generated by the maximum and minimum permitted facilities for the LP100 and LP10 stations; *e.g.*, the maximum LP100 facilities of 100 watts and 30 meters produce a 60 dBu contour at a distance of 5.6 km.¹⁶⁴

107. We recognize that computing a station's HAAT requires access to terrain database and numerous calculations.¹⁶⁵ Therefore, in order to streamline the application process, the staff will utilize a computer program to calculate the antenna HAAT based upon information provided by the LPFM applicant (the coordinates of the proposed antenna, the site elevation above mean sea level, and the antenna height above ground level (AGL)). If the calculated HAAT is less than or equal to 30 meters, the LPFM station will be authorized to operate with any ERP within the maximum and minimum limits for its class.¹⁶⁶ If the HAAT is calculated to exceed 30 meters, the permit will specify maximum and minimum ERP values that would produce the reference 60 dBu contours.¹⁶⁷

108. *Directional antennas.* Under our current rules, full service FM stations may specify directional antennas to avoid interference to other stations. Such facilities are subject to several strict installation and pattern requirements.¹⁶⁸ Processing these applications is staff intensive. Construction permits for directional facilities generally contain numerous conditions. Since we are relying on a

¹⁶³ See Comments of ABA at 14.

¹⁶⁴ As a practical matter, this allowance will limit LP100 stations to 450 meters HAAT and LP10 stations to 100 meters HAAT. These HAAT values would produce equivalent maximum class contours for stations operating with 1 watt ERP, the lowest value we will authorize.

¹⁶⁵ Antenna height above average terrain (commonly abbreviated HAAT) does not refer to the height of the antenna above ground level. The antenna height above average terrain is a measure of the height of the antenna relative to a generated average terrain level. The average terrain level is computed by considering the terrain along 8 or more evenly spaced radials centered at the antenna site. For each of these radials, the ground elevations at 50 or more evenly spaced points are determined and averaged. Then, the radial terrain averages are averaged together to determine the height of the average terrain above mean sea level (AMSL). The antenna height above average terrain (HAAT) is the difference between the height of the antenna (AMSL) minus the average height of the terrain AMSL.

¹⁶⁶ The Commission's prediction of coverage methodology does not account for HAAT's below 30 meters. In such cases, 30 meters is assumed when contour distances are determined.

¹⁶⁷ We will specify ERP to the nearest watt. This differs slightly from the full service FM rounding procedures. See 47 C.F.R. § 73.212.

¹⁶⁸ See 47 C.F.R. § 73.316.

minimum distance separation methodology – rather than a contour-based approach -- to provide interference protection, we see no need for stations to employ directional antennas. Accordingly, to simplify applicant requirements and facilitate application processing and ensure that service can be implemented as expeditiously as possible, we will not authorize directional antennas for LPFM stations.

109. *Transmission standards.* The *Notice* asked whether different transmission standards should be employed for an LPFM service; for example, whether the bandwidth could be reduced from 200 kHz to some smaller value as a means of reducing the potential interference from LPFM stations. To ensure technically sound station operations, we have decided to apply to LPFM several transmission standards presently in use for commercial and noncommercial educational FM stations. In most cases, these standards will be met through the use of type certified equipment without need for further adjustment by the LPFM licensee. LPFM stations will be required to adhere to the 200 kHz channel bandwidth applicable to full service stations, as well as the out-of-channel signal attenuation requirements in 47 CFR § 73.317, the center frequency drift limits in 47 CFR § 73.1545(b), and the limits on modulation in 47 CFR § 73.1570(a) and (b). In addition, LPFM stations may, at their option, engage in monophonic or stereophonic broadcasting. LPFM stations may also transmit additional information via inaudible subcarriers during those periods when the audible FM signal is on the air.

110. *Antenna polarization:* We will permit LP10 and LP100 stations throughout the FM band to use horizontally polarized, vertically polarized, or circularly or elliptically polarized antennas, as desired by the applicant. We note that vertical-only polarized antennas have been used in the noncommercial educational FM service to protect reception of TV Channel 6 for nearly 15 years now, without adverse impact. This will afford LPFM stations a wider selection of antennas for use at LPFM stations.¹⁶⁹

111. *Protection of AM radio radiation patterns:* LPFM applicants should also be aware that antenna structure construction within 3.2 km (2 miles) of a directional AM station or 0.8 km (0.5 miles) of a nondirectional AM station will subject the LPFM station to the requirements of 47 CFR §73.1692. This section requires the affected AM station to make before and after measurements of its installation to insure that the new antenna structure does not adversely affect the signal pattern through reflections of the AM signal produced by the new structure. The LPFM applicant is financially responsible for conducting the measurements and any corrective measures that may need to be undertaken. The measurements can be quite expensive to conduct, and correction even more so. Therefore, we encourage LPFM applicants to locate the antenna more than 3.2 km from any directional AM station, or more than 0.8 km from any AM nondirectional station.¹⁷⁰

112. *Tower Height/FAA Coordination Requirements.* Any proposal before the Commission that specifies an antenna supporting structure in excess of 61 meters above ground level is subject to the Commission's requirements for antenna structure registration requirements. Certain lower structures

¹⁶⁹ Manufacturers of suitable antennas can provide assistance in determining the antenna gain of a particular antenna, and also the input power needed to emit a specified effective radiated power.

¹⁷⁰ LPFM applicants may use the AM Query on the Internet to determine whether an AM station lies within 3.2 km of a particular set of coordinates. The query may be accessed at <http://www.fcc.gov/mmb/asd/amq.html#sprung5>.

located close to air facilities are also subject to these requirements.¹⁷¹ All structures subject to registration requirements must obtain an FAA Determination of No Air Hazard for the structure before the tower may be registered. In a letter dated June 1, 1999, the FAA expressed some concern regarding the impact LP1000 stations may have upon nearby air facilities. No specific questions were raised regarding the lower powered facilities. Since we are not authorizing an LP1000 service at this time, we will continue determining compliance with our tower registration requirements in the manner set forth above.

113. *Blanketing Interference.* For one year after the commencement of transmissions with new or modified facilities, all FM stations are required to take remedial action to resolve blanketing interference complaints occurring within the immediate vicinity of the antenna site.¹⁷² A station's specific blanketing interference radius is defined by our rules.¹⁷³ The blanketing contour for an LP100 station would extend approximately 125 meters from the transmitter site and a 10-watt LP10 blanketing contour would extend 39 meters. Thus, the blanketing area of either type of station is very small. We conclude that LPFM stations should be required to resolve blanketing interference complaints in the same manner applicable to full power stations. Although the potential for blanketing interference from LPFM stations may be quite limited, affected parties are entitled to relief from such interference caused by a new source of radiation, whether it is a full-power commercial station or a new low power community broadcaster. Accordingly, we will apply the requirements in § 73.318 to all LPFM stations.¹⁷⁴

114. *Potential Television Channel 6 Interference.* Presently, noncommercial educational FM applicants are required to consider the impact of their operations on reception of television Channel 6, which operates on a frequency band (82 to 88 MHz) just below the FM band (88 to 108 MHz) in accordance with the provisions of 47 CFR § 73.525. Determining the affected interference area pursuant to this section usually requires complex calculations and detailed contour studies. Given the very limited potential for interference caused by LPFM stations, in order to simplify processing and lessen the filing burden on applicants, we will utilize a spacing table to protect TV Channel 6 stations. The values given in the table utilize the protection ratios of § 73.525 and worst case facilities for the TV Channel 6 and the

¹⁷¹ For towers less than 61 meters in height, FAA approval is not required if the structure is more than eight kilometers from the nearest air facility. If the structure is within eight kilometers of an air facility, FAA notification is not required if the height of the structure, when considered along with the distance to the air facility and elevation of the antenna site, satisfies a "slope" calculation. (These criteria are independent of the ERP of the facility.)

¹⁷² High strength RF signals, which emanate from the antenna before they are dissipated over space, are capable of covering, or blanketing, the reception of all other FM stations and possibly TV stations and other electronic communications, regardless of frequency, by simply overpowering the receiver's tuner. Thus, the name "blanketing interference."

¹⁷³ See 47 C.F.R. § 73.318.

¹⁷⁴ To a degree, Section 73.318 lacks detail regarding the exact requirements of licensees. However, over the years a clear interpretation of the rule has been developed by the Mass Media Bureau. The Commission proposed to codify this policy further in MM Docket 96-62, which is currently pending. See *In the Matter of Amendment of Part 73 of the Commission's Rules to More Effectively Resolve Broadcast Blanketing Interference, Including Interference to Consumer Electronics and Other Communications Devices*, 11 FCC Rcd 4750 (1996). We will apply the rule in accordance with the established precedents.

LP10 and LP100 stations.¹⁷⁵ On this basis, we do not anticipate that interference will occur. However, we will require LPFM applicants to correct any complaints of interference caused to Channel 6 reception in accordance with our blanketing interference requirements (as are Channel 6 complaints regarding full service stations). In most cases, this will require the installation of simple filters on affected television sets. LPFM applicants will not be required to coordinate their proposals with any potentially affected Channel 6 television station.

115. *Radio Reading Services.* Several radio reading services have expressed concerns about interference from LPFM stations to their service to persons who are blind or who have low vision.¹⁷⁶ Programming provided by radio reading services is transmitted on subcarrier frequencies of a broadcast station, which are not audible on a standard radio. As the subcarrier frequencies are transmitted within the 200 kHz bandwidth of the broadcast station, they receive the same protection from interference as does the main broadcast programming. Thus, insofar as the transmitted subcarrier signal is concerned, there will be no increase in interference. With respect to subcarrier receivers used by the radio reading service audience, the Commission does not set technical standards for radio receivers. Thus, we cannot consider whether additional interference might affect SCA reception in the vicinity of an LPFM station, or whether different receiver construction could reduce possible interference. However, we note that the 20 km buffer between LPFM stations and co-channel or 1st-adjacent channel full service FM stations adopted in this *Order* should afford additional protection to subcarrier reception than was proposed in the *Notice*.¹⁷⁷

116. *Transmitter Certification.* In the *Notice*, we tentatively concluded LPFM stations should utilize only transmitters deemed “type certified” by the Commission’s Office of Engineering and Technology (OET) to ensure the integrity of the FM radio spectrum. Type certification would prevent the use of transmitters with excessive bandwidth or modulation, spurious emissions, excessive power output, or insufficient frequency stability, which could cause interference to other existing stations. A large majority of commenters concurred with this conclusion. A few licensed amateur radio operators felt that they should be exempt from this requirement, asserting that many amateurs were capable of creating suitable equipment.¹⁷⁸ However, we remain concerned about the significant potential for interference caused by non-type certified transmitters, particularly given the interference-protection standards we are adopting. Nor do we believe that type certification of equipment by the manufacturer will add appreciably to the cost of equipment for a low power broadcast radio station. Accordingly, we will adopt the certification requirement as proposed in the *Notice*.¹⁷⁹ We emphasize that the use of non-type certified transmitters will not be tolerated. Use of non-type certified transmitters will subject the licensee to enforcement action including, but not limited to, fines.

¹⁷⁵ This methodology is similar to that used in the FM translator rules. See 47 C.F.R. § 74.1205. The FM translator table was used in Appendix D of the *Notice*, “Spectrum Availability Analysis.”

¹⁷⁶ See, e.g., Comments of National Association of Radio Reading Services at 1.

¹⁷⁷ See ¶ 65, adding 20 km buffer.

¹⁷⁸ See, e.g., Comments of John Benjamin and Charles Coplein at 6; Comments of Spencer Graddy Clark at 6.

¹⁷⁹ See 47 C.F.R. § 2.907.

117. *Unattended Operation.* We anticipate that many LPFM stations will be run as “attended operations,” since the transmitter sites will be located at the source of program origination. However, LPFM stations may also be operated in “unattended” mode. During these times, there may be no personnel at the studio or transmitter site to monitor operation. LPFM stations that will operate unattended will be required to advise the Commission by simple letter of the unattended operation, and provide an address and telephone number where a responsible party can be reached during such times. The responsible party must be able at all times to turn off the transmitter within 3 hours of receiving notice from the FCC that the equipment is not functioning properly. In addition, we encourage the use of monitoring equipment that can automatically shut off the transmitter within 3 hours if a fault (such as operation at excessive power operation or center frequency drift) occurs.¹⁸⁰ Finally, during periods when the LPFM station is not transmitting programming on its regular channel, the transmitter must be turned off.

118. *Station Logs.* Station logs provide a mechanism for verifying proper operation of a station, as they require the licensee to examine the operation before making a log entry. Logging requirements for LPFM stations will be minimal. The station log for LPFM will contain only the following entries:

- 1) Daily observation of proper function of tower obstruction lighting (if required by Section 17.47 of the Commission’s Rules);
- 2) Dates and a brief explanation regarding station outages due to equipment malfunctioning, servicing or replacement;
- 3) Any operation not in accordance with the station license;
- 4) Receipt of weekly EAS (Emergency Alert System) test;
- 5) Name of person making the entry.

119. These minimal requirements will not impose any significant burden on LPFM licensees. Except for any required daily tower lighting checks, entries need only be made when necessary. Logs must be retained for two years from the date of the last entry, and station logs must be made available to FCC personnel upon request.

120. *Environmental Requirements.* As with any applicant for a Commission license, an LPFM proponent will have to certify compliance with the environmental requirements of Section 1.1307 of our rules. In order to facilitate the preparation and processing of LPFM applications, we will simplify the environmental compliance worksheets included in the current FCC Form 301 to account for the low operating power of LPFM stations.

121. *Radio Astronomy Installation Notifications.* Low power FM broadcast stations will be required to coordinate with and provide protection to the radio quiet zones at Green, West Virginia and at Boulder, Colorado, as is required for full service FM stations by Section 73.1030. In addition, low power FM applicants in Puerto Rico will need to coordinate with Cornell University regarding the radio coordination zone on that island. This requirement is necessary to ensure that research work at these

¹⁸⁰ For additional information about unattended operation, please refer to the information sheet *Unattended Operation of Radio and Television Broadcast Stations*, which may be retrieved on the Internet through the address <http://www.fcc.gov/mmb/asd/decdoc/engrser.html#UNATTEND> .

installations will not be disrupted. Because of the low power and antenna height of LPFM stations, we anticipate that this requirement will affect very few applicants.¹⁸¹

F. Application Processing

1. Electronic Filing

122. Background. The Commission recently mandated the electronic filing of broadcast applications after a transition period of six months from the date that each form becomes available for filing electronically.¹⁸² Likewise, we proposed in the *Notice* to require that LPFM applications be filed electronically.¹⁸³ We stated that mandatory electronic filing could speed the introduction of LPFM service by enabling the staff to process more quickly and efficiently the large number of LPFM applications that we expect to receive. In addition, we indicated that electronic filing software could be designed to assist applicants with technical issues related to their applications, such as determining what frequencies are available based on current information in the Commission's database. We requested comment as to whether Internet access is sufficiently universal to warrant mandatory electronic filing of LPFM applications.

123. Comments. Commenters that addressed the matter generally support the use of electronic filing, but are divided as to whether it should be mandatory. Metro Detroit Broadcasting Corporation (Metro) opposes mandatory electronic filing on the ground that it would disadvantage minority groups due to a "significant race-gap" in Internet access.¹⁸⁴ In addition, Metro argues that permissive electronic filing would provide time for interested parties to develop proficiency in using an electronic system.¹⁸⁵ Andrew Morris argues that electronic filing should be required due to the threat of a backlog of paper-filed LPFM applications that would have to be entered manually into the Commission's database. However, several commenters express concern that electronic filing is untried and may delay the introduction of LPFM service. The Oklahoma and Texas Departments of Transportation comment that, based on their experiences renewing licenses and correcting addresses using the Commission's Web site, an electronic filing system is likely to be reasonably accessible and easy to use.¹⁸⁶ Several commenters urge that, regardless of whether electronic filing is required, LPFM filing procedures should be as simple and

¹⁸¹ In addition, as also detailed in § 73.1030, the Mass Media Bureau staff will coordinate action with the Enforcement Bureau if an application is predicted to place a signal strength of 80 dBu or more over an FCC monitoring station. As with current practice, there is no pre-filing notification requirement.

¹⁸² 1998 Biennial Regulatory Review—Streamlining of Mass Media Applications, Rules and Processes, Report and Order in MM Docket No. 98-43, 13 FCC Rcd 23056 (1998) ("*Streamlining R&O*").

¹⁸³ *Notice*, 14 FCC Rcd at 2504-06.

¹⁸⁴ Comments of Metro at 12-13. Metro also express concern that mandatory electronic filing would create barriers for small businesses. Comments of Metro at 12. The eligibility criteria we are adopting for LPFM applicants, however, will exclude for-profit businesses. *See* ¶ 17-20.

¹⁸⁵ Comments of Metro at 13.

¹⁸⁶ Comments of the Oklahoma and Texas Departments of Transportation at 6.

inexpensive as possible.¹⁸⁷

124. Decision. We anticipate that electronic forms will be made available via the Commission's World Wide Web site prior to the opening of the first LPFM filing window. Based on our consideration of the record, however, we will not adopt a mandatory electronic filing system for LPFM application forms at this time. Rather, assuming availability of the forms, we will make electronic filing permissive for the first LPFM filing window, which we intend to open for LP100 stations shortly after the effective date of this *Order*. Whether electronic filing is permissive for the second window that we anticipate opening for LP10 stations, as well as for any subsequent LPFM filing windows, will be resolved at a later date and will depend on several factors, including our experience with both electronic and paper filing during the first LPFM window and the time that elapses between the first and second windows.

125. We recognize that, as some commenters point out, there may be disparities among potential LPFM applicants in terms of Internet access and/or computer skills. We believe that making electronic filing permissive at this time will accommodate applicants that might be disadvantaged by mandatory electronic filing. We previously have discussed the significant advantages of a mandatory electronic filing system in terms of realizing savings and efficiencies. We do not believe that electronic filing would necessarily constitute an undue burden or expense for potential LPFM applicants, as the costs of computer and modem equipment continue to fall, and Internet access increasingly is becoming available at minimal cost commercially and at public institutions such as libraries. In addition, the Commission has made, and will continue to make, great efforts to create a simple, user-friendly electronic filing system.¹⁸⁸ However, at present we are determined to be cautious with the first applications for a new service filed by applicants whose resources and familiarity with Commission processes may be very limited. We will reassess our electronic filing decision after our experience during the first filing window. We can better determine at that time whether the first filing window has provided a reasonable opportunity for interested parties to understand and arrange for Internet access and familiarize themselves with our Web site and electronic filing system. We can then determine whether the public interest benefits of mandatory electronic filing will outweigh any difficulties encountered or inequities expected, and decide whether electronic filing will remain voluntary or be mandated for use by all.

126. Although electronic filing will be permissive, we strongly encourage applicants to take advantage of electronic filing, and expect that many will do so. The forms will be accessible to anyone with a computer and a modem, without the need to purchase any special computer software.¹⁸⁹ The Commission's software will make filing more certain for applicants by automatically notifying them of

¹⁸⁷ See Comments of Stephen Toner at 1; Comments of Dane Udenberg at 1.

¹⁸⁸ In order to simplify their use and speed their processing, the Commission has streamlined broadcast applications in adapting them to an electronic format. Open-ended questions requiring detailed exhibits have been replaced with simple yes/no questions as to compliance with Commission rules, supplemented by instructions and worksheets to explain the pertinent rules and help ensure that applicants answer the questions correctly. See *Streamlining Report and Order*, 13 FCC Rcd at 23067-68.

¹⁸⁹ With regard to operation and security issues, the electronic filing system for LPFM applications will function in a similar manner as the Commission's system for other broadcast applications. See *Streamlining R&O*, 13 FCC Rcd at 23062-65.

critical errors or omissions in their applications, and allowing them to correct the applications prior to submission. This software also will provide applicants with immediate verification that their applications have been received by the Commission. In addition, it will allow applicants to submit amendments, make corrections to their previously-filed applications, and submit narrative, explanatory exhibits. Furthermore, we intend to design additional software that will be available on the Commission's Web site to assist interested parties in making a preliminary determination as to which frequencies are available for LPFM use, based on current information in the Commission's database. Thus, LPFM applicants using the electronic filing system also will have access to a form of automated technical assistance in preparing their applications.

2. Window Filing Process

127. Background. We proposed in the *Notice* to adopt a window filing approach for LPFM applications, with short filing windows of a few days each to “lessen the occurrence of mutually exclusive applications and speed service to the public.”¹⁹⁰ The Commission recently substituted a uniform window filing procedure for the various application procedures for new commercial broadcast stations, and for major changes to existing stations.¹⁹¹ Under this procedure, the Commission announces by public notice a “window” or specific time period during which applications may be filed. When the window closes, the staff reviews the applications filed to determine whether any request mutually exclusive authorizations and, therefore, are subject to competitive bidding. Non-mutually exclusive applications are processed in accordance with our general procedures. Groups of mutually exclusive applications are identified by public notice and proceed to auction. The Commission also is considering substituting a window procedure for the two-step, cut-off list procedures now in place for full-service NCE broadcast applications.¹⁹²

128. In the *Notice*, we also asked for comment as to whether a first come-first served process might serve the public interest better than a window process by more effectively avoiding mutual exclusivity among LPFM applications.¹⁹³ We speculated that electronic filing “might give us the capacity to ascertain the precise sequence in which applications are submitted by different parties.”¹⁹⁴ Thus,

¹⁹⁰ *Notice*, 14 FCC Rcd at 2506-07.

¹⁹¹ *See* Implementation of Section 309(j) of the Communications Act—Competitive Bidding for Commercial Broadcast and Instructional Television Fixed Services, *First Report and Order*, MM Docket No. 97-234, 13 FCC Rcd 15920, 15972-74 (1998).

¹⁹² Reexamination of the Comparative Standards for Noncommercial Educational Applicants, Further Notice of Proposed Rulemaking in MM Docket No. 95-31, 13 FCC Rcd 21167, 21175 (1998).

¹⁹³ Under first-come first-served procedures, applications may be filed at any time, and the filing of an acceptable application precludes the subsequent filing of mutually exclusive applications, unless filed on the same day. Mutual exclusivity arises when competing applications are filed on the same day. These procedures now are used only for minor changes for commercial and NCE broadcast stations. *See* 1998 Biennial Regulatory Review—Streamlining of Radio Technical Rules in Parts 73 and 74 of the Commission's Rules, *First Report and Order* in MM Docket No. 98-93, 14 FCC Rcd 5272, 5273-77 (1999).

¹⁹⁴ *Notice*, 14 FCC Rcd at 2506.

applications conflicting with ones filed “even a moment earlier”¹⁹⁵ might be rejected as unacceptable for filing, avoiding mutual exclusivity in many cases. We noted a number of drawbacks to this approach, however, including the possibility that applicants might lose filing rights based solely on the quality of their Internet connections.

129. Comments. Many commenters support a window filing approach, and offer various suggestions as to the appropriate duration of filing windows.¹⁹⁶ Joshua Weiss comments that, in order to even the playing field for potential LPFM applicants, the Commission should list available frequencies and locations well in advance of opening a window. Warren Michelsen states that a Commission database capable of helping applicants determine frequency availability in the areas in which they are interested would help avoid the occurrence of mutual exclusivity.¹⁹⁷ Some commenters instead favor a first come-first served filing system, generally contending that it would be a better means of avoiding mutual exclusivity than a window approach.¹⁹⁸ However, Ronnie Miller argues that a first-come first-served system would give an unfair advantage to applicants with superior financial and technical resources.¹⁹⁹ Several commenters suggest hybrid approaches combining elements of window and first come-first served systems.²⁰⁰

130. Decision. Based on our consideration of the record, we will adopt a window filing process for LPFM applications. We previously stated that a window process “provides the staff with a mechanism to control effectively the filing and processing of broadcast applications.”²⁰¹ We believe that such a mechanism is important here because of the large number of LPFM applications that we expect to receive. In addition, the first-come first-served approach envisioned in the *Notice*, which would determine filing priority based on the exact time that applications are filed, is feasible only if electronic filing is required,

¹⁹⁵ *Id.*

¹⁹⁶ *See, e.g.*, Comments of Michael Robert Birdsill at 5; Comments of Ronnie Miller at 18-19; Comments of Andrew Morris at 15; Reply Comments of Kenneth W. Bowles at 19 (supporting short filing windows of only a few days or less); Comments of Creative Educational Media Corp. at 11; Comments of Positive Alternative Radio at 15; Comments of Community Media at 9; Comments of Oklahoma and Texas Departments of Transportation at 6; Comments of UCC, et al. at 35 (supporting windows of several months, open each year at the same time).

¹⁹⁷ Joseph Belisle and Stephen Toner suggest that LPFM applicants be limited to one application per window to reduce the likelihood of mutual exclusivity and to prevent speculative or abusive filings. Comments of Joseph Belisle at 1; Comments of Stephen Toner at 1. We need not consider this suggestion in light of the eligibility requirements we are adopting for LPFM applicants. In addition, for the reasons discussed below, we reject the suggestions of several commenters that the first filing window be reserved for institutions that serve women and minorities, or for applicants with a demonstrated commitment to their communities. *See* ¶ 137.

¹⁹⁸ *See, e.g.*, Comments of Joseph Belisle at 1; Comments of John Bowker at 18; Comments of Kirk Chestnut at 1; Comments of David McOwen at 3-4; Comments of Forrest Parsons at 2.

¹⁹⁹ Comments of Ronnie V. Miller at 18-19.

²⁰⁰ *See, e.g.*, Comments of Scott Drew at 2; Comments of Community Broadcasters at 18.

²⁰¹ *Auctions Ist R&O*, 13 FCC Rcd at 15973 .

which will not be the case, at least initially.²⁰² Moreover, we are concerned that such an approach, by placing a premium on filing at the earliest possible moment, might unfairly disadvantage certain applicants based solely on the quality of their Internet connections.²⁰³ The filing of hundreds or thousands of applications at once also might place unbearable strains on the LPFM electronic filing system. A window filing process avoids these pitfalls, as applicants will be able to file at any time over a period of several days without losing filing rights.

131. Once this *Order* becomes effective,²⁰⁴ the Mass Media Bureau, pursuant to delegated authority, will promptly release a public notice announcing a national filing window for LP100 applications.²⁰⁵ We anticipate that this window will open in May.²⁰⁶ The notice will be issued at least thirty days in advance of the opening of the filing window. Full power broadcast applications filed on or after the date of release of a public notice announcing the opening of an LPFM window will not preclude the filing of conflicting LPFM applications filed during that window. However, where the conflict ultimately is determined to relate to service inside the city grade contours of the full power station, the LPFM application will be dismissed.²⁰⁷ The window itself will be open for a period of five business days. We believe that five days, combined with thirty days' specific advance notice and the additional time between the release of this *Order* and the public notice announcing the window, should give interested parties sufficient time to prepare and file their LPFM applications, while minimizing the number of mutually exclusive LPFM applications. We emphasize that applications filed before or after the dates specified in the public notice will not be accepted.

132. In accordance with our window filing procedure for commercial broadcast applications, after the LPFM window closes, the staff initially will screen applications for the purpose of identifying those that are mutually exclusive and those that fail to protect existing broadcast stations in accordance with the standards adopted herein. Applications that fail to properly protect these existing stations will be dismissed without the applicant being afforded an opportunity to amend. This will increase the speed and efficiency with which LPFM applications can be processed by the staff. Technically acceptable non-

²⁰² Without mandatory electronic filing, the staff would have no way of determining the filing priority of applications that were electronically-filed and paper-filed on the same day.

²⁰³ Cf. Review of the Commission's Regulations Governing Television Broadcasting, Order on Reconsideration, MM Docket No. 91-221, FCC 99-343 (released November 10, 1999) (rejecting first come-first served processing of applications filed pursuant to modified rules adopted in the local broadcast ownership proceeding because, among other things, "a 'first come, first served' system could initiate a 'race' to Mellon Bank to file applications, and result in filers camping out to be first in line at the filing counter.").

²⁰⁴ This Order will become effective 60 days after publication in the Federal Register.

²⁰⁵ For the reasons discussed above, the first filing window will be open solely to applicants for 100-watt LPFM stations. See ¶ 11-14. We anticipate opening a second filing window for 10-watt LPFM stations in the future, after the close of the first window. See *id.*

²⁰⁶ Information about application procedures, and in particular the timing of the application window, will be available on the Commission's LPFM website: www.fcc.gov/mmb/prd/lpfm.

²⁰⁷ See discussion of the city-grade contour, at ¶ 67.

mutually exclusive applications will be further reviewed for acceptability and processed by the staff in accordance with the Commission's general procedures. Groups of mutually exclusive applications will be identified in a subsequent public notice, and will be subject to the selection procedures set forth below.²⁰⁸ After an application is tentatively selected from a mutually exclusive group, it will be reviewed for acceptability, and a public notice will be released announcing the finding that the application has been tentatively selected and is acceptable for filing.²⁰⁹ Petitions to deny the application will be due within 30 days of the release of the public notice of its acceptability for filing.²¹⁰ Petitions and informal objections will not be considered unless and until the application has been tentatively selected for processing and found acceptable for filing.

133. As stated above, we are developing software to assist interested parties in determining whether specific frequencies may be available at specific locations for LPFM use. This software will not be able to determine conclusively whether a particular frequency will be available for an applicant, as frequency availability also will depend, among other things, on whether competing applications are filed during the LPFM filing window. Nevertheless, we anticipate that the software will help interested parties focus on potentially-available facilities, and will provide technical assistance for interested parties with limited financial resources. We anticipate that this software will be ready for use by the time we announce the first filing window for LPFM applications. The Mass Media Bureau will issue a public notice with information regarding how to access the software and the technical assistance it can provide. Such information also will be posted on the Commission's Web site.

3. Selection Among Mutually Exclusive Applications

134. Background. In the *Notice*, we requested comment as to whether the proposed LPFM service should be restricted to NCE applicants or open to both commercial and NCE applicants.²¹¹ We tentatively concluded that, pursuant to statutory requirements, mutually exclusive applications for commercial LPFM facilities would be subject to auction.²¹² We asked for comment on alternative methods for resolving mutual exclusivity among NCE LPFM applicants. We specifically referred commenters to our proceeding reexamining full-service NCE comparative standards, where we sought comment on three possible methods for selecting among mutually exclusive applicants: (1) comparative hearings; (2) a lottery process weighted in favor of certain applicants based on statutory requirements and other factors;

²⁰⁸ See ¶¶ 136-152.

²⁰⁹ A tentative selectee whose application is found unacceptable for filing will be given a single opportunity to submit a curative amendment, provided that the amendment is minor and the amended application has the same number of points as originally claimed, or more than the points claimed by the next highest applicant. Tentative selectees whose applications remain unacceptable for filing after this opportunity will be removed from their mutually exclusive groups, and will not be provided with an additional opportunity to amend.

²¹⁰ See 47 C.F.R. § 73.3584.

²¹¹ *Notice*, 14 FCC Rcd at 2483, 2485.

²¹² *Id.* at 2507-08, citing Balanced Budget Act of 1997, § 3002(a)(1), codified as 47 U.S.C. § 309(j); see *Auctions Ist R&O*, 13 FCC Rcd at 15924-25 (concluding that auctions are mandatory for all primary and secondary commercial broadcast services).

and (3) a system assigning points to applicants based on various selection criteria.²¹³

135. Comments. Most commenters that address the matter oppose the use of competitive bidding, arguing that it would undermine the Commission's stated goals in establishing the LPFM service.²¹⁴ Few commenters support the use of comparative hearings to resolve mutually exclusive NCE applications. There was support among commenters for the use of a lottery process, although most of these commenters argued the merits of lotteries over auctions, rather than over an alternative selection method.²¹⁵ A number of commenters also favored the use of a point system. In addition, several commenters suggest that we impose arbitration to resolve mutual exclusivity,²¹⁶ and one advocates the use of "conflict reduction methods" such as allowing "liberal channel and coverage changes."²¹⁷ Commenters also propose various selection factors for use within a comparative selection process.

136. Decision. Based on our consideration of the record, we shall adopt a point system for resolving mutual exclusivity among LPFM applicants. The point system will include three selection criteria: (1) established community presence; (2) proposed operating hours; and (3) local program origination. The system will employ voluntary time-sharing as a tie-breaker, that is, tied applicants will have an opportunity to aggregate points by submitting time-share proposals.²¹⁸ As a last resort, where a tie is not resolved through time-sharing or settlement, we shall award successive equal license terms totaling eight years (the normal license term), without renewal expectancy for any of the licensees.

137. We conclude that the point system we are adopting is superior to alternative selection methods. As discussed above, the LPFM service will be reserved for noncommercial, educational service, and we are precluded by statute from using auctions to award station licenses on channels reserved for NCE use.²¹⁹ Accordingly, we need not discuss an auction-based selection mechanism. In our proceeding

²¹³ See *NCE Further Notice*, 13 FCC Rcd at 21170-81.

²¹⁴ See, e.g., Comments of Mid-America Broadcasting Company at 4; Comments of Morris Broadcasting Company at 11-12; Comments of Mark Pfohl at 1; Comments of Positive Alternative Radio at 9; Comments of Keith Reising at 1; Comments of Douglas E. Smith at 2; Comments of Voice of Vashon at 2; Comments of Robert T. Wertime at 1; Comments of Zillah School District at 5. Likewise, many of the comments filed in response to the two petitions for rule making requesting the creation of low power radio services opposed the use of auctions. See *Notice*, 14 FCC Rcd at 2507.

²¹⁵ See, e.g., Comments of Mid-America Broadcasting Company at 4; Comments of Morris Broadcasting Company at 10-11; Comments of Keith Reising at 1; Comments of Zillah School District at 5.

²¹⁶ See, e.g., Comments of Alliance for Community Media at 9; Comments of Robert T. Wertime at 1.

²¹⁷ See Comments of CDC at 13.

²¹⁸ Applicants also will be able to propose time-sharing as part of a settlement agreement among all mutually exclusive applicants, at any time after the release of a public notice identifying their mutual exclusive group. See ¶ 147.

²¹⁹ See *Auctions Ist R&O*, 13 FCC Rcd at 15928-31.

reexamining full-service NCE comparative standards, we tentatively rejected comparative hearings because they tend to be lengthy, cumbersome, and resource-intensive, without substantial offsetting benefits.²²⁰ These disadvantages make comparative hearings particularly ill-suited for selecting LPFM applicants. Like comparative hearings, mandatory arbitration and engineering solutions could impose significant delays on the LPFM authorization process and impose additional expenses on applicants. Moreover, although we will encourage individual settlements as a means of resolving mutual exclusivity among LPFM applicants,²²¹ the Commission lacks the resources to administer a system that would require arbitration or the imposition of engineering solutions in every instance of mutual exclusivity. Finally, we conclude that a lottery system is comparatively inferior to a point system as an LPFM selection method. The primary benefits of a lottery system are the speed and ease with which it may be applied.²²² As discussed below, however, a point system offers like benefits. Moreover, there are unresolved legal and policy issues surrounding the use of a lottery system that pose a risk of delaying the introduction of LPFM service to the public.²²³ A point system does not entail similar risks. A lottery process is also inherently inferior to a point system in its ability to further the Commission's policy goals due its random nature. This randomness may be mitigated, but not eliminated, by weighting in favor of certain types of applicants. For these reasons, in the case of LPFM service, we reject all of these approaches in favor of a point system.²²⁴

138. *Point System.* We believe that a point system is the best-suited selection methodology for promoting the Commission's policy goals for the LPFM service and speeding its introduction to the public. The Commission has used a point system procedure with success in the Instructional Television Fixed Service (ITFS).²²⁵ Like lotteries, point systems have the potential to be fast, inexpensive, and administratively efficient. Unlike lotteries, however, point systems make possible the selection of applicants based on objective criteria designed to best advance the public interest in the particular service at issue. Finally, the fact that LPFM licenses are non-transferable²²⁶ eliminates a major potential disadvantage of any system based on selection criteria; it prevents the integrity of the system from being

²²⁰ *NCE Further Notice*, 13 FCC Rcd at 21171.

²²¹ We clarify that we permit LPFM applicants to propose settlements to resolve mutually exclusive applications because the use of settlements serves the public interest in instances such as this where auctions are not permissible. In light of the fact that we are not auctioning this service, we believe settlements provide an appropriate method to resolve issues of unresolved mutual exclusivity and avoid the risk of protracted hearings. *See* ¶ 150.

²²² *See NCE Further Notice*, 13 FCC Rcd at 21171-72.

²²³ *See Adarand Constructors v. Pena*, 515 U.S. 200 (1995).

²²⁴ Our decision here is not intended to prejudge the issues raised in our proceeding reexamining the comparative standards for full-service NCE stations. *See NCE Further Notice*, 13 FCC Rcd at 21171-76.

²²⁵ *See* 47 C.F.R. §74.913. The ITFS is a nonbroadcast, point-to-point service intended primarily to provide formal educational programming offered for credit to enrolled students of accredited schools. Pursuant to the provisions of the Balanced Budget Act of 1997, the Commission has determined that pending and future mutually exclusive ITFS applications shall be resolved by competitive bidding, unless Congress enacts legislation exempting ITFS from competitive bidding. *See Auctions Ist R&O*, 13 FCC Rcd at 16003-04.

²²⁶ *See* ¶ 163.

undermined by the rapid assignment or transfer of station licenses by an entity that was awarded the license over other applicants on some merit basis that is not necessarily found in the buyer.²²⁷

139. *Point System Operation—Selection Criteria.* Our point system will include three selection criteria for mutually exclusive applicants: (1) established community presence; (2) proposed operating hours; and (3) local program origination. These criteria are directly related to the advancement of the public interest that the Commission has found warrants the introduction of this new service. To protect the integrity of the selection process and ensure that its full benefits may be realized, we have chosen clear-cut selection factors that are objective in nature and do not require burdensome documentation.

140. *Established Community Presence.* For the reasons set forth above, first, applicants that have an established community presence of at least two years' duration will be awarded one point. An applicant will be deemed to have an established community presence where, for a period of at least two years prior to application, the applicant is able to certify that it has been physically headquartered, has had a campus, or has had 75 percent of its board members residing within 10 miles of the reference coordinates of the proposed transmitting antenna. This criterion will favor organizations that have been operating in the communities where they propose to construct an LPFM station and thus have "track records" of community service and established constituencies within their communities. We believe that such applicants, because of their longstanding organizational ties to their communities, are likely to be more attuned to, and have organizational experience addressing, the needs and interests of their communities. In this regard, a number of commenters suggest preferences based on prior community service and/or community support.²²⁸ These suggested factors could be subjective in nature, however, and could be burdensome to demonstrate and verify. In addition, we believe that preferring organizations that have been in existence and physically present in the community for two years will help prevent maneuvering of the point system by those who might otherwise establish multiple organizations to file LPFM applications.

141. As we stated above in our discussion of the community-based eligibility requirement, we do not believe this preference for established local entities contravenes the court's concerns in *Bechtel*. In adopting such a comparative factor, we further note that the *Bechtel* court was concerned that quantitative integration factors worked to the virtual exclusion of other factors the court deemed potentially relevant in determining the relative quality of service that would be provided by an applicant. For LPFM, we are including other selection factors and giving them equivalent weight in the selection process. Moreover, while the two-year presence factor has a quantitative aspect, it is objectively verifiable and does not depend on promises of future performance, as the integration preference did.

142. Applicants claiming points for established community presence will be required to certify in their applications that they meet the above-stated conditions. The application form will identify appropriate documentation that must be made available for the point claimed. Applicants will be required

²²⁷ See *NCE Further Notice*, 13 FCC Rcd at 21181-83.

²²⁸ See, e.g., Comments of Kirk Chestnut at 1 (require competing applicants to demonstrate community interest in their applications with letters of endorsement from community leaders and citizens); Comments of Morris Broadcasting Company at 7 (preference for applicants with record of prior service to minority communities or prior employment of minorities).

to submit this information at the time of filing and it will be available in our public reference room. As with other broadcast applications, the Commission will rely on certifications but will use random audits to verify the accuracy of the certifications.²²⁹ This information also will enable applicants to verify that competing applicants qualify for the points they claim.

143. *Proposed Operating Hours.* Second, applicants that pledge to operate at least 12 hours per day will be assigned one point. As set forth below, the minimum operating hours for LPFM stations will be five hours per day.²³⁰ This criterion does not impose any additional requirement, but awards points to applicants that pledge longer hours of operation. Applicants that propose more intensive use of the broadcast frequencies they seek will advance the Commission's general policy objective of ensuring efficient spectrum use and providing more programming to serve their communities.

144. *Local Program Origination.* Finally, applicants that pledge to originate locally at least eight hours of programming per day will be assigned one point. For purposes of this criterion, local origination will be defined as the production of programming within 10 miles of the reference coordinates of the proposed transmitting antenna.²³¹ This criterion derives from the service requirements for full-service broadcast stations, which are required to maintain the capacity to originate programming from their main studios.²³² LPFM licensees will not be subject to main studio requirements, and will have discretion to determine the origination point of their programming.²³³ As a comparative selection factor, local program origination can advance the Commission's policy goal of addressing unmet needs for community-oriented radio broadcasting.²³⁴ In this regard, we believe that an applicant's intent to provide locally-originated programming is a reasonable gauge of whether the LPFM station will function as an outlet for community self-expression.

145. With regard to both the second and the third selection criteria, applicants will be required to certify in their applications that they will meet the qualifying conditions for the points claimed. We will require successful applicants to adhere to their operating hours and local program origination pledges.²³⁵

²²⁹ See *Streamlining R&O*, 13 FCC Rcd at 23084-87.

²³⁰ See ¶ 182.

²³¹ See generally *Arizona Communications Corp.*, 25 FCC 2d 837 (1970), *recon. denied*, 27 FCC 2d 283 (1971).

²³² See Amendment of Section 73.1125 and 73.1130 of the Commission's Rules, the Main Studio and Program Origination Rules for Radio and Television Broadcast Stations, Memorandum Opinion and Order in MM Docket No. 86-406, 3 FCC Rcd 5024, 5026 (1988).

²³³ See ¶ 186.

²³⁴ See *Notice*, 14 FCC Rcd at 2471; see also Comments of Alliance for Community Media at 7 (advocating points to applicants providing most local programming); Comments of UCC, et al. at 35 (advocating point system using local program origination criteria).

²³⁵ As noted above, a primary concern of the court in *Bechtel* was that there was no obligation for successful applicants to adhere to their integration proposals. See ¶ 34.

As these criteria are prospective in nature, they will not be subject to verification at the application stage. The Commission will use random audits to verify the accuracy of the certifications, and will consider written complaints regarding actual performance. Consistent with our current practice, the staff may issue letters of inquiry requiring submission of documentation in connection with such audits. Where analysis of the requested information indicates that licensees have not fulfilled their pledges, appropriate action will be taken, including the possibility of monetary forfeitures and revocation proceedings.²³⁶

146. In choosing selection criteria, we have carefully considered the comments we received advocating various selection factors, as well as the point system elements under consideration in our proceeding reexamining full-service NCE comparative standards.²³⁷ We believe that the factors we have chosen best balance our interest in furthering the specific localized objectives of the LPFM service and avoiding cumbersome, subjective and manipulable criteria. We note that a number of commenters advocate preferences for entities controlled by minorities.²³⁸ We shall defer consideration of this matter. The Commission is conducting fact-finding studies as to whether such preferences may be justified consistent with the Supreme Court's decision in *Adarand Constructors v. Peña*.²³⁹ Depending on the outcome of these studies, we will consider in the future whether to adopt minority control as a point system factor.

147. *1st Tiebreaker -- Voluntary Time-Sharing*. In the event that the point system results in a tie among two or more mutually exclusive applicants, applicants will have the opportunity, within 30 days of the release of a public notice announcing the tie, to submit amendments to their applications incorporating voluntary time-share proposals. Each time-share proponent must propose to operate at least 10 hours per week. Time-share proposals may function as tie-breakers in two different ways. First, all of the tied applicants in a mutually exclusive group may propose a time-share proposal, in which case the staff will review and process all of the tied applications. Second, some of the tied applicants in a mutually exclusive group may submit a time-share proposal, in which case the time-sharers' points will be aggregated. Time-sharers may aggregate points under each of the three selection criteria.²⁴⁰ The purpose of allowing point aggregation is to encourage time-share arrangements as a means of resolving mutual exclusivity among tied LPFM applicants. In addition, we believe that time-sharing arrangements will serve the public interest by increasing participation by a variety of local community organizations in the operation of LPFM stations.

²³⁶ See generally *Streamlining R&O*, 13 FCC Rcd at 23084-87.

²³⁷ See *NCE Further Notice*, 13 FCC Rcd at 21177-80.

²³⁸ See, e.g., Comments of Mid-America Broadcasting Company at 9; Comments of Southeast Association of Microbroadcasters at 1; see also Comments of Morris Broadcasting Company at 10-11 (preference for applicants with record of prior service to minority communities or prior employment of minorities).

²³⁹ 515 U.S. 200 (1995).

²⁴⁰ For example, two time-sharers that claimed points individually for established community presence and proposed operating hours and local program origination may claim a combined two points for each of these criteria, for a total of six points. They need not aggregate hours of operation or locally-originated programming to aggregate their points for these criteria.

148. Our decision to incorporate voluntary time-sharing into the point system as a tie-breaker is based on our judgment that voluntary time-share arrangements have the potential to advance the Commission's goals for the new service. We noted in our proceeding reexamining full-service NCE comparative standards that "[a] number of commenters dislike mandatory share-time arrangements, finding them confusing to audiences, and potentially inefficient for licensees."²⁴¹ On a voluntary basis, however, time-sharing has significant potential advantages for LPFM applicants. From a practical standpoint, the localized nature of the LPFM service is likely to enhance applicants' ability to time-share. In many cases, the small scale of LPFM operations also may make time-sharing more efficient for LPFM licensees. Furthermore, by increasing the number of new broadcast voices, time-sharing can advance our interest in promoting additional diversity in radio voices and program services through the LPFM service.²⁴²

149. *Final Tiebreaker -- Successive License Terms.* As a last resort, in cases where a tie is not resolved through settlement or time-sharing, the staff will review tied applications for acceptability. Applicants whose applications are grantable will be eligible for equal, successive license terms of no less than one year each, spanning a total of eight years. Successive license terms will not be granted for groups of more than eight tied, grantable applications. In the event of such a situation, the staff will dismiss all but the applications of the eight entities with the longest established community presences, as demonstrated by the documentation submitted with their applications. If this does not limit the group of applications to eight, the entire group will be deemed ungrantable and will be dismissed if, after a final opportunity to submit settlement proposals within 30 days of the release of a public notice, the situation is not resolved.²⁴³ Where successive license terms are granted, there will be no renewal expectancy for any of the licensees.²⁴³ If none of the tied, grantable applications proposes same-site facilities, then all will be granted at the same time. The sequence of the applicants' license terms will be determined by the sequence in which they file their applications for licenses to cover their construction permits, based on the day of filing.²⁴⁴ However, if any of the tied, grantable construction permit applications propose same-site facilities, the applicants proposing such facilities will be required, within an additional 30 days, to submit a settlement agreement proposing the sequence of the license terms for such applicants. If they fail to do so, they will be removed from the mutually exclusive group and the remaining applications will be granted.

150. *Settlements.* Applicants may propose a full settlement at any time during the selection process after the release of the public notice announcing the mutually exclusive group. Such settlements must be universal -- that is, they must involve all of the mutually exclusive applicants within a group -- and must comply with the Commission's general rules for settlements, including the requirement that the settling parties certify that they have not received consideration for the dismissal of their applications in

²⁴¹ *NCE Further Notice*, 13 FCC Rcd at 21180.

²⁴² *Notice*, 14 FCC Rcd at 2471.

²⁴³ If for some reason a successive term licensee becomes unable to operate the station during its portion of the license term, that licensee's time will be divided equally among the remaining licensees for that station.

²⁴⁴ For example, assume an unresolved tie among four grantable applications. If permittees A, B, C and D file their license applications in that order, then their two-year license terms will be in that sequence, with the eight years commencing on the date that A's license application is granted.

excess of their legitimate and prudent expenses.²⁴⁵ Settlements may incorporate voluntary time-share proposals.

151. *Delegated Authority.* As we explained in our proceeding reexamining full-service NCE comparative standards, the Commission currently may delegate authority for applying point systems only to administrative law judges or to individual Commissioners.²⁴⁶ This statutory restriction is based on the fact that point systems technically are considered a type of simplified hearing. We believe that the staff would be able to administer the LPFM point system in a more streamlined manner than administrative law judges or individual Commissioners. Therefore, we will seek authority from Congress, through specific legislation, to delegate responsibility to the staff for applying the point system.²⁴⁷ Until we receive such authority, the staff will refer point system proceedings to the Commission for disposition.

152. *Minor Modification of Authorized LPFM Stations.* We will adopt one exception to the window filing process to permit the filing at any time of certain “minor change” applications. For LP100 stations, a minor change may involve a transmitter site relocation of less than two kilometers. For LP10 stations, a minor change may involve a transmitter site relocation of less than one kilometer. Minor change applications may also propose a change to an adjacent or IF frequency or, upon a technical showing of reduced predicted interference, to any other frequency. Similarly, we will consider as minor any change in frequency necessary to resolve actual interference. All other changes will be classified as “major” and subject to our window filing procedures. Minor change applications also must satisfy the technical and legal requirements applicable to LPFM stations generally.

4. License Terms and Renewals

153. Background. In the *Notice*, we asked how often and how closely we should actively monitor, within the parameters of our statutory responsibility, the performance of LP100 stations in connection with the license renewal process. We asked whether a *pro forma* process would satisfy any statutory requirement, in the absence of specific public complaint. We also asked for comment on whether stations other than LP1000 stations should be authorized for finite, nonrenewable periods, such as five or eight years, to create additional opportunities for new entrants in the LPFM service. We explained that making broadcast outlets available to more speakers is a fundamental premise of this rulemaking effort, and that we did not expect that such a limitation would discourage the very modest investment required to build such a station. We sought comment on whether the disruption of service to the public that non-renewability would involve outweighed the potential benefits of making this service available to more speakers on a consecutive basis.

154. Comments. Commenters propose a variety of LPFM license terms and the majority argue

²⁴⁵ See 47 C.F.R. § 73.3525.

²⁴⁶ See *NCE Further Notice*, 13 FCC Rcd at 21176, n. 22. 47 U.S.C. §155(c)(1).

²⁴⁷ The Commission previously secured similar legislation allowing it to delegate authority to the staff to conduct ITFS point system proceedings. See *id.*

that LPFM licenses should be renewable. Commenters suggest license terms of one,²⁴⁸ two,²⁴⁹ four,²⁵⁰ five,²⁵¹ and seven years.²⁵² REC Networks advocates a five-year renewable license term. According to REC Networks, granting a short license term would place the burden on LPFM licensees to demonstrate their continuing interest in providing local service.²⁵³ Other commenters contend that LPFM stations should have the same eight year license periods granted to full power stations.²⁵⁴

155. Most commenters argue that all LPFM licenses should be renewable.²⁵⁵ Jeffrey Richman believes that licenses should be renewable because (1) applicants might be deterred if they do not have the expectation of renewal; (2) off-air periods between transfers would be confusing to the public; and (3) nonrenewable licenses would be inconsistent with the “renewal expectancy” Congress intended in sections 307(c) and 309(k)(1) of the Act.²⁵⁶ Douglas E. Smith and Warren Michelsen believe that even with renewable licenses, there would be turnover in ownership because, *e.g.*, the leadership of community groups will rotate and individual owners move frequently.²⁵⁷ REC Networks believes that through proper frequency coordination and time-sharing arrangements, many in crowded urban areas would have their turn at the microphone without having to wait several years for a license to expire.²⁵⁸ Commenters also contend that LPFM licensees should have the same renewal expectancy as existing broadcasters.²⁵⁹ On the other

Bowker at 16; Comments of Gary L. Nixon at 2; Comments of Scott D. Fowler at 44; Comments of Warren Michelsen at 6; Comments of Andrew Morris at 13; Comments of Jeffrey S. Richman at 3; Comments of REC Networks at 6; Comments of Douglas E. Smith at 4.

²⁵⁶ Comments of Jeffrey S. Richman at 3-4.

²⁵⁷ Comments of Douglas E. Smith at 4; Comments of Warren Michelsen at 6.

²⁵⁸ Comments of REC Networks at 16.

²⁵⁹ *See* Comments of NLG at 35; Comments of John D. Bowker at 16; Comments of Scott D. Fowler at 44. NLG suggests that a renewal preference be given initially to LPFM licensees, but that preference could be lessened after a 10-year period and possibly eliminated after a twenty-year period. NLG further believes that a renewal (continued....)

hand, Jennifer Anne Barrios and Robert Ke vess believe LPFM licenses should not be renewable.²⁶⁰

156. Decision. We will provide LP100 and LP10 licensees with the same license terms and renewal expectancy as full-power FM radio stations. Accordingly, licenses will be renewed for a term not to exceed eight years from the date of expiration of the preceding license²⁶¹ and LPFM licenses will be renewed, without consideration of competing applicants, if they have met the renewal standard of Section 309(k)(1) of the Act. Upon considering the comments filed in this proceeding, we find that granting renewable licenses is consistent with the goals we are seeking to advance with this service. Moreover, we believe that nonrenewable licenses would discourage licensees from developing facilities and audiences to the fullest extent possible. We therefore will grant, with one exception described in paragraph 159 below, renewable licenses for LPFM stations.

157. Section 73.1020(a) divides the country into 18 different regions containing one or more states for purposes of establishing synchronized schedules for radio and television licenses.²⁶² Radio station licenses expired under this rule in intervals between October 1, 1995, and August 1, 1998, and those licenses, renewed for eight years, will expire again between September 30, 2003, and July 31, 2006.²⁶³ We consistently grant initial terms for all new broadcast authorizations to fit into this synchronized schedule, although it means initial terms are usually for a period of less than eight years.

158. We adopt these synchronized schedules for LPFM licenses because maintaining the predictability, administrative efficiencies, public awareness, and fairness inherent in the existing synchronized schedule of license cycles serves the public interest. Accordingly, an initial LPFM license granted within any renewal period set forth in Section 73.1020 of our rules will be assigned the expiration date assigned to those full-power FM stations licensed in the same region during the same licensing cycle.²⁶⁴ Because of the cyclical nature of this process, granting initial full eight-year license terms in the

preference should be given to an LPFM station that has joined a local self-regulatory organization. Comments of NLG at 35.

²⁶⁰ Comments of Jennifer Anne Barrios at 1; Comments of Robert Ke vess, MD at 1.

²⁶¹ 47 C.F.R. § 73.1020(a). We may, however, issue either an initial or renewed license for a lesser term if we find doing so is in the public interest, convenience, and necessity. *Id.*; see 47 U.S.C. §307(c).

²⁶² Implementation of Section 203 of the Telecommunications Act of 1996 (Broadcast License Terms), Sections 73.1020 and 74.15, MM Docket No. 96-90, *Report and Order*, 13 FCC Rcd 1720, 1727, ¶ 18 (1997).

²⁶³ Licenses renewed for eight years in Maryland, the District of Columbia, Virginia, and West Virginia will expire on September 30, 2003. 47 C.F.R. §73.1020(a)(1). Licenses renewed for eight years in Delaware and Pennsylvania will expire on July 31, 2006. *Id.* §73.1020(a)(18).

²⁶⁴ Thus, for example, initial applications for licenses in Maryland filed within the current license cycle will expire on September 30, 2003, and initial applications for licenses in Pennsylvania filed within the current license cycle will expire on July 31, 2006. While we anticipate that many applicants will be licensed in Maryland with expiration dates of September 30, 2003, any applicant licensed in Maryland after September 30, 2003, will be assigned an expiration date no later than September 30, 2011. Likewise, any applicant licensed in Pennsylvania after July 31, 2006, will be assigned an expiration date no later than July 31, 2014.

middle of a licensing cycle could undermine the synchronization of the whole process. Like full-power licenses, LPFM licenses may then be renewed for a term not to exceed eight years from the expiration date of the preceding license. This approach will reduce the regulatory burden on LPFM broadcasters by affording them the same maximum license terms now granted other broadcasters, and will correspondingly reduce the associated burdens on the Commission. We see no compelling reason to vary from the term set by Congress for full-power stations. We further note that, while we will authorize eight-year license terms, the public may scrutinize station performance and file complaints with the Commission at any time during the term of an LPFM license.

159. The one exception to this rule pertains to situations where we grant successive license terms under the final tiebreaker procedures. These tiebreaker licenses will not be based on the synchronized licensing cycle of Section 73.1020.²⁶⁵ If applicants were granted last resort tiebreaker licenses conformed to the synchronized schedule, each licensee, depending on where in the renewal cycle we were, might receive authorizations to operate for a very short period of time, *e.g.*, a few months, with no opportunity to renew their license.

160. We will also extend the renewal expectancy provisions of Section 309(k)(1) of the Act to LPFM licensees.²⁶⁶ Providing incumbents with the likelihood of renewal encourages licensees to make investments to ensure quality service.²⁶⁷ Upon receiving an application for renewal of an LPFM license, we will determine whether the licensee has served the public interest, convenience, and necessity; whether there have been any serious violations of the Act or Commission rules; and whether there have been any serious violations that, taken together, would constitute a pattern of abuse. Only if incumbent LPFM licensees fail to meet these requirements will other applicants be eligible to apply for the same license. As noted, an exception is where the license is held for successive terms as a result of the final tiebreaker procedure. Such licenses will be nonrenewable.

5. Transferability

161. Background. In the *Notice*, we noted that some commenters urged us to restrict the sale of LPFM stations to deter the filing of speculative applications and trafficking in construction permits.²⁶⁸ We stated our belief that, in light of the limits we proposed on ownership of LPFM stations, we did not believe

²⁶⁵ See ¶ 149.

²⁶⁶ See 47 U.S.C. § 309(k)(1).

²⁶⁷ See Formulation of Policies and Rules Relating to Broadcast Renewal Applicants, Competing Applicants, and Other Participants to Comparative Renewal Process and to the Prevention of Abuses of the Renewal Process, *Third Further Notice of Inquiry and Notice of Proposed Rule Making*, 4 FCC Rcd 6363, 6364, ¶ 9 (1989) (quoting *Central Florida Enterprises, Inc. v. FCC*, 683 F.2d 503, 507 (D.C. Cir. 1982), see also *Greater Boston Television Corp. v. FCC*, 444 F.2d 841, 858 (D.C. Cir. 1970) (stating that renewal expectancies are provided “to promote security of tenure and to induce efforts and investments, furthering the public interest, that may not be devoted by a licensee without reasonable security”).

²⁶⁸ *Notice*, 14 FCC Rcd at ¶ 86; CRC Petition for Rule Making at 5.

that it was necessary to restrict the sale of any class of LPFM station. We invited commenters to address this issue, including whether restrictions on sales would be advisable if the Commission adopts ownership rules other than those proposed in the *Notice*.

162. Comments. While comments on the transferability of LPFM stations were mixed, the majority of commenters that addressed this issue supported either prohibiting transfers altogether or severely restricting them.²⁶⁹ UCC, et al., and Civil Rights Organizations proposed the adoption of rules prohibiting the sale of an LPFM station held for less than five years.²⁷⁰ Civil Rights Organizations argued that such a restriction would discourage speculators, who could operate even in a noncommercial environment, without deterring committed local broadcasters.²⁷¹ ACLU of Mass. *et al.* argues that permitting transfer of licenses and construction permits will permit the creation of a secondary market where LPFM licenses can be obtained without regard to licensing priorities that favor diversity and localism. Instead, it proposes that if an LPFM licensee decides that it can no longer own and operate its station, the license should be returned to the FCC where it can be reissued in accordance with the criteria adopted by the Commission.²⁷² A few commenters were in favor of permitting transferability of LPFM stations, arguing generally that owners who have invested in such stations should be able to realize the fair market value of such stations.²⁷³

163. Decision. After careful review of the comments, we have decided to prohibit the transfer of construction permits and licenses for LPFM stations. Contrary to our initial view stated in the *Notice*, we are persuaded that a prohibition on transfers will best promote the Commission's interest in ensuring that spectrum is used for low power operations as soon as possible, without the delay associated with license speculation. We are also persuaded that the goals of this new service, to foster opportunities for new radio broadcast ownership and to promote additional diversity in radio voices and program services, will best be met if unused permits and licenses are returned to the Commission. Given the modest facilities and noncommercial nature of LPFM stations, we do not believe non-transferability will discourage LPFM licensees from serving their listeners.

²⁶⁹ See, e.g., Comments of ACLU of Mass. *et al.* at 5-6; Comments of KVOI at 1; Comments of City of Berkeley, CA at 1; Comments of Jennifer Anne Barrios at 2; Comments of Eric Brown at 1; Comments of Mari J. Caro at 1; Comments of Robert Keves MD at 1; Comments of Miles Ohlrich at 1. John Bowker would permit sale of a license only for an amount equivalent to the depreciated value of the existing plant. Comments of John Bowker at 16. Quinnipiac College would permit the sale of stations only to entities that do not own other commercial stations. Comments of Quinnipiac College at 2.

²⁷⁰ Comments of Civil Rights Organizations at 26; Comments of UCC, et al. at 16. UCC, et al. would permit waiver of the anti-trafficking rule for good cause.

²⁷² Comments of ACLU of Mass. *et al.* at 5-6.

²⁷³ See, e.g., Comments of Scott D. Fowler at 45.

G. Programming and Service Rules

1. Public Interest Requirements

164. Background. In the *Notice*, we proposed to require LP1000 licensees to adhere to the same Part 73 requirements regarding public interest programming as apply to full-power FM licensees. We noted that this meant that each LP1000 licensee would be required to air programming serving the needs and interests of its community, using its discretion as to how to meet that obligation. We also listed several other rules, such as those regarding the broadcasting of taped, filmed, or recorded material, sponsorship identification, personal attacks, and periodic call sign announcements and sought comment on whether they should apply to LPFM stations. We stated a disinclination, however, to impose public interest programming requirements on LP100 and LP10 licensees, given the size of operations we envisioned and the simplicity we were striving to achieve in this service. We expected that the very nature of LP100 and LP10 would ensure that they served the needs and interests of their communities.

165. Comments. We received few comments on public interest requirements. Some commenters contend that we must apply all of the same basic public interest requirements to LPFM licensees that are applied to full-power broadcasters.²⁷⁴ The Low Power Radio Coalition believes that LPFM licensees must be held to high standards similar to those established for full-power broadcasters.²⁷⁵ UCC, et al., argues that the Commission must require all LPFM broadcasters to comply with the requirements of the public interest standard, as well as the sponsorship identification duties required by section 317 of the Act.²⁷⁶ NAB argues that all FM broadcast stations should be required to follow the same rules and contends that there is no basis on which to distinguish between different classes of stations.²⁷⁷ On the other hand, NLG contends that public interest rules outlined in the *Notice* should not be applied to LPFM stations with a 100 watt maximum.²⁷⁸ Similarly, other commenters oppose any requirements for LP100 and LP10 stations, arguing that it would place an unreasonable burden on those stations.²⁷⁹

166. Decision. Every broadcast licensee is required to operate its station in the public interest.²⁸⁰ Given the nature of the LPFM service, however, we conclude that certain obligations imposed on full-power radio licensees would be unnecessary if applied to LPFM licensees. We expect that the local nature of this service, coupled with the eligibility and selection criteria we are adopting, will ensure that LPFM licensees will meet the needs and interests of their communities. Thus, for example, consistent with

²⁷⁴ See Comments of John D. Bowker at 15; Comments of William T. Croghan, Jr. at 9.

²⁸⁰ See 47 U.S.C. § 309(a).

our rules for low power television, we will not adopt a rule requiring LPFM licensees to provide programming responsive to community issues or to maintain a list of issues addressed or specific programs aired.²⁸¹

167. We will, however, apply certain specific rules applicable to all broadcasters to LPFM licensees. First, LPFM operators must, of course, comply with those rules required by statute. Thus, for example, like all broadcasters, LPFM licensees will be expressly prohibited from airing programming that is obscene, and restricted from airing programming that is “indecent” during certain times of the day.²⁸² They must also comply with our sponsorship identification and political programming rules.²⁸³ In addition, we will require LPFM licensees to comply with our rules regarding taped, filmed, or recorded material,²⁸⁴ personal attacks,²⁸⁵ and periodic call sign announcements.²⁸⁶ Violation of any of these rules by an LPFM licensee would be as detrimental to its audience as violation by a full-power broadcaster, and widespread disregard for these rules could outweigh the benefits to the public this service is intended to bring.

2. Locally Originated Programming

168. Background. In the *Notice*, we sought comment on whether to impose a minimum local origination programming requirement on any of the three proposed classes of LPFM service. We opined that listeners benefit from local programming, because it often reflects needs, interests, circumstances, or perspectives that may be unique to that community. We also noted that many of LPFM’s initial supporters argued that the Commission’s rules should actively promote locally oriented programming by, for instance, limiting the amount of network programming a station could air. We expressed an expectation, however, that a significant amount of programming for LPFM stations would be locally produced as a matter of course. We also asserted that programming does not have to be locally produced to have interest or value to the listeners in a particular locale. Accordingly, we stated that we were inclined to give LP100 and LP10 licensees the same discretion as full-power licensees to determine what mix of local and non-local programming would best serve the community. To promote new broadcast voices, however, we proposed that an LPFM station not be permitted to operate as a translator, retransmitting the programming of a full-power station.

169. Comments. Many commenters favor the adoption of a locally originated programming obligation.²⁸⁷ According to UCC, et al., for example, a locally originated programming requirement would

²⁸¹ See *Report and Order*, BC Docket No. 78-253, 51 RR 2d 476 (1982) (*Low Power Television R&O*).

²⁸² 18 U.S.C. § 1464; 47 C.F.R. § 73.3999 (prohibits broadcasting of indecent material from 6:00 a.m. until 10:00 p.m., hours when children are likely to be in the audience).

²⁸⁴ 47 C.F.R. § 73.1208.

²⁸⁵ 47 C.F.R. § 73.1920.

²⁸⁶ 47 C.F.R. § 73.1201.

²⁸⁷ Comments of UCC, et al., at 3-4; Comments of William T. Croghan, Jr. at 8 (advocating 50% locally (continued....))

attract applicants that intend to provide a locally oriented service, is a basic element of the Commission's implementation of the public interest standard, and would resemble the duty TV stations have to provide educational and informational programming for children.²⁸⁸ A number of commenters oppose any specific obligations on LPFM licensees regarding locally originated programming.²⁸⁹ Amherst argues, for example, that the best way to prevent LPFM stations from becoming "corporate satellites" is through limits on LPFM license eligibility.²⁹⁰ If any locally originated programming requirements are applied, however, Amherst asserts that those requirements should be modest in scope and narrowly targeted to prevent stations from becoming mere "fronts" for the airing of material produced by larger entities.²⁹¹

170. Commenters generally agree that LPFM stations should not be used as translators for retransmitting full-power station programming.²⁹² The Civil Rights Organizations and Gary L. Nixon argue that an LPFM operator should not be permitted to operate as a translator or booster, except where an

originated programming); Comments of Gregory Caliri at 2 (advocating two-thirds locally originated programming); Comments of NLG at 25-26; Comments of Joseph Crump at 1; Comments of Jason D. Patent at 1 (advocating 75% locally originated programming); *see* Comments of Bott Broadcasting Co. at 35; Comments of Robert Keveess, MD at 1; Comments of Ronnie V. Miller at 9; Comments of Libraries for the Future at 1 (advocating 80% locally originated programming); Comments of Gene Kirby at 1 (advocating 100% locally originated programming).

²⁸⁸ Comments of UCC, et al. at 10-11. NLG considers the Commission's proposal not to impose a local programming requirement a major mistake that could undermine the entire LPFM service. Comments of NLG at 25-26; *see* Comments of Aaron Read at 10 (arguing that without strict restrictions to ensure local programming, national programmers will obtain LPFM licenses to rebroadcast nationally sourced programming, eliminating any new or local voices). REC Networks suggests that LPFM stations be required to provide at least eight hours of local programming each weekday, but contends that there should be no restrictions between 10:00 p.m. and 7:00 a.m. on weekdays or any time on weekends. Comments of REC Networks at 14-15.

²⁸⁹ *See, e.g.*, Comments of the Alliance for Community Media at 7 (believes local programming should not be mandatory, but suggests that the Commission give "priority points" to applicants based on the amount of public interest programming proposed); Comments of Warren Michelsen at 3 (supports the Commission's proposal to give low-power and LP10 licensees the same discretion as full-power licensees to determine what mix of local and non-local programming will best serve the community); Reply Comments of Kenneth W. Bowles at 16 (argues that local programming should not be required because LPFM is locally oriented by its nature).

²⁹⁰ Comments of Amherst at 57-58.

²⁹¹ Comments of Amherst at 58-59. For example, Amherst suggests that use of all central source feeds, combined, could be "capped" at 49 percent of programming, or use of any single central source feed could be "capped" at 25 percent of programming. *Id.* Amherst also argues that local content requirements should not apply to any materials that LPFM stations develop and donate or syndicate to each other or larger institutions. According to Amherst, syndication of original material could become a major source of influence or income for LPFM stations, and a way to get innovative, but potentially popular, material to the mainstream. *Id.* at 59. *See also* Comments of the Salida Colorado Radio Club at 3 (opposing regulating locally originated programming, suggesting instead that LPFM stations show a reasonable effort to have at least half of their programming of local origination and that compliance should be reviewed through enforcement actions).

²⁹² Comments of North Cascade Broadcasting at 7; Comments of Gary L. Nixon at 2; Comments of Trident Media at 2; Comments of the Alliance for Community Media at 3; Comments of John D. Bowker at 14.

LPFM station might retransmit another station's programming for the purpose of student training.²⁹³ Nixon also notes that LPFM stations should be prohibited from using any satellite programming.²⁹⁴ UCC, et al. states that the Commission should not allow low power stations to replicate another station's programming because it would turn the purpose of low power radio, to provide local programming, on its head.²⁹⁵

171. Decision. We continue to believe that LPFM licensees' provision of a significant amount of locally originated programming will enhance the success of this service. This is why we are encouraging the provision of locally originated programming by means of a licensing preference.²⁹⁶ However, we also believe that in certain cases, programming need not be locally originated to be responsive to local needs. Therefore, we do not believe it is necessary to impose specific requirements for locally originated programming on LPFM licensees. We believe that the nature of the service, combined with the eligibility criteria and preferences we are adopting, will ensure that LPFM licensees provide locally originated programming or programming that is otherwise responsive to local needs.

172. We do, however, agree with commenters that LPFM stations should not be used for retransmitting, either terrestrially or via satellite, the programming of full-power stations. This would significantly undercut a fundamental basis for the establishment of this service. This prohibition against LPFM stations operating as translators also promotes locally originated programming by eliminating a significant avenue for obtaining non-locally originated programming.

3. Political Programming Rules

173. Background. In the *Notice*, we sought comment on the applicability of political programming rules to each class of low power radio service that we might adopt. We explained that sections 312(a)(7) and 315 of the Communications Act, as amended, underlie some of these rules, and each is explicitly applicable to "broadcast stations." Thus, we lack the discretion not to apply these provisions to any class of LPFM station, regardless of size. We specifically sought comment on how each of these political broadcasting rules should be applied to low-power stations, taking into consideration our statutory mandate.

174. Comments. The few comments that we received on this issue support our tentative conclusion to adopt political programming rules for LPFM stations. UCC, et al. asserts that application of Title III duties to low-power broadcasters is non-discretionary, contending that the Commission must require all low-power broadcasters to comply with specified duties required by Sections 312 and 315 of the

²⁹³ Comments of Civil Rights Organizations at 26; Comments of Gary L. Nixon at 10.

²⁹⁴ Comments of Gary L. Nixon at 10.

²⁹⁵ Comments of UCC, et al. at 4, n.1.

²⁹⁶ See ¶ 144 (mutually exclusive applicants that pledge to provide at least eight hours of locally originated programming will receive one point).

Communications Act, as amended.²⁹⁷ REC Networks and John D. Bowker agree that political programming rules should be applied to LPFM services.²⁹⁸

175. Decision. We conclude that we are required by statute to apply the same political programming rules to low-power stations that we apply to full-power stations. There is ample precedent for how the political programming rules apply to noncommercial stations and thus how the rules will apply to LPFM. For example, Section 312(a)(7) of the Communications Act, as amended, requires broadcasters to allow legally qualified candidates for federal office reasonable access to their facilities,²⁹⁹ but because LPFM stations are noncommercial educational facilities, they must provide such access on a free basis.³⁰⁰ Section 315(a) of the Communications Act, as amended, requiring equal opportunities for candidates, will also apply.³⁰¹

176. In conformance with the statutory mandate, we will apply the reasonable access and equal opportunities provisions of the statute and the Commission's rules, as well as related policies delineated in prior Commission orders, to LPFM licensees. With respect to reasonable access, the Commission's policy has generally been to defer to the reasonable, good faith judgment of licensees as to what constitutes "reasonable access" under all the circumstances present in a particular case. Noncommercial educational stations, including LPFM stations, however, may not support or oppose any candidate for political office.³⁰² LPFM licensees cannot charge legally qualified candidates for the time used on their stations³⁰³

²⁹⁷ Comments of UCC, et al. at 19-21; see also Comments of NLG at 36.

²⁹⁸ Comments of REC Networks at 15; Comments of John D. Bowker at 15.

²⁹⁹ Specifically, section 312(a)(7) provides that "[t]he Commission may revoke any station license or construction permit for willful or repeated failure to allow reasonable access to or permit purchase of reasonable amounts of time for the use of a broadcasting station by a legally qualified candidate for Federal elective office on behalf of his candidacy." 47 U.S.C. § 312(a)(7); see 47 C.F.R. § 73.1944. This right of access does not apply to candidates for non-federal state or local offices.

³⁰⁰ See 47 C.F.R. § 73.1942(d). While noncommercial broadcasters are prohibited from charging legally qualified candidates for time, they may charge for out-of-pocket expenses.

³⁰¹ Section 315(a) of the Communications Act, as amended, provides that "if any licensee shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunities to all other such candidates for that office in the use of such broadcasting station." 47 U.S.C. § 315(a); see 47 C.F.R. § 73.1941. Section 73.1940 of the Commission's rules defines "legally qualified candidate" as any person who has publicly announced his or her intention to run for nomination or office, is qualified under the applicable local, state, or federal law to hold office for which he or she is a candidate, and has qualified for ballot placement or has otherwise met all the qualifications set forth in the Commission's rules. 47 C.F.R. § 73.1940. In addition, both the statute and the rules narrowly define the term "use" and exclude from the definition candidates' appearances in *bona fide* newscasts, interviews, documentaries, and the on-the-spot coverage of news events. 47 U.S.C. § 315(a)(1)-(4); see 47 C.F.R. § 73.1941(a)(1)-(4). Section 73.1941(b) further provides that "[a]s used in this section and § 73.1942, the term 'use' means a candidate appearance (including by voice or picture) that is not exempt under paragraphs 73.1941(a)(1) through (a)(4) of this section." 47 C.F.R. § 73.1941(b). Licensees have no power of censorship over the material broadcast under the equal opportunity provisions of section 315(a). 47 U.S.C. § 315(a); see 47 C.F.R. § 73.1941.

³⁰² 47 U.S.C. § 399; 47 C.F.R. § 73.1930(b); see *FCC v. League of Women Voters of Calif.*, 468 U.S. 364 (continued....)

and no LPFM licensee may discriminate among candidates “in practices, regulations, facilities, or services” or “make or give any preference to any candidate for public office.”³⁰⁴ In addition, we will require LPFM licensees to maintain a political file, if needed, to record the requisite particulars. The political file shall be maintained for public inspection at an accessible place in the station’s community. Finally, we will resolve any issues involving LPFM licensees on a case-by-case basis to determine whether the licensee is acting within the spirit of the statute and Commission rules and policies on political programming.

4. Station Identification

177. Background. In the Notice, we sought comment on whether to adopt a call sign system that would identify a low power radio station as such. We noted in the *Notice* that a nonstandard (five letter) identifying call sign system was used for the first several years of licensing low power television (LPTV) stations, but that the Commission later allowed LPTV stations to adopt call signs that were like those of full power stations, but were appended with the suffix “-LP.”

178. Comments. Commenters are divided over whether it would be in the public interest to employ special call signs that would help identify LPFM stations as low power. Some commenters argue that the use of call signs would help to identify legitimate from illegal stations, or help with the identification of malfunctioning or interfering stations.³⁰⁵ Other commenters feel that a new system of call signs for LPFM would be confusing to the public, with little or no compensating public benefit, and suggest that ordinary FM call signs be issued to new LPFM stations.³⁰⁶ Some commenters also argue that the use of call signs for low power broadcasters would not be burdensome to these broadcasters.³⁰⁷

179. Decision. The question raised by the *Notice* was not whether to have call signs for LPFM stations, as apparently misunderstood by some commenters, but whether to include a special designation in the call signs identifying LPFM stations as low power stations. It is imperative for a variety of reasons, including enforcement, convenience to the public, and conformance with international agreements, that all

(1984).

³⁰³ See 47 C.F.R. § 73.1942(d).

³⁰⁴ 47 C.F.R. § 73.1941(e).

³⁰⁵ See, e.g., Comments of William Croghan Jr. at 10; Comments of the Oklahoma Department of Transportation at 4. Some commenters suggest that FM translator call signs or amateur radio operator call signs should be adopted to identify LPFM stations. See, e.g., Comments of Harry W. Pardue at 2; Comments of Douglas E. Smith at 5. See also Comments of John Bowker at 17 (suggesting that a new pattern of call signs is needed, such as the station’s FM numerical channel followed by three letters); Comments of Gene Kirby at 2 (suggesting that for LP100 and LP10 stations, the only identification needed might be the station’s location and ownership, perhaps given at sign on and sign off of the station’s programming).

³⁰⁶ See, e.g., Comments of Andrew Morris at 14; Comments of Jeffrey S. Richman at 5.

³⁰⁷ See Comments of Timothy Cramer at 2. See also Comments of Harry W. Pardue at 2 (arguing that using an existing call sign system will reduce administrative burdens).

broadcasters, including low power broadcasters, use unique identifiers on the air. We also conclude that it will be extremely beneficial for LPFM operators to build an “identity” and do so in a radio-familiar manner. We were guided on this issue by our experience with low power television. In that service, we require stations’ call signs to indicate that they are low power stations, by appending the suffix “-LP” to their four-letter call signs. We thus will require low power stations to positively identify themselves. To avoid confusion for the public and to inform the public of the reasonable expectations they may have for service, the suffix “-LP” will be appended to LPFM station call signs (e.g., “WXYZ-LP”). Such identification will inform the public that a station is a low power station. An LPFM four-letter call sign cannot exactly duplicate the call sign of any other broadcast station and cannot contain the same first four letters as another station’s call sign without that station’s written consent.³⁰⁸ The Commission’s current call sign system will be modified to accommodate low power stations in the manner four letter call signs are provided to low power TV stations.³⁰⁹

5. Operating Hours

180. Background. In the *Notice*, we said we were not inclined to adopt minimum operating hours for LP100 or LP10 stations. However we expressed our concern that spectrum might be underutilized if low power stations were licensed but unused or underused, and asked for comments on this issue.

181. Comments. For LP100 and LP10 services, commenters either argue for: (1) low or no minimum operating hours, because of the cost burden involved in requiring extended hours of operations, or (2) a time sharing arrangement among local broadcasters.³¹⁰ This latter group of commenters argue that time sharing arrangements would reduce the part-time warehousing of spectrum that would occur by a single non full-time licensee, and would permit the entry of additional new voices into the local radio market.³¹¹

³⁰⁸ Thus, an LPFM station could not have the call sign WXYZ if a low power television station also had that four letter call sign because both would be identified as WXYZ-LP. If, on the other hand, WXYZ were the call sign of a full-power FM station and was not used by any LPTV station, the LPFM station could, with the consent of the full power station, use the call sign WXYZ. In this case, the two stations would be distinguished because one would be WXYZ-FM and the other would be WXYZ-LP.

³⁰⁹ 47 C.F.R. § 73.3550. LPFM stations shall also be subject to the station identification requirements of 47 C.F.R. § 73.1201. A party cannot request a call sign until a construction permit is issued. As with full power stations, the call letters of stations located east of the Mississippi River will begin with a “W” and west of the Mississippi will begin with a “K.”

³¹⁰ Comments of Andrew Morris at 12 (suggesting that the Commission could reduce its administrative burdens by imposing no minimum operating hours, and relying instead on the “silent station” statute); Comments of Warren Michelsen at 4 (believing that minimum operating hours discourage greater diversity by compelling stations to fill up broadcast time with canned programming, and by potentially precluding more creative broadcast startups, which may not have sufficient programming or capital to afford the longer required broadcast hours).

³¹¹ See, e.g., Comments of William T. Croghan Jr. at 9; Comments of Mid-America Broadcasting Company, Inc. at 8; Comments of Morris Broadcasting Company of New Jersey, Inc. at 9; Comments of Positive Alternative Radio, Inc. et al. at 14; Comments of University of Dayton at 9.

182. Decision. In order to ensure an effective utilization of channels, we will impose the same minimum operating hour requirements on LP100 and LP10 FM stations that we currently apply to full-power noncommercial educational FM stations. Under our rules, “[a]ll noncommercial educational FM stations are required to operate at least 36 hours per week, consisting of at least 5 hours of operation per day on at least 6 days of the week; however, stations licensed to educational institutions are not required to operate on Saturday or Sunday”³¹² These requirements are not extensive and should not impose an inordinate burden on LPFM licensees. In cases where individual parties are interested in applying for LP100 and LP10 stations but do not have sufficient programming to meet the minimum operating hour requirements, we encourage those parties to find other applicants with whom they could share the license. To accommodate those situations in which the demand for airtime does not exceed the spectrum availability, however, we will not automatically delete a station that is operating at less than the minimum hours. When another applicant comes forward that wants to utilize the underused channel, that applicant can notify the Commission of the incumbent’s failure to meet minimum hours and demand that the incumbent return its license or agree to a time-sharing arrangement that will accommodate both parties.

6. Main Studio Rule, Public File Rule and Ownership Reporting Requirements

183. Background. In the *Notice*, we invited comment on whether LPFM stations of each class should be subject to the variety of other rules in Part 73 with which full power stations must comply, including, for example, the main studio rule (47 C.F.R. § 73.1125(a)), public file rule (47 C.F.R. §§ 73.3526, 73.3527), and the periodic ownership reporting requirements (47 C.F.R. § 73.3615). Given the purposes and power levels of LP1000 stations, we tentatively concluded that LP1000 licensees should generally meet the Part 73 rules applicable to full power FM stations. However, the *Notice* sought comment on whether sufficient useful purpose would be served in applying each rule to these licensees. We were disinclined to apply these service rules to LP10 stations, and sought comment with regard to the rules appropriate for LP100 stations.

184. Comments. Comments were divided on this issue. Most broadcasters who commented on this issue agree that LPFM stations should generally follow existing regulations for full-power stations,³¹³ but some note that they should only have minimal day-to-day regulatory requirements because of the difficulty of survival if such stations had to follow the exact rules that full-power stations are required to follow.³¹⁴ Many other commenters state that the Commission should not require LPFM stations to comply with a main studio, public file or ownership reporting requirement, because of the burdens they would

³¹² See 47 C.F.R. § 73.561.

³¹³ See, e.g. Comments of NAB at 76; Comments of Buckley Broadcasting, Inc., at 16; Comments of Big City Radio, Inc. at 17; Comments of Barry Broadcasting Company at 4; Comments of Delmarva Broadcasting at 9-10.

³¹⁴ See Comments of Creative Educational Media Corporation, Inc. at 3; Comments of Mid-America Broadcasting Company at 3; Comments of Morris Broadcasting at 3; Comments of Nassau Broadcasting at 3. These commenters propose that all LPFM stations should be required to submit periodic program summary reports so that the FCC as well as the general public can verify the localized performance of all LPFM stations. REC Networks believes that all LPFM stations should maintain a public file which, for LP100 watts or less, could be placed on the internet in lieu of having a public inspection location, since many of these stations may be operated from private residences. Comments of REC Networks at 7.

impose.³¹⁵

185. Decision. We conclude that we should not impose the main studio, public file,³¹⁶ or ownership reporting requirements on LPFM stations. We believe these requirements would place an undue burden on such small noncommercial educational stations. In addition, we believe that the nature of this service will ensure that LPFM stations are responsive to their communities. This approach is consistent with our treatment of low power television stations.³¹⁷

186. As to equal employment opportunity (EEO) rules, we conclude that all LPFM licensees must comply with the Commission's long-standing prohibition against employment discrimination.³¹⁸ We believe that a finding that any broadcaster has engaged in employment discrimination raises a serious question as to its character qualifications to be a Commission licensee.³¹⁹ In addition to the prohibition against discrimination, the broadcast EEO Rule also includes EEO program requirements.³²⁰ These requirements are not currently in force.³²¹ In any event, we did not enforce compliance with the EEO program requirements by broadcast stations with fewer than five full-time employees. Because we anticipate that the vast majority of this class of licensees will employ very few (if any) full-time, paid employees, we do not intend to require LPFM licensees to comply with any EEO program requirements we adopt in our pending rulemaking proceeding.

7. Construction Permits

187. Background. In the *Notice*, the Commission proposed an 18-month construction period for

³¹⁵ See, e.g., Comments of Texas Department of Transportation at 3; Comments of Oklahoma Department of Transportation at 5 (Both believe that the micropower station licensees should be exempted from the main studio rule, the public file rule and periodic ownership reporting requirements). Ronnie Miller argues that we should impose the absolute minimum amount of regulation for smaller stations to allow for experimentation, and Gene Kirby states that LP10 should be as free of unnecessary rules, paperwork, logs, etc., as is practical. Comments of Ronnie Miller at 23; Comments of Gene Kirby at 1.

³¹⁶ As noted above, however, LPFM licensees must maintain a political file. See ¶ 175.

³¹⁷ *Report and Order* in BC Docket No. 78-253, 51 RR 2d 476 (1982) (“*Low Power Television R&O*”).

³¹⁸ See 47 C.F.R. § 73.2080(a).

³¹⁹ *Bilingual Bicultural Coalition on Mass Media, Inc. v. FCC*, 595 U.S. 621, 628-29 (D.C. Cir. 1978).

³²⁰ See 47 C.F.R. § 73.2080(b) and (c).

³²¹ The United States Court of Appeals for the District of Columbia Circuit held that the EEO program requirements of the broadcast EEO Rule are unconstitutional. *Lutheran Church - Missouri Synod v. FCC*, 141 F.3d 344, *pet. for reh'g denied*, 154 F.3d 487, *pet. for reh'g en banc denied*, 154 F.3d 494 (D.C. Cir. 1998) (“*Lutheran Church*”). The Commission has proposed and requested comment concerning a new broadcast EEO Rule and policies consistent with the D.C. Circuit's decision in *Lutheran Church*. See *Review of the Commission's Broadcast and Cable Equal Employment Opportunity Rules and Policies and Termination of the EEO Streamlining Proceeding*, 13 FCC Rcd 23004 (1998).

LP100 stations and a twelve-month limit for LP10 stations. The shorter construction time limits for LP100 and LP10 stations (relative to the three-year construction period that is allowed to full-power FM stations³²²) were meant to reflect the simpler construction requirements for these facilities. The 18- and 12-month periods also assumed that difficulties with obtaining the requisite construction permits would be minimal.

188. Comments. Many commenters state that the proposed construction periods for LP100 and LP10 stations are reasonable, given the relatively smaller facilities and simpler construction involved with these stations.³²³ Other commenters argue for even shorter construction periods for LP100 and micro-radio services.³²⁴ Some commenters thought that imposing strict construction time limits would help to prevent spectrum hoarding and help encourage the rapid deployment of the spectrum resources.³²⁵

189. Decision. We will adopt an 18-month construction period for both LP10 and LP100 services, and it will be strictly enforced. While we believe that most permittees will be able to and will have ample incentive to construct their low power stations in far less than 18 months, given the relative technical simplicity of LP100 and LP10 stations, we do not wish to burden applicants who may encounter unforeseen difficulties with a shorter construction period. We recognize that while the facilities themselves will be relatively easy to construct, zoning and permitting processes may, in some cases, delay construction. However, we expect that applicants will have well-considered proposals in this regard and we do not intend to grant extensions to the construction permits.³²⁶ Therefore, to avoid the complications and delays of extension rulings, as well as to encourage well-planned and executed proposals, we have allowed what we consider to be more than ample time for permittees to complete construction and begin operation, and we expect to see many stations in operation long before the allowed 18 months.

8. Emergency Alert System

190. Background. In the *Notice*, we proposed to treat LP1000 facilities like full-power FM stations for the purposes of the Emergency Alert System (EAS). We explained that, in this way, we would

³²² See Report and Order in MM Dockets Nos. 98-43 and 94-149, FCC 98-281 (released November 25, 1998) ("*Non-Technical Broadcasting Streamlining R&O*"), providing a three year construction period for new radio stations.

³²³ See, e.g., Comments of the Texas Department of Transportation at 5; Comments of the Oklahoma Department of Transportation at 4 (supporting the proposed construction limit).

³²⁴ Comments of REC Networks at 7 (arguing for a 12-month construction period); Comments of the Lawyers Guild at 37 (arguing for construction periods of 10 months and 9 months for LP100 and LP10, respectively, reasoning that "these stations should be fairly inexpensive and relatively easy to put on the air.").

³²⁵ See, e.g., Comments of Andrew Morris at 12 (arguing that a designated construction period helps to guarantee use of the spectrum by a set date.); Comments of Joshua Weiss at 1 (arguing that licensees should be precluded from hoarding construction permits).

³²⁶ LPFM permittees will be eligible for tolling of the construction period pursuant to our rules and consistent with Section 319(b) of the statute. See 47 U.S.C. §319.

expect to avoid having significant numbers of people deprived of this critical information resource. By contrast, because of their extremely small coverage areas and correspondingly sized audiences, as well as their limited resources, we proposed that LP10 stations, if authorized, not be required to participate in the EAS. We sought comment on these proposals and also on how LP100 stations, with their intermediate size and audience reach, should fit into the EAS structure.

191. Comments. Some commenters argue that compliance should not be required for LP100 or LP10 stations because small operations and coverage areas make compliance unnecessary and too expensive;³²⁷ stations other than LP100 and LP10 stations can take on the role of alerting the community to emergencies;³²⁸ the short range and secondary status of LP100 stations make them unsuitable for emergency message propagation;³²⁹ and removing LP100 stations from the air during national emergencies would help prevent interference during such crisis times.³³⁰ Other commenters suggest that EAS be required only under certain circumstances.³³¹ A few commenters provide suggestions on how to overcome the expense involved in EAS participation.³³² Finally, Andrew Morris and William T. Croghan, Jr. assert that LP100 stations should not be required to use EAS encoders because these stations only broadcast to listeners, not to EAS participants that would use encoded information.³³³

192. Other commenters, however, stress the importance of participation in EAS by all broadcast stations.³³⁴ NAB and John D. Bowker argue that LP100 stations should not be excluded from

³²⁷ See Comments of Gene Kirby at 1; Comments of Morris Broadcasting Co. at 9; Comments of Gary L. Nixon at 2, Comments of Stanley L. Sarch at 1; Comments of Creative Educational Media Corp. at 10; Comments of John R. Benjamin and Charles Coplien at 5; Comments of Spencer Graddy Clark at 5.

³²⁸ Comments of the Oklahoma Department of Transportation at 5; Comments of the Texas Department of Transportation at 5.

³²⁹ Comments of Andrew Morris at 13.

³³⁰ Comments of Andrew Morris at 13; Comments of REC Networks at 7.

³³¹ See, e.g., Comments of Ronnie V. Miller at 22 (not opposed to voluntary compliance for LP100 stations); Comments of REC Network at 17 (supports voluntary compliance for LP100 stations); Comments of Robert J. Wertime at 2 (believes EAS should include automatic deference to local FM stations, if not fully implementable at an LPFM station); Comments of Roger P. Doering at 1 (believes that LPFM should shut down in an alert, unless a full power station is disabled); Comments of John A. Crutti, Jr. at 1 (believes that LP100 stations should be exempt from EAS compliance, except where full-power stations are not present in local areas to provide EAS); Comments of Andrew Morris at 13 (same as John A. Crutti, Jr.).

³³² See Comments of Douglas E. Smith at 4-5 (suggests that LPFM could use equipment, which is available at a modest cost (less than \$100), to detect EAS codes originated by the National Weather Service and that it would not be excessively burdensome to require LPFMs to monitor their area's local primary station for EAN, and to go off the air if it is received, returning only after EAT is issued); Comments of Robert Zukowski at 2 (suggests that an economical way for LPFM stations to participate in EAS is to rebroadcast a full power station's EAS messages).

³³³ Comments of Andrew Morris at 13; Comments of William T. Croghan, Jr. at 10.

³³⁴ See Comments of Barry Broadcasting Co. at 4; Comments of Buckley Broadcasting Corp. at 16; (continued....)

EAS system requirements because listeners will be unaware that they will not receive the emergency warnings from LPFM stations that they have come to expect from radio stations.³³⁵ West End Radio asserts that LPFM stations should be required to participate in EAS because Americans who live in remote areas would be put in jeopardy if they cannot receive any kind of emergency alert.³³⁶ Aaron Read argues that the costs of EAS are not too heavy a financial burden (average \$1600), and for an EAS system in general to work, all broadcast services must participate. Read further argues that Congress has mandated participation in EAS for all broadcast services, which would include LPFM stations.³³⁷ Noting that the minimum facility Class A FM station operating at 100 watts must participate in the EAS, Wright Broadcasting argues that exempting LP100 stations from participation is discriminatory.³³⁸

193. Decision. We conclude that LPFM stations should be required to participate in the EAS structure, but in a modified way. Our requirements will balance the cost of compliance, the ability of stations to meet that cost, and the needs of the listening public to be alerted in emergency situations. LPFM licensees will be able to satisfy our EAS requirements if they install and operate Commission-certified decoding equipment, which will alert station personnel to emergency alerts. Once that decoding equipment is installed, station personnel must pass any national emergency audio message on to listeners as prescribed in our rules. As is the case for full service broadcasters, LPFM participation at the state and local levels will be on a voluntary basis.

194. The EAS is composed of several entities, including FM broadcast stations, LPTV stations, and cable systems operating on an organized basis at the national, state, and local levels.³³⁹ The EAS alert is designed to make viewers and listeners aware of emergencies that may affect them so that they may take appropriate protective action or seek additional information.³⁴⁰ Though the arguments of financial hardship

³³⁹ 47 C.F.R. § 11.11(a).

³⁴⁰ EAS relies on equipment that provides emergency alerts via a digital signaling process. Amendment of Part 73, Subpart G, of the Commission's Rules Regarding the Emergency Broadcast System, FO Docket Nos. 91-171 and 91-301, *Third Report and Order*, 14 FCC Rcd 1273, 1274, ¶ 2 (1998); see Amendment of Part 73, Subpart G, of the Commission's Rules Regarding the Emergency Broadcast System, FO Docket Nos. 91-171 and 91-301, *Report and Order and Further Notice of Proposed Rulemaking*, 10 FCC Rcd 1786 (1994) (*EAS First Report and Order*). EAS equipment transmits a message that is generally no longer than two minutes in length and at a minimum, provides the viewer with the reason or event posing a threat, the location that the event may be affecting, the approximate time period that a threat to safety will last, and the originator of the alert message. *Id.* at ¶ 2, n. 4. National level EAS messages and EAS tests must be forwarded to the public upon receipt. EAS participants transmit state and local messages on a voluntary basis. *Id.* at ¶ 2.

for LPFM licensees to implement the EAS are well taken, alert messages are potentially important to all listeners and viewers, and commenters do not persuade us that the LPFM stations should, as a class, be exempted from this important public safety function. We will, however, minimize the cost of effective participation for LPFM licensees. Accordingly, we amend section 11.11(a) to include LPFM stations in the list of the EAS entities. We also amend the Broadcast Station Timetable of section 11.11(a) to set out the requirements for LPFM.

195. While we will require EAS participation, we will exempt LPFM stations from purchasing some of the EAS equipment required for other participants under our rules. In general, EAS equipment must be able to perform the functions described in all of our rules regulating EAS.³⁴¹ However, we relaxed some of these requirements for Class D noncommercial educational FM and LPTV stations.³⁴² Because LPFM stations will also provide service to small audiences, we exempt LPFM stations from the requirement to install and operate encoders. We believe that the cost to LPFM licensees of installing and operating both encoding and decoding equipment outweighs the benefits that these small stations could provide to the public.³⁴³

196. While we are not requiring LPFM stations to install encoding equipment, all LPFM stations are required to use decoding equipment that notifies the station in case of any emergency. We recognize that there will be costs associated with EAS decoders, but believe the costs are justified. Current Commission-certified integrated encoder/decoder equipment costs \$1,500 or more depending on the options a station wants to install. We note that today's manufacturers only produce certified encoders and decoders as integrated units, as that is the only demand that exists. Noncertified decoding equipment, however, is currently available and is advertised in some places for as little as \$650.³⁴⁴ Thus, it appears that Commission-certified decoding equipment should be available for well under \$1000 and should be able to

³⁴¹ Specifically, EAS equipment must be able to perform the functions described in sections 11.31, 11.32, 11.33, 11.51, 11.52, and 11.61 of our rules.

³⁴² Class D noncommercial educational FM and LPTV stations are not required to install or operate encoders as defined in section 11.32,³⁴² to have equipment capable of generating the EAS codes and Attention Signal specified in section 11.31, or to perform certain parts of EAS tests.

³⁴³ Accordingly, we amend section 11.11(b) to provide that LPFM stations, as defined herein, are not required to comply with section 11.32. Because LPFM stations are not required to install or operate encoders, we amend section 11.51(e) to provide that LPFM stations are not required to have equipment capable of generating the EAS codes and Attention Signal specified in section 11.31. Because we are not requiring LPFM stations to install equipment capable of generating the EAS codes and Attention Signal, we amend the last sentence of section 11.61(a)(1)(v) to require Class D noncommercial educational FM, LPTV, and LPFM stations to transmit only the test script of this monthly test. Monthly tests are required of the EAS header codes, Attention Signal, Test Script and EOM code, but Class D noncommercial educational FM and LPTV stations are only required to transmit the Test Script. In addition, we amend section 11.61(a)(2)(ii)(E)(2)(iii) to provide that Class D noncommercial educational FM, LPTV, and LPFM stations are not required to transmit this digital test, but must log receipt. Class D noncommercial educational FM and LPTV stations are not required to transmit weekly tests of the EAS header and EOM codes.

³⁴⁴ Such equipment is used, for instance, by police or fire departments to monitor the Emergency Alert System.

reach the market in the near future. Accordingly, we will require the use of Commission-certified EAS decoders or decoder/encoders by all LPFM stations when they commence operations. It will be several months before the first LPFM stations are on the air. Given that decoders are already on the market, this should be ample time to obtain Commission certification and make certified units available for purchase. If certified decoder equipment is not available at that time, we can grant a temporary exemption for LPFM stations until such time as it is reasonably available. Once the licensee has installed decoding equipment, if the station is on the air at the time it receives a national emergency alert message, station personnel must pass the information along to listeners.³⁴⁵

197. Finally, we will continue to grant waivers of EAS requirements to broadcasters, including LPFM licensees, on a case-by-case basis in appropriate circumstances upon a sufficient showing of need. As we outlined in the *EAS First Report and Order*, the waiver request must contain at least the following: (1) justification for waiver, with reference to the particular rule sections for which a waiver is sought; (2) information about the financial status of the entity, such as a balance sheet and income statement for up to the previous two years (audited, if possible); (3) the number of other entities that serve the requesting entity's coverage area and that have or are expected to install EAS equipment; and (4) the likelihood (such as proximity or frequency) of hazardous risks to the requesting entity's audience.³⁴⁶

III. CONCLUSION

198. In this *Report and Order*, we set the stage for a new dimension in radio broadcasting, creating additional, affordable outlets for the expression of views and the provision of information and entertainment to local communities. By limiting participants in this service to noncommercial, educational organizations, we hope to ensure that this service will meet needs unmet by the commercial radio service. Through eligibility requirements, selection preference factors, and the relatively small range of LPFM stations, we hope to create a service that will serve the distinct needs of small local communities. Mindful of the need to protect the technical integrity of the existing radio service and to preserve its potential transition to digital service, however, we are proceeding cautiously. Accordingly, we are limiting radio stations in the LPFM service to a maximum of 100 watts. We are also maintaining 2nd-adjacent channel protection. Based on our engineers' careful review of the technical data submitted to the Commission, as well as their own studies, we are confident that any risk of interference is small and, on balance, outweighed by the benefits this new service will bring.

³⁴⁵ Accordingly, we amend section 11.53(a)(3) of our rules to require LPFM stations to disseminate the national audio message to all subscribers if it is received via wire services.

³⁴⁶ *EAS First Report and Order*, 10 FCC Rcd at 1830, ¶ 123.

ADMINISTRATIVE MATTERS

199. Paperwork Reduction Act Analysis. This *Report and Order* has been analyzed with respect to the Paperwork Reduction Act of 1995, and found to impose new or modified reporting and recordkeeping requirements or burdens on the public. Implementation of these new or modified reporting and recordkeeping requirements will be subject to approval by the Office of Management and Budget as prescribed by the Act.

200. Regulatory Flexibility Analysis. Pursuant to the Regulatory Flexibility Act of 1980, as amended, 5 U.S.C. § 601, the Commission's Final Regulatory Flexibility Analysis for this *Report and Order* is attached as Appendix C.

201. Additional Information. For additional information on this proceeding, please contact Julie Barrie, Policy and Rules Division, Mass Media Bureau, (202) 418-2130.

ORDERING CLAUSES

202. Accordingly, IT IS ORDERED that, pursuant to authority contained in sections 1, 4(i), 303 of the Communications Act of 1934, as amended, 47 U.S.C. §§ 151, 154(i), 303, Part 73 of the Commission's rules, 47 C.F.R. Part 73, IS AMENDED as set forth in Appendix A below.

203. IT IS FURTHER ORDERED that, the amendments set forth in Appendix A shall be effective 60 days after publication in the Federal Register.

204. IT IS FURTHER ORDERED that the Commission's Consumer Information Bureau, Reference Information Center, shall send a copy of this *Report and Order*, including the Final Regulatory Flexibility Act Analysis, to the Chief Counsel for the Small Business Administration.

205. IT IS FURTHER ORDERED that this proceeding IS TERMINATED.

FEDERAL COMMUNICATIONS COMMISSION

Magalie Roman Salas
Secretary

APPENDIX A

Low Power FM Service Rules

Part 11 of Title 47 of the U.S. Code of Federal Regulations is amended to read as follows:

Part 11 – Emergency Alert System (EAS)

1. The authority citation for Part 11 continues to read as follows:

Authority 47 U.S.C. 151, 154(i) and (o), 303(r), 544(g) and 606.

2. Section 11.11 is amended to read as follows:

§11.11 The Emergency Alert System (EAS).

(a) The EAS is composed of broadcast networks; cable networks and program suppliers; AM, FM, Low Power FM (LPFM) and TV broadcast stations; Low Power TV (LPTV) stations; cable systems; wireless cable systems which may consist of Multipoint Distribution Service (MDS), Multichannel Multipoint Distribution Service (MMDS), or Instructional Television Fixed Service (ITFS) stations; and other entities and industries operating on an organized basis during emergencies at the National, State and local levels. It requires that at a minimum all participants use a common EAS protocol, as defined in § 11.31, to send and receive emergency alerts in accordance with the effective dates in the following tables:

A new column is inserted into the “Timetable – Broadcast Stations” table in §11.11 as follows:

Requirement	AM & FM	TV	FM Class D	LPTV	LPFM
* * *	* * *	* * *	* * *	* * *	N Y Y N Y

(b) Class D noncommercial educational FM stations as defined in § 73.506, LPFM stations as defined in §§ 73.811 and 73.853, and LPTV stations as defined in § 74.701(f) are not required to comply with §11.32. * * *

* * * * *

3. Section 11.51 is amended to read as follows:

§11.51 EAS code and Attention Signal Transmission requirements.

* * * * *

(e) Class D non-commercial educational FM stations as defined in §73.506 of this chapter, Low Power FM (LPFM) stations as defined in §§ 73.811 and 73.853 of this chapter, and low power TV (LPTV) stations as defined in §74.701(f) of this chapter are not required to have equipment capable of generating the EAS codes and Attention Signal specified in § 11.31. * * *

* * * * *

4. Section 11.53 is amended to read as follows:

§11.53 Dissemination of Emergency Action Notification.

(a) * * *

(1) * * *

(2) * * *

(3) Wire services to all subscribers (AM, FM, low power FM (LPFM), TV, LPTV and other stations.)

* * * * *

5. Section 11.61 is amended to read as follows:

§11.61 Tests of EAS procedures.

(a)(1)(i) * * *

(a)(1)(v) * * * Class D non-commercial educational FM, LPFM and LPTV stations are required to transmit only the test script. * * *

(a)(2) * * *

(a)(2)(ii)(E)(iii) Class D non-commercial educational FM, LPFM and LPTV stations are not required to transmit this test but must log receipt. * * *

* * * * *

Part 73 of Title 47 of the U.S. Code of Federal Regulations is amended to read as follows:

Part 73 – Radio Broadcast Services

1. The authority citation for Part 73 continues to read as follows:

Authority: 47 U.S.C. 154, 303, 334, 336

2. Section 73.209 is amended to include a new section (c), as follows

§ 73.209 Protection from interference.

* * * * *

(c) Permittees and licensees of FM stations are not protected from interference which may be created by the grant of a new LPFM station or of authority to modify an existing LPFM station, except in instances where the FM station would receive predicted interference from an LPFM station within the FM station's 3.16 mV/m (70 dBu) contour.

3. Section 73.508 is modified, as follows:

§ 73.508 Standards of good engineering practice.

(a) All noncommercial educational stations and LPFM stations operating with more than 10 watts transmitter power output shall be subject to all of the provisions of the FM Technical Standards contained in Subpart B of this part. Class D educational stations and LPFM stations operating with 10 watts or less transmitter output power shall be subject to the definitions contained in § 73.310 of Subpart B of this part, and also to those other provisions of the FM Technical Standards which are specifically made applicable to them by the provisions of this subpart.

(b) The transmitter and associated transmitting equipment of each noncommercial educational FM station and LPFM station licensed for transmitter power output above 10 watts must be designed, constructed and operated in accordance with § 73.317.

(c) The transmitter and associated transmitting equipment of each noncommercial educational FM station licensed for transmitter power output of 10 watts or less, although not required to meet all requirements of § 73.317, must be constructed with the safety provisions of the current national electrical code as approved by the American National Standards Institute. These stations must be operated, tuned, and adjusted so that emissions are not radiated outside the authorized band causing or which are capable of causing interference to the communications of other stations. The audio distortion, audio frequency range, carrier hum, noise level, and other essential phases of the operation which control the external effects, must be at all times capable of providing satisfactory broadcast service. Studio equipment properly covered by an underwriter's certificate will be considered as satisfying safety requirements.

4. A new Section 73.514 is added, as follows

§ 73.514 Protection from interference.

Permittees and licensees of NCE FM stations are not protected from interference which may be created by the grant of a new LPFM station or of authority to modify an existing LPFM station, except in instances where the NCE FM station would receive interference from an LPFM station within the 3.16 mV/m (70 dBu) contour.

5. “Subpart G – Emergency Broadcast System” is deleted in its entirety (including Section 73.900).

6. A new “Subpart G – Low Power FM Broadcast Stations” is added as follows:

Subpart G – Low Power FM Broadcast Stations (LPFM)

7. A new Section 73.801 is added, as follows:

§ 73.801 Broadcast regulations applicable to LPFM stations.

The following rules are applicable to LPFM stations:

Section 73.201-Numerical definition of FM broadcast channels.

Section 73.220-Restrictions on use of channels.

Section 73.267-Determining operating power.

Section 73.277-Permissible transmissions.

Section 73.297-FM stereophonic sound broadcasting.

Section 73.310-FM technical definitions.

Section 73.312-Topographic data.

Section 73.318-FM blanketing interference.

Section 73.322-FM stereophonic sound transmission standards.

Section 73.333-Engineering charts.

Section 73.503-Licensing requirements and service.

Section 73.508-Standards of good engineering practice.

Section 73.593-Subsidiary communications services.

Section 73.1015-Truthful written statements and responses to Commission inquiries and correspondence.

Section 73.1030-Notifications concerning interference to radio astronomy, research and receiving installations.

Section 73.1201-Station identification.

Section 73.1206-Broadcast of telephone conversations.

Section 73.1207-Rebroadcasts.

Section 73.1208-Broadcast of taped, filmed, or recorded material.

Section 73.1210-TV/FM dual-language broadcasting in Puerto Rico.

Section 73.1211-Broadcast of lottery information.

Section 73.1212-Sponsorship identification; list retention; related requirements.

Section 73.1213-Antenna structure, marking and lighting.

Section 73.1216-Licensee-conducted contests.

Section 73.1217-Broadcast hoaxes.

Section 73.1230-Posting of station license.

Section 73.1250-Broadcasting emergency information.

Section 73.1300-Unattended station operation.

Section 73.1400-Transmission system monitoring and control.

Section 73.1520-Operation for tests and maintenance.

Section 73.1540-Carrier frequency measurements.

Section 73.1545-Carrier frequency departure tolerances.

Section 73.1570-Modulation levels: AM, FM, and TV aural.
Section 73.1580-Transmission system inspections.
Section 73.1610-Equipment tests.
Section 73.1620-Program tests.
Section 73.1650-International agreements.
Section 73.1660-Acceptability of broadcast transmitters.
Section 73.1665-Main transmitters.
Section 73.1692-Broadcast station construction near or installation on an AM broadcast tower.
Section 73.1745-Unauthorized operation.
Section 73.1750-Discontinuance of operation.
Section 73.1920-Personal attacks.
Section 73.1940-Legally qualified candidates for public office.
Section 73.1941-Equal opportunities.
Section 73.1943-Political file.
Section 73.1944-Reasonable access.
Section 73.3511-Applications required.
Section 73.3512-Where to file; number of copies.
Section 73.3513-Signing of applications.
Section 73.3514-Content of applications.
Section 73.3516-Specification of facilities.
Section 73.3517-Contingent applications.
Section 73.3518-Inconsistent or conflicting applications.
Section 73.3519-Repetitious applications.
Section 73.3520-Multiple applications.
Section 73.3525-Agreements for removing application conflicts.
Section 73.3539-Application for renewal of license.
Section 73.3542-Application for emergency authorization.
Section 73.3545-Application for permit to deliver programs to foreign stations.
Section 73.3550-Requests for new or modified call sign assignments.
Section 73.3561-Staff consideration of applications requiring Commission consideration.
Section 73.3562-Staff consideration of applications not requiring action by the Commission.
Section 73.3566-Defective applications.
Section 73.3568-Dismissal of applications.
Section 73.3584-Procedure for filing petitions to deny.
Section 73.3587-Procedure for filing informal objections.
Section 73.3588-Dismissal of petitions to deny or withdrawal of informal objections.
Section 73.3589-Threats to file petitions to deny or informal objections.
Section 73.3591-Grants without hearing.
Section 73.3593-Designation for hearing.
Section 73.3598-Period of construction.
Section 73.3599-Forfeiture of construction permit.
Section 73.3999-Enforcement of 18 U.S.C. 1464-restrictions on the transmission of obscene and indecent material.

8. A New Section 73.805 is added, as follows:

§ 73.805 Availability of channels.

Except as provided in Section 73.220 of this Chapter, all of the frequencies listed in Section 73.201 of this Chapter are available for LPFM stations.

9. A new Section 73.807 is added, as follows:

§73.807 Minimum distance separation between stations.

Minimum separation requirements for LP100 and LP10 stations, as defined in Section 73.811 and Section 73.853 of this Part, are listed in the following subsections. An LPFM station will not be authorized unless these separations are met. Minimum distances for co-channel and first-adjacent channel are separated into two columns. The left-hand column lists the required minimum separation to protect other stations and the right-hand column lists (for informational purposes only) the minimum distance necessary for the LPFM station to receive no interference from other stations. For second-adjacent channels and IF channels, the required minimum distance separation is sufficient to avoid interference received from other stations.

(a) An LP100 station will not be authorized initially unless the minimum distance separations in the following table are met with respect to authorized FM stations, timely-filed applications for new and existing FM stations, authorized LP100 stations, LP100 station applications that were timely-filed within a previous window, and vacant FM allotments. LP100 stations are not required to protect LP10 stations. LPFM modification applications must either meet the distance separations in the following table or, if short-spaced, not lessen the spacing to subsequently authorized stations.

Station Class Protected by LP100	Co-channel Minimum Separation (km)		First-adjacent Channel Minimum Separation (km)		Second-adjacent Channel Minimum Separation (km)	I.F . Channel minimum separations
	Required	For No Interference Received	Required	For No Interference Received	Required	10.6 or 10.8 MHz
LP100	24	24	14	14	None	None
D	24	24	13	13	6	4
A	67	92	56	56	29	7
B1	87	119	74	74	46	9
B	112	143	97	97	67	12
C3	78	119	67	67	40	9
C2	91	143	80	84	53	12
C1	111	178	100	111	73	20
C	130	203	120	142	93	28

(b) An LP10 station will not be authorized unless the minimum distance separations in the following table are met with respect to authorized FM stations, timely-filed applications for new and existing FM stations, vacant FM allotments, or LPFM stations.

Station Class Protected by LP10	Co-channel Minimum Separation (km)		First-adjacent Channel Minimum Separation (km)		Second-adjacent Channel Minimum Separation (km)	I.F . Channel minimum separations 10.6 or 10.8 MHz
	Interference Required	For No Received	Required	For No Interference Received	Required	
LP100	16	22	10	11	None	None
LP10	13	13	8	8	None	None
D	16	21	10	11	6	2
A	59	90	53	53	29	5
B1	77	117	70	70	45	8
B	99	141	91	91	66	11
C3	69	117	64	64	39	8
C2	82	141	77	81	52	11
C1	103	175	97	108	73	18
C	122	201	116	140	92	26

(c) In addition to meeting or exceeding the minimum separations for Class LP100 and Class LP10 stations in subsections (a) and (b) of this rule section above, new LP100 and LP10 stations will not be authorized in Puerto Rico or the Virgin Islands unless the minimum distance separations in the following tables are met with respect to authorized or proposed FM stations:

(1) LP100 stations in Puerto Rico and the Virgin Islands:

Station Class Protected by LP100	Co-channel Minimum Separation (km)		First-adjacent Channel Minimum Separation (km)		Second-adjacent Channel Minimum Separation (km)	I.F . Channel minimum separations 10.6 or 10.8 MHz
	Interference Required	For No Received	Required	For No Interference Received	Required	
A	80	111	70	70	42	9
B1	95	128	82	82	53	11
B	138	179	123	123	92	20

(2) LP10 stations in Puerto Rico and the Virgin Islands:

Station Class Protected by LP10	Co-channel Minimum Separation (km)		First-adjacent Channel Minimum Separation (km)		Second-adjacent Channel Minimum Separation (km)	I.F . Channel minimum separations 10.6 or 10.8 MHz
	Interference Required	For No Received	Required	For No Interference Received	Required	
A	72	108	66	66	42	8
B1	84	125	78	78	53	9
B	126	177	118	118	92	18

Note: Minimum distance separations towards “grandfathered” superpowered Reserved Band stations, subsections (a), (b), and (c) above :

Full service FM stations operating within the reserved band (Channels 201-220) with facilities in excess of those permitted in § 73.211(b)(1) or § 73.211(b)(3) shall be protected by LPFM stations in accordance with the minimum distance separations for the nearest class as determined under § 73.211. For example, a Class B1 station operating with facilities that result in a 60 dBu contour that exceeds 39 kilometers but is less than 52 kilometers would be protected by the Class B minimum distance separations. Class D stations with 60 dBu contours that exceed 5 kilometers will be protected by the Class A minimum distance separations. Class B stations with 60 dBu contours that exceed 52 kilometers will be protected as Class C1 or Class C stations depending upon the distance to the 60 dBu contour. No stations will be protected beyond Class C separations.

(d) In addition to meeting the separations in subsections (a) through (c) above, LPFM applications must meet the minimum separation requirements in the following tables with respect to authorized FM translator stations, cutoff FM translator applications, and FM translator applications filed prior to the release of the Public Notice announcing the LPFM window period:

(1) LP100 stations:

Distance to FM Translator 60 dBu Contour	Co-channel Minimum Separation (km)		First-adjacent Channel Minimum Separation (km)		Second-adjacent Channel Minimum Separation (km)	I.F . Channel Minimum Separation (km)
	For No Interference Required	No Received	For No Interference Required	No Received		
13.3 km or greater	39	67	28	35	21	5
Greater than 7.3 km, but less than 13.3 km	32	51	21	26	14	5
Less than 7.3 km	26	30	15	16	8	5

(2) LP10 stations:

Distance to FM Translator 60 dBu Contour	Co-channel Minimum Separation (km)		First-adjacent Channel Minimum Separation (km)		Second-adjacent Channel Minimum Separation (km)	I.F . Channel Minimum Separation (km)
	For No Interference Required	No Received	For No Interference Required	No Received		
13.3 km or greater	30	65	25	33	20	3
Greater than 7.3 km, but less than 13.3 km	24	49	18	23	14	3
Less than 7.3 km	18	28	12	14	8	3

(f) Existing Class LP100 and LP10 stations which do not meet the separations in the tables in subsections (a) through (e) above may be relocated provided that the separation to any short-

spaced station is not reduced.

(g) Commercial and noncommercial educational stations authorized under Subparts B and C of this Part, as well as new or modified commercial FM allotments, are not required to adhere to the separations specified in this rule section, even where new or increased interference would be created.

(h) *International considerations within the border zones*

(1) Within 320 km of the Canadian border, LP100 stations must meet the following minimum separations with respect to any Canadian stations:

Canadian Station Class	Co-channel (km)	First-Adjacent Channel (km)	Second-Adjacent Channel (km)	Third-Adjacent Channel (km)	Intermediate Frequency (IF) Channel (km)
A1	45	30	21	20	4
A	66	50	41	40	7
B1	78	62	53	52	9
B	92	76	68	66	12
C1	113	98	89	88	19
C	118	106	99	98	28

(2) Within 320 km of the Mexican border, LP100 stations must meet the following separations with respect to any Mexican stations:

Mexican Station Class	Co-channel (km)	First-Adjacent Channel (km)	Second- /Third-Adjacent Channel (km)	Intermediate Frequency (IF) Channel (km)
A	43	32	25	5
AA	47	36	29	6
B1	67	54	45	8
B	91	76	66	11
C1	91	80	73	19
C	110	100	92	27

(3) Within 320 km of the Canadian border, LP10 stations must meet the following minimum separations with respect to any Canadian stations:

Canadian Station Class	Co-channel (km)	First-Adjacent Channel (km)	Second-Adjacent Channel (km)	Third-Adjacent Channel (km)	Intermediate Frequency (IF) Channel (km)
A1	33	25	23	19	3
A	53	45	43	39	5
B1	65	57	55	51	8

B	79	71	70	66	11
C1	101	93	91	87	18
C	108	102	100	97	26

- (4) Within 320 km of the Mexican border, LP10 stations must meet the following separations with respect to any Mexican stations:

Mexican Station Class	Co-channel (km)	First-Adjacent Channel (km)	Second- /Third-Adjacent Channel (km)	Intermediate Frequency (IF) Channel (km)
A	34	29	24	5
AA	39	33	29	5
B1	57	50	45	8
B	79	71	66	11
C1	83	77	73	18
C	102	96	92	26

- (5) The Commission will notify the International Telecommunications Union (ITU) of any LPFM authorizations in the US Virgin Islands. Any authorization issued for a US Virgin Islands LPFM station will include a condition that permits the Commission to modify, suspend or terminate without right to a hearing if found by the Commission to be necessary to conform to any international regulations or agreements.
- (6) The Commission may, at its option, initiate international coordination of a LPFM proposal even where the above Canadian and Mexican spacing tables are met, if it appears that such coordination is necessary to maintain compliance with international agreements.

10. A new Section 73.808 is added, as follows;

§ 73.808 Distance computations.

For the purposes of determining compliance with any LPFM distance requirements, distances shall be calculated in accordance with § 73.208(c) of this Part.

11. A new Section 73.809 is added as follows:

§ 73.809 Interference protection to full service FM stations.

- (a) It shall be the responsibility of the licensee of an LPFM station to correct at its expense any condition of interference to the direct reception of the signal of any subsequently authorized commercial or NCE FM station that operates on the same channel, first-adjacent channel, second-adjacent channel or intermediate frequency (IF) channels as the LPFM station, where interference is predicted to occur and actually occurs within the 3.16 mV/m (70 dBu) contour of such stations. Predicted interference within this contour shall be calculated in accordance with the ratios set forth in Section 73.215(a)(1) and (2) of this Part. Actual interference will be considered to occur whenever reception of a regularly used signal is impaired by the signals radiated by the LPFM station.
- (b) An LPFM station will be provided an opportunity to demonstrate in connection with the

procession of the commercial or NCE FM application that interference with the 3.16 mV/m contour of such station is unlikely. If the LPFM station fails to so demonstrate, it will be required to cease operations upon the commencement of program tests by the commercial or NCE FM station.

- (c) Complaints of actual interference by an LPFM station subject to subsection (b) within the 3.16 mV/m contour of a commercial or NCE FM station must be served on the LPFM licensee and the Federal Communications Commission, attention Audio Services Division. The LPFM station must suspend operations within twenty-four hours of the receipt of such complaint unless the interference has been resolved to the satisfaction of the complainant on the basis of suitable techniques. An LPFM station may only resume operations at the direction of the Federal Communications Commission. If the Commission determines that the complainant has refused to permit the LPFM station to apply remedial techniques that demonstrably will eliminate the interference without impairment of the original reception, the licensee of the LPFM station is absolved of further responsibility.
- (d) It shall be the responsibility of the licensee of an LPFM station to correct any condition of interference that results from the radiation of radio frequency energy outside its assigned channel. Upon notice by the FCC to the station licensee or operator that such interference is caused by spurious emissions of the station, operation of the station shall be immediately suspended and not resumed until the interference has been eliminated. However, short test transmissions may be made during the period of suspended operation to check the efficacy of remedial measures.
- (e) In each instance where suspension of operation is required, the licensee shall submit a full report to the FCC in Washington, D.C., after operation is resumed, containing details of the nature of the interference, the source of the interfering signals, and the remedial steps taken to eliminate the interference.

12. A new section 73.811 is added as follows:

§ 73.811 LPFM Power and antenna height requirements.

a) LP100 Stations:

- 1) *Maximum Facilities.* LP100 stations will be authorized to operate with maximum facilities of 100 watts effective radiated power (ERP) at 30 meters antenna height above average terrain (HAAT). An LP100 station with a HAAT that exceeds 30 meters will not be permitted to operate with an ERP greater than that which would result in a 60 dBu contour of 5.6 kilometers. In no event will an ERP less than one watt be authorized. No facility will be authorized in excess of one watt ERP at 450 meters HAAT.
- 2) *Minimum facilities.* LP100 stations may not operate with facilities less than 50 watts ERP at 30 meters HAAT or the equivalent necessary to produce a 60 dBu contour that extends at least 4.7 kilometers.

b) LP10 Stations:

- 1) *Maximum Facilities.* LP10 stations will be authorized to operate with maximum facilities of 10 watts ERP at 30 meters HAAT. An LP10 station with a HAAT that exceeds 30 meters will not be permitted to operate with an ERP greater than that which would result in a 60 dBu contour of 3.2 kilometers. In no event will an ERP less than one watt be authorized. No

facility will be authorized in excess of one watt ERP at 100 meters HAAT.

2) *Minimum Facilities.* LP10 stations may not operate with less than one watt ERP.

13. A new Section 73.812 is added, as follows:

§73.812 Rounding of power and antenna heights.

- (a) Effective radiated power (ERP) will be rounded to the nearest watt on LPFM authorizations.
- (b) Antenna radiation center, antenna height above average terrain (HAAT), and antenna supporting structure height will all be rounded to the nearest meter on LPFM authorizations.

14. A new section 73.813 is added, as follows:

§ 73.813 Determination of antenna height above average terrain (HAAT).

HAAT determinations for LPFM stations will be made in accordance with the procedure detailed in § 73.313(d) of this Part.

15. A new Section 73.816 is added, as follows:

§73.816 Antennas.

- (a) Directional antennas will not be authorized in the LPFM service.
- (b) Permittees and licensees may employ nondirectional antennas with horizontal only polarization, vertical only polarization, circular polarization or elliptical polarization.

16. A new Section 73.825 is added, as follows:

§73.825 Protection to Reception of TV Channel 6

LPFM stations will be authorized on Channels 201 through 220 only if the pertinent minimum separation distances in the following table are met with respect to all TV Channel 6 stations.

FM Channel Number	Class LP100 to TV Channel 6 (km)	Class LP10 to TV Channel 6 (km)
201	219	171
202	204	162
203	188	156
204	179	153
205	167	149
206	156	143
207	151	141
208	151	141
209	151	141
210	151	141
211	151	141
212	149	140
213	147	139
214	145	138
215	143	137
216	142	136
217	142	136
218	139	134
219	137	134
220	136	133

17. A new Section 73.840 is added, as follows:

§ 73.840 Operating power and mode tolerances.

The transmitter power output (TPO) of an LPFM station must be determined by the procedures set forth in Section 73.267 of this Part. The operating TPO of an LPFM station with an authorized TPO of more than ten watts must be maintained as near as practicable to its authorized TPO and may not be less than 90% of the minimum TPO nor greater than 105% of the maximum authorized TPO. An LPFM station with an authorized TPO of ten watts or less may operate with less than the authorized power, but not more than 105% of the authorized power.

18. A new Section 73.845 is added, as follows

§ 73.845 Transmission system operation.

Each LPFM licensee is responsible for maintaining and operating its broadcast station in a manner that complies with the technical rules set forth elsewhere in this Part and in accordance with the terms of the station authorization. In the event that an LPFM station is operating in a manner that is not in compliance with the technical rules set forth elsewhere in this part or the terms of the station authorization, broadcast operation must be terminated within three hours.

19. A new Section 73.850 is added, as follows:

§ 73.850 Operating schedule.

(a) All LPFM stations will be licensed for unlimited time operation, except those stations operating under a time sharing agreement pursuant to Section 73.872 of this subpart.

(b) All LPFM stations are required to operate at least 36 hours per week, consisting of at least 5 hours of operation per day on at least 6 days of the week; however, stations licensed to educational institutions are not required to operate on Saturday or Sunday or to observe the minimum operating requirements during those days designated on the official school calendar as vacation or recess periods.

20. A new Section 73.853 is added, as follows:

§73.853 Licensing requirements and service.

(a) An LPFM station may be licensed only to:

- (i) nonprofit educational organizations and upon a showing that the proposed station will be used for the advancement of an educational program; and
- (ii) state and local governments and non-government entities that will provide noncommercial public safety radio services.

(b) Only local applicants will be permitted to submit applications for a period of two years from the date that LP100 and LP10 stations, respectively, are first made available for application. For the purposes of this subsection, an applicant will be deemed local if it can certify that:

- (i) the applicant, its local chapter or branch is physically headquartered or has a campus within 16.1 km (10 miles) of the proposed site for the transmitting antenna;
- (ii) it has 75% of its board members residing within 16.1 km (10 miles) of the proposed site for the transmitting antenna; or
- (iii) in the case of any applicant proposing a public safety radio service, the applicant has jurisdiction within the service area of the proposed LPFM station.

21. A new Section 73.854 is added, as follows:

§ 73.854 Unlicensed operations.

No application for an LPFM station may be granted unless the applicant certifies, under penalty of perjury, to one of the following statements:

- (a) Neither the applicant, nor any party to the application, has engaged in any manner including individually or with persons, groups, organizations or other entities, in the unlicensed operation

of any station in violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301.

(b) To the extent the applicant or any party to the application has engaged in any manner, individually or with other persons, groups, organizations or other entities, in the unlicensed operation of a station in violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301, such an engagement:

(1) ceased voluntarily no later than February 26, 1999, without direction from the FCC to do so; or

(2) ceased operation within 24 hours of being directed by the FCC to terminate unlicensed operation of any station.

22. A new Section 73.855 is added, as follows:

§73.855 Ownership limits.

(a) No authorization for an LPFM station shall be granted to any party if the grant of that authorization will result in any such party holding an attributable interest in two LPFM stations separated by less than 12 km (7 miles).

(b) Nationwide ownership limits will be phased in according to the following schedule:

(1) For a period of two years from the date that the LPFM stations are first made available for application, a party may hold an attributable interest in no more than one LPFM station.

(2) For the period between two and three years from the date that the initial filing window opens for LPFM applications, a party may hold an attributable interest in no more than five LPFM stations.

(3) After three years from the date that the initial filing window opens for LPFM stations, a party may hold an attributable interest in no more than ten stations.

23. A new Section 73.858 is added, as follows:

§73.858 Attribution of LPFM station interests.

Ownership and other interests in LPFM station permittees and licensees will be attributed to their holders and deemed cognizable for the purposes of §§ 73.855 and 73.860 of this Subpart, in accordance with the provisions of §73.3555, subject to the following exceptions:

(a) A director of an entity that holds an LPFM license will not have such interest treated as attributable if such director also holds an attributable interest in a broadcast licensee or other media entity but recuses himself or herself from any matters affecting the LPFM station.

(b) A local chapter of a national or other large organization shall not have the attributable interests of the national organization attributed to it provided that the local chapter maintains a local business office and has a distinct local presence and mission.

(c) A parent or subsidiary of a LPFM licensee or permittee that is a non-stock corporation will be treated as having an attributable interest in such corporation. The officers, directors, and members of a non-stock corporation's governing body and of any parent or subsidiary entity will have such positional interests attributed to them.

24. A new Section 73.860 is added, as follows:

§73.860 Cross-ownership.

(a) No license for an LPFM station shall be granted to any party if the grant of such authorization will result in the same party holding an attributable interest in any other non-LPFM broadcast station, including any FM translator or low power television station, or any other media subject to broadcast ownership restrictions.

(b) A party with an attributable interest in a broadcast radio station must divest such interest prior to the commencement of operations of an LPFM station in which the party also holds an interest.

(c) No LPFM licensee may enter into an operating agreement of any type, including a time brokerage or management agreement, with either a full power broadcast station or another LPFM station.

25. A new Section 73.865 is added, as follows:

§73.865 Assignment and transfer of LPFM authorizations.

(a) An LPFM authorization may not be transferred or assigned except for a transfer or assignment that involves:

- (1) less than a substantial change in ownership and control; or
- (2) an involuntary assignment of license or transfer of control.

(b) A change in the name of an LPFM licensee where no change in ownership or control is involved may be accomplished by written notification by the licensee to the Commission

26. A new Section 73.870 is added, as follows:

§73.870 Processing of LPFM Broadcast Station applications.

(a) A minor change for an LP100 station authorized under this Subpart is limited to transmitter relocations of less than two kilometers. A minor change for an LP10 station authorized under this Subpart cannot be limited to transmitter site relocations of less than one kilometer. Minor changes of LPFM stations may include changes in frequency to adjacent or IF frequencies, or, upon a technical showing of reduced interference, to any frequency.

(b) The Commission will specify by Public Notice a window filing period for applications for new LPFM stations and major modifications in the facilities of authorized LPFM stations. LPFM applications for new facilities and for major modifications in authorized LPFM stations will be accepted only during the appropriate window. Applications submitted prior to the window opening date identified in the Public Notice will be returned as premature. Applications submitted after the deadline will be dismissed with prejudice as untimely.

(c) Applications subject to subsection (b) that fail to meet the Section 73.807 minimum distance separations, other than to LPFM station facilities proposed in applications filed in the same window, will be dismissed without any opportunity to amend such applications.

(d) Following the close of the window, the Commission will issue a Public Notice of acceptance for filing of applications submitted pursuant to subsection (b) that meet technical and legal requirements and that are not in conflict with any other application filed during the window. Following the close of the window, the Commission also will issue a Public Notice of the acceptance for filing of all applications tentatively selected pursuant to the procedures for mutually exclusive LPFM applications set forth at Section 73.872. Petitions to deny such applications may be filed within 30 days of such public notice and in accordance with the procedures set forth at Section 73.3584 of this Part. A copy of any petition to deny must be served on the applicant.

(e) Minor change LPFM applications may be filed at any time, unless restricted by the staff, and generally, will be processed in the order in which they are tendered. Such applications must meet all technical and legal requirements applicable to new LPFM station applications.

27. A new section 73.872 is added, as follows:

§ 73.872 Selection procedure for mutually exclusive LPFM applications.

- (a) Following the close of each window for new LPFM stations and for modifications in the facilities of authorized LPFM stations, the Commission will issue a public notice identifying all groups of mutually exclusive applications. Such applications will be awarded points to determine the tentative selectee. Unless resolved by settlement pursuant to subsection (e), the tentative selectee will be the applicant within each group with the highest point total under the procedure set forth in this section, except as provided in paragraphs (c) and (d).
- (b) Each mutually exclusive application will be awarded one point for each of the following criteria, based on application certification that the qualifying conditions are met:
 - (1) Established community presence. An applicant must, for a period of at least two years prior to application, have been physically headquartered, have had a campus, or have had seventy-five percent of its board members residing within 10 miles of the coordinates of the proposed transmitting antenna. Applicants claiming a point for this criterion must submit the documentation set forth in the application form at the time of filing their applications.
 - (2) Proposed operating hours. The applicant must pledge to operate at least 12 hours per day.
 - (3) Local program origination. The applicant must pledge to originate locally at least eight hours of programming per day. For purposes of this criterion, local origination is the production of programming within 10 miles of the coordinates of the proposed transmitting antenna.
- (c) *Voluntary Time-Sharing*. If mutually exclusive applications have the same point total, any two or more of the tied applicants may propose to share use of the frequency by submitting, within 30 days of the release of a public notice announcing the tie, a time-share proposal. Such proposals shall be

treated as amendments to the time-share proponents' applications, and shall become part of the terms of the station license. Where such proposals include all of the tied applications, all of the tied applications will be treated as tentative selectees; otherwise, time-share proponents' points will be aggregated to determine the tentative selectees.

- (1) Time-share proposals shall be in writing and signed by each time-share proponent, and shall satisfy the following requirements: (i) the proposal must specify the proposed hours of operation of each time-share proponent; (ii) the proposal must not include simultaneous operation of the time-share proponents; and (iii) each time-share proponent must propose to operate for at least 10 hours per week.
 - (2) Where a station is licensed pursuant to a time-sharing proposal, a change of the regular schedule set forth therein will be permitted only where an written agreement signed by each time-sharing licensee and complying with requirements (i) through (iii) above is filed with the Commission, Attention: Audio Services Division, Mass Media Bureau, prior to the date of the change.
- (d) *Successive License Terms.*

(1) If a tie among mutually exclusive applications is not resolved through time-sharing in accordance with paragraph (c) of this section, the tied applications will be reviewed for acceptability and applicants with tied, grantable applications will be eligible for equal, successive, non-renewable license terms of no less than one year each for a total combined term of eight years, in accordance with Section 73.873. Eligible applications will be granted simultaneously, and the sequence of the applicants' license terms will be determined by the sequence in which they file applications for licenses to cover their construction permits based on the day of filing, except that eligible applicants proposing same-site facilities will be required, within 30 days of written notification by the Commission staff, to submit a written settlement agreement as to construction and license term sequence. Failure to submit such an agreement will result in the dismissal of the applications proposing same-site facilities and the grant of the remaining, eligible applications.

(2) Groups of more than eight tied, grantable applications will not be eligible for successive license terms under this section. Where such groups exist, the staff will dismiss all but the applications of the eight entities with the longest established community presences, as provided in paragraph (b)(1) of this section. If more than eight tied, grantable applications remain, the applicants must submit, within 30 days of written notification by the Commission staff, a written settlement agreement limiting the group to eight. Failure to do so will result in dismissal of the entire application group.

(e) Mutually exclusive applicants may propose a settlement at any time during the selection process after the release of a public notice announcing the mutually exclusive groups. Settlement proposals must include all of the applicants in a group and must comply with the Commission's rules and policies regarding settlements, including the requirements of Sections 73.3525, 73.3588, and 73.3589 of this Part. Settlement proposals may include time-share agreements that comply with the requirements of subsection(c), provided that such agreements may not be filed for the purpose of point aggregation outside of the thirty-day period set forth in subsection (c).

28. A new Section 73.873 is added, as follows:

§73.873 LPFM license period.

(a) Initial licenses for LPFM stations not subject to successive license terms will be issued for a period running until the date specified in §73.1020 for full service stations operating in the LPFM station's state or territory, or if issued after such date, determined in accordance with §73.1020.

(b) The station license period issued under the successive license term tiebreaker procedures will be determined pursuant to Section 73.872(d) of this Subpart and shall be for the period specified in the station license.

(c) The license of an LPFM station that fails to transmit broadcast signals for any consecutive 12-month period expires as a matter of law at the end of that period, notwithstanding any provision, term, or condition of the license to the contrary.

29. A new Section 73.875 is added, as follows

§ 73.875 Modification of transmission systems.

The following procedures and restrictions apply to licensee modifications of authorized broadcast transmission system facilities.

(a) The following changes are prohibited:

(1) Those that would result in the emission of signals outside of the authorized channel exceeding limits prescribed for the class of service.

(2) Those that would cause the transmission system to exceed the equipment performance measurements prescribed in Section 73.508 of this Part.

(b) The following changes may be made only after the grant of a construction permit application on FCC Form 318.

(1) Any construction of a new tower structure for broadcast purposes, except for replacement of an existing tower with a new tower of identical height and geographic coordinates.

(2) Any change in station geographic coordinates, including coordinate corrections and any move of the antenna to another tower structure located at the same coordinates.

(3) Any change in antenna height more than 2 meters above or 4 meters below the authorized value.

(4) Any change in channel.

(c) The following LPFM modifications may be made without prior authorization from the Commission. A modification of license application (FCC Form 319) must be submitted to the Commission within 10 days of commencing program test operations pursuant to § 73.1620. For applications filed pursuant to subsection (c)(1), the modification of license application must contain an exhibit demonstrating compliance with the Commission's radiofrequency radiation guidelines. In addition, applications solely filed pursuant to subsections (c)(1) or (c)(2), where the installation is located within 3.2 km of an AM tower or is located on an AM tower, an exhibit demonstrating compliance with § 73.1692 is also required.

(1) Replacement of an antenna with one of the same or different number of antenna bays, provided

that the height of the antenna radiation center is not more than 2 meters above or 4 meters below the authorized values. Program test operations at the full authorized ERP may commence immediately upon installation pursuant to § 73.1620(a)(1).

(2) Replacement of a transmission line with one of a different type or length which changes the transmitter operating power (TPO) from the authorized value, but not the ERP, must be reported in a license modification application to the Commission.

(3) Changes in the hours of operation of stations authorized pursuant to time-share agreements in accordance with Section 73.872 of this Part.

30. A new Section 73.877 is added, as follows:

§73.877 Station logs for LPFM stations.

(a) The licensee of each LPFM station must maintain a station log. Each log entry must include the time and date of observation and the name of the person making the entry. The following information must be entered in the station log:

(1) Any extinguishment or malfunction of the antenna structure obstruction lighting, adjustments, repairs, or replacement to the lighting system, or related notification to the FAA.

See Sections 17.48 and 73.49 of this Part.

(2) Brief explanation of station outages due to equipment malfunction, servicing, or replacement;

(3) Operations not in accordance with the station license; and

(4) EAS weekly log requirements set forth in Section 11.61(a)(1)(v) of this Chapter.

31. A new Section 73.878 is added, as follows:

§ 73.878 Station inspections by FCC; availability to FCC of station logs and records.

(a) The licensee of a broadcast station shall make the station available for inspection by representatives of the FCC during the station's business hours, and at any time it is in operation. In the course of an inspection or investigation, an FCC representative may require special equipment or program tests.

(b) Station records and logs shall be made available for inspection or duplication at the request of the FCC or its representatives. Such logs or records may be removed from the licensee's possession by an FCC representative or, upon request, shall be mailed by the licensee to the FCC by either registered mail, return receipt requested, or certified mail, return receipt requested. The return receipt shall be retained by the licensee as part of the station records until such records or logs are returned to the licensee. A receipt shall be furnished when the logs or records are removed from the licensee's possession by an FCC representative and this receipt shall be retained by the licensee as part of the station records until such records or logs are returned to the licensee. When the FCC has no further need for such records or logs, they shall be returned to the licensee. The

provisions of this rule shall apply solely to those station logs and records that are required to be maintained by the provisions of this part.

- (1) Where records or logs are maintained as the official records of a recognized law enforcement agency and the removal of the records from the possession of the law enforcement agency will hinder its law enforcement activities, such records will not be removed pursuant to this section if the chief of the law enforcement agency promptly certifies in writing to the FCC that removal of the logs or records will hinder law enforcement activities of the agency, stating insofar as feasible the basis for his decision and the date when it can reasonably be expected that such records will be released to the FCC.

32. A new Section 73.879 is added, as follows:

§ 73.879 Signal retransmission.

An LPFM licensee may not retransmit, either terrestrially or via satellite, the signal of a full-power radio broadcast station.

33. A new Section 73.881 is added, as follows:

§73.881 Equal employment opportunities.

General EEO policy. Equal employment opportunity shall be afforded by all LPFM licensees and permittees to all qualified persons, and no person shall be discriminated against because of race, color, religion, national origin, or sex.

34. Section 73.1001 in Subpart H is modified as follows:

§73.1001 Scope.

(a) * * *

(b) Rules in part 73 applying exclusively to a particular broadcast service are contained in the following: AM, subpart A; FM, subpart B; Noncommercial Educational FM, subpart C; TV, subpart E; and LPFM, subpart G.

(c) Certain provisions of this subpart apply to International Broadcast Stations (subpart F, part 73), LPFM (subpart G, part 73), and Low Power TV, TV Translator and TV Booster Stations (subpart G, part 74) where the rules for those services so provide.

(d) * * *

35. Section 73.1620 is modified as follows:

§73.1620 Program tests.

(a) Upon the completion of construction of an AM, FM, LPFM, or TV station in accordance with the terms of the construction permit, the technical provisions of the application, the rules and

regulations and the applicable engineering standards, program tests may be conducted in accordance with the following:

(1) * * *

(5) Except for permits subject to successive license terms, the permittee of an LPFM station may begin program tests upon notification to the FCC in Washington, D.C. provided that within 10 days thereafter, an application for license is filed. Program tests may be conducted by a licensee subject to mandatory license terms only during the term specified on such licensee's authorization.

* * * * *

36. Section 73.1660 is modified as follows:

§73.1660 Acceptability of broadcast transmitters.

(a) An AM, FM, LPFM, or TV transmitter shall be verified for compliance with the requirements of this part following the procedures described in Part 2 of the FCC rules.

(b) * * * * *

37. Section 73.3533 is modified as follows:

§ 73.3533 Application for construction permit or modification of construction permit.

* * * * *

(a)(8) FCC Form 318, "Application for Construction Permit for a Low Power FM Broadcast Station."

* * * * *

38. Section 73.3536 is modified as follows:

§ 73.3536 Application for license to cover construction permit.

* * * * *

(b)(6) FCC Form 319, "Application for a Low Power FM Broadcast Station License."

* * * * *

39. Section 73.3550 is modified as follows:

* * * * *

(f) Only four-letter call signs (plus LP, FM, or TV, if used) will be assigned. The four letter call

sign for LPFM stations will be followed by the suffix “-LP”. However, subject to the provisions of this section, a call sign of a station may be conformed to a commonly-owned station holding a three-letter call sign (plus FM, TV, or LP suffixes, if used).

* * * * *

40. Section 73.3598 is modified as follows:

§73.3598 Period of construction.

* * * * *

(a) Each original construction permit for the construction of a new TV, AM, FM or International Broadcast; low power TV; TV translator; TV booster; FM translator; FM booster; or broadcast auxiliary station, or to make changes in such existing stations, shall specify a period of three years from the date of issuance of the original construction permit within which construction shall be completed and application for license filed. Each original construction permit for the construction of a new LPFM station shall specify a period of eighteen months from the date of issuance of the construction permit within which construction shall be completed and application for license filed

41. The informational Section 73.3617 is modified to eliminate the reference to the Enforcement Division:

§73.3617 Broadcast information available on the Internet.

The Mass Media Bureau and each of its Divisions provide information on the Internet regarding broadcast rules and policies, pending and completed rulemakings, and pending applications. These sites also include copies of public notices and texts of recent decisions. The Mass Media Bureau’s address is <http://www.fcc.gov/mmb/>; the Audio Services Division address is <http://www.fcc.gov/mmb/asd/>; the Video Services Division is located at <http://www.fcc.gov/mmb/vsd/>; and the Policy and Rules Division’s address is <http://www.fcc.gov/mmb/prd/>.

Part 74 of Title 47 of the U.S. Code of Federal Regulations is amended to read as follows:

PART 74 – EXPERIMENTAL RADIO, AUXILIARY, SPECIAL BROADCAST AND OTHER PROGRAM DISTRIBUTIONAL SERVICES

1. The authority citation for Part 74 continues to read as follows:

Authority: 47 U.S.C. 154, 303, 334, 336

2. Section 74.432, Subpart D in Part 74 is modified, as follows:

§ 74.432 Licensing requirements and procedures.

(a) A license for a remote pickup station will be issued to: the licensee of an AM, FM, noncommercial FM, low power FM, TV, international broadcast or low power TV station; broadcast network-entity; or cable network-entity.

* * * * *

3. Section 73.532, Subpart E in Part 74, is modified, as follows:

§ 74.532 Licensing requirements.

(a) An aural broadcast STL or an aural broadcast intercity relay station will be licensed only to the licensee or licensees of broadcast stations, including low power FM stations, other than international broadcast stations, and for use with broadcast stations owned entirely by or under common control of the licensee or licensees. An aural broadcast intercity relay station also will be licensed for use by low power FM stations, noncommercial educational FM translator stations assigned to reserved channels (Channels 201-220) and owned and operated by their primary station, by FM translator stations operating within the coverage contour of their primary stations, and by FM booster stations. Aural auxiliary stations licensed to low power FM stations will be assigned on a secondary basis; i.e., subject to the condition that no harmful interference is caused to other aural auxiliary stations assigned to radio broadcast stations. Auxiliary stations licensed to low power FM stations must accept any interference caused by stations having primary use of aural auxiliary frequencies.

4. Section 74.1204 Subpart L in Part 74, is renamed and amended as follows:

§74.1204 Protection of FM broadcast, FM Translator and LP100 stations.

(a) An application for an FM translator station will not be accepted for filing if the proposed operation would involve overlap of predicted field contours with any other authorized commercial or noncommercial educational FM broadcast stations, FM translators, and Class D (secondary) noncommercial educational FM stations; or if it would result in new or increased overlap with an LP100 station, as set forth below:

(1) * * *

(2) * * *

(3) * * *

(4) LP100 stations (Protected Contour: 1 mV/m)

Frequency separation	Interference contour of proposed translator station	Protected contour of LP100 LPFM station
Cochannel 200 kHz	0.1 mV/m (40 dBu) 0.5 mV/m (54 dBu)	1 mV/m (60 dBu) 1 mV/m (60 dBu)

* * * * *

APPENDIX C

FINAL REGULATORY FLEXIBILITY ACT ANALYSIS

As required by the Regulatory Flexibility Act (RFA),² an Initial Regulatory Flexibility Analysis (IRFA) was incorporated in the *Notice of Proposed Rulemaking (Notice)*.³ The Commission sought written public comment on the proposals in the *Notice*, including comment on the IRFA. No comments were received in response to the IRFA. This present Final Regulatory Flexibility Analysis (FRFA) conforms to the RFA.⁴

Need for and Objectives of the *Report and Order*

The Commission received petitions for rulemaking asking for the creation of a low power radio service. Because they raised similar or identical issues, the Commission coordinated its responses to them. The Commission released public notices of its receipt of three of the proposals and invited public comment on them. In response to significant public support, the Commission released the *Notice* to propose a new, low power FM service.

In the *Report and Order*, the Commission is adopting a 100-watt class (LP100) and a 10-watt class (LP10). Because of the predicted lower construction and operational costs of LPFM stations as opposed to full power facilities, we expect that small entities would be expected to have few economic obstacles to becoming LPFM licensees. Therefore, this new service may serve as a vehicle for small entities and under-represented groups (including women and minorities) to gain valuable broadcast experience and to add their voices to their local communities.

Summary of Significant Issues Raised by Public Comments in Response to the IRFA

No comments were received in response to the IRFA.

Description and Estimate of the Number of Small Entities to Which Rules Will Apply

The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that will be affected by the rules.⁵ The RFA generally defines the term "small entity" as having the same meaning as the terms "small business," "small organization," and "small governmental jurisdiction."⁶ In addition, the term "small business" has the same meaning as the term "small business

² See 5 U.S.C. § 603. The RFA, *see* 5 U.S.C. § 601 *et seq.*, has been amended by the Contract With America Advancement Act of 1996, Pub. L. No. 104-121, 110 Stat. 847 (1996) (CWAAA). Title II of the CWAAA is the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA).

³ Creation of a Low Power Radio Service, MM Docket No. 99-25, *Notice of Proposed Rulemaking*, 14 FCC Rcd 2471, 2530-2534 (1999) (*Notice*).

⁴ See 5 U.S.C. § 604.

⁵ 5 U.S.C. § 603(b)(3).

⁶ 5 U.S.C. § 601(6).

concern" under the Small Business Act.⁷ A small business concern is one which: (1) is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA).⁸ A small organization is generally "any not-for-profit enterprise which is independently owned and operated and is not dominant in its field."⁹ Nationwide, as of 1992, there were approximately 275,801 small organizations.¹⁰ "Small governmental jurisdiction" generally means "governments of cities, counties, towns, townships, villages, school districts, or special districts, with a population of less than 50,000."¹¹ The Census Bureau estimates that this ratio is approximately accurate for all governmental entities. Thus, of the 85,006 governmental entities, we estimate that 81,600 (91 per cent) are small entities.

The Small Business Administration defines a radio broadcasting station that has \$5 million or less in annual receipts as a small business.¹² A radio broadcasting station is an establishment primarily engaged in broadcasting aural programs by radio to the public.¹³ Included in this industry are commercial, religious, educational, and other radio stations.¹⁴ The 1992 Census indicates that 96 percent (5,861 of 6,127) radio station establishments produced less than \$5 million in revenue in 1992. Official Commission records indicate that 11,334 individual radio stations were operating in 1992.¹⁵ As of December 31, 1998, Commission records indicate that 12,615 radio stations were operating, of which 7,832 were FM stations.¹⁶

The rules will apply to a new category of FM radio broadcasting service. It is not known how many entities may seek to obtain a low power radio license. Nor do we know how many of these entities will be small entities. We note, however, that in the year since we issued the *Notice*, the Commission's LPFM website has received approximately 100,000 hits, demonstrating the interest of individuals and groups in

⁷ 5 U.S.C. § 601(3) (incorporating by reference the definition of "small business concern" in 15 U.S.C. § 632). Pursuant to the RFA, the statutory definition of a small business applies "unless an agency, after consultation with the Office of Advocacy of the Small Business Administration and after opportunity for public comment, establishes one or more definitions of such term which are appropriate to the activities of the agency and publishes such definition(s) in the Federal Register." 5 U.S.C. § 601(3).

⁸ Small Business Act, 15 U.S.C. § 632 (1996).

⁹ 5 U.S.C. § 601(4).

¹⁰ 1992 Economic Census, U.S. Bureau of the Census, Table 6 (special tabulation of data under contract to Office of Advocacy of the U.S. Small Business Administration).

¹⁶ FCC News Release, "Broadcast Station Totals as of September 30, 1999" (Nov. 22, 1999).

operating such a facility. In addition, we expect that, due to the small size of low power FM stations, small entities would generally have a greater interest than large ones in acquiring them.

Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements

The Commission is creating a new broadcasting service that may allow hundreds or thousands of small entities to become broadcast licensees for the first time. This endeavor will require the collection of information for the purposes of processing applications for (among other things) initial construction permits, assignments and transfers, and renewals. We will also require lower power radio stations to comply with some of the reporting, recordkeeping, and other compliance requirements as full power radio broadcasters.

Steps Taken to Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered

The RFA requires agencies to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives: (1) the establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance rather than design standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.¹⁷

The LP100 and LP10 services are likely create significant opportunities for new small businesses. In addition, the Commission has taken steps to minimize the impact on existing small broadcasters.

Creating New Opportunities for Small Businesses. The *Report and Order* adopts a number of rules designed to help small businesses obtain and retain LP100 and LP10 licenses. These include ownership rules, and exemptions from mandatory electronic filing and main studio requirements.

The *Report and Order* adopts ownership rules to assist small entities to acquire or construct LPFM stations. Parties with attributable interests in any full power broadcast facilities are not eligible to have any ownership interest in any low power radio stations; this prevents large group owners (or even large single-station owners) from constructing and operating LPFM facilities that might otherwise be available to small entities.¹⁸ The local and national ownership restrictions of one station per community and, initially, one station, and ultimately, 10 stations, nationwide are intended to ensure that ample LPFM stations are available for small entities.¹⁹ However, the ownership rules also prohibit small entity full power broadcasters from acquiring LPFM licenses.

The *Report and Order* also modifies the application of some of our programming and service requirements for LPFM stations. LPFM stations are not required to maintain a public file, although they must maintain a political file.²⁰ They also need not create quarterly issues and programming lists or

¹⁷ 5 U.S.C. § 603(c)(1)-(4).

¹⁸ See *Report and Order* at Part II.D.1.

¹⁹ See *Report and Order* at Parts II.D.3, II.D.4.

²⁰ See *Report and Order* at Part II.G.3, II.G.6.

maintain a main studio.²¹ In addition, while full power and LPFM stations both must participate in the Emergency Alert System (EAS) and have decoding equipment, LPFM stations need not purchase encoding equipment.²² In addition, LPFM licensees need not comply with any EEO program requirements we adopt in our pending rulemaking proceeding. These exemptions from and modifications of the application of the Commission's programming and service requirements to LPFM stations will reduce administrative burdens and costs for small business licensees.

The *Report and Order* also adopts filing requirements that should help small businesses. Although the *Notice* proposed to mandate electronic filing for LPFM stations, the *Report and Order* declined to do so for the first round of LP100 applications.²³ The Commission made this decision because it recognized that there might be a disparity between applicants for LP100 licenses in terms of computer resources and skills. This result should help small businesses without more advanced technological resources to participate in the LP100 application process. The *Report and Order* adopts a window filing process, as opposed to a first-come, first-served process; some commenters claimed that the latter process would favor applicants with superior financial and technical resources.²⁴

Minimizing Impact on Existing Small Business Broadcast Stations. The *Report and Order* has also adopted an alternative that will minimize the impact on existing small business broadcast stations. LP100 and LP10 stations will be noncommercial, educational stations, and so will not compete with small business commercial broadcasters for advertising revenue.

Report to Congress

The Commission will send a copy of the *Report and Order*, including this FRFA, in a report to be sent to Congress pursuant to the Small Business Regulatory Enforcement Fairness Act of 1996, *see* 5 U.S.C. § 801(a)(1)(A). In addition, the Commission will send a copy of the *Report and Order*, including the FRFA, to the Chief Counsel for Advocacy of the Small Business Administration. A copy of the *Report and Order* and FRFA (or summaries thereof) will also be published in the Federal Register. *See* 5 U.S.C. § 604(b).

²¹ *See id.*

²² *See Report and Order* at Part II.G.8.

²³ *See Report and Order* at Part II.F.1.

²⁴ *See Report and Order* at Part II.F.2.

SEPARATE STATEMENT OF CHAIRMAN WILLIAM E. KENNARD

Re: Creation of a Low Power Radio Service (MM 99-25)

When I first became Chairman of the FCC, I started talking to people about radio. And I encountered a lot of frustration on the part of folks who felt like they had ideas on how to put radio to good use serving their communities, but no way of putting those ideas into action.

I heard this from churches and schools, community groups and public safety officials, civic organizations, and non-English speaking communities, from the Haitians in South Florida to the Vietnamese of South Texas.

In meeting with these groups, I've been struck by all of the different ways they propose to use the airwaves. Some want low power FM to serve as a forum for discussions of issues relevant to local communities. Some want to provide job training for young people seeking to make a career in broadcasting. Some want to emphasize cultural learning, while others want to offer more formal instruction and training over the air. And some want to keep their communities informed of public safety concerns, including weather and traffic conditions.

I have also been struck by the enthusiasm that these groups have when simply discussing the possibility of a low power service. Every day, it seems, we read about a bigger merger and more consolidation, all of which leads to the perception that the interests of small groups and individuals are being lost, and that important voices and viewpoints are being shut out.

The possibility of opening up available spectrum in the FM band has sparked creativity. Among those who propose new uses for the FM spectrum, the excitement is palpable.

And the fact is, there is more room at the table; there is spectrum available for these and other uses. But rather than being able to use the available spectrum to test their ideas in the marketplace, these groups are being shut out, prohibited from serving their communities.

Today we recognize the important role of more modest technical facilities, and throw open the doors of opportunity to the smaller, community-oriented broadcaster.

Now there are those that argue that there is no viable business case for low power FM, that the economics just don't work, and that the FCC should save low power broadcasters from themselves. I am not convinced of this because it is not the business of the FCC to pick winners and losers. We should empower consumers to decide what he or she prefers, rather than ruling out some options on our own and depriving the listener of making that choice for him- or herself.

That's what faith in the marketplace is all about. Remember, there was a time in this country when AM broadcasters said that FM would never make it.

Some argue that the creation of a new FM service means there will be more licensees subject to our broadcasting rules, making enforcement of our rules more difficult and more expensive. I am skeptical when concerns like administrative expense and convenience are invoked to justify the exclusion of new competitors in the market. That's like saying we won't issue any more drivers' licenses because there are already too many speeders. That would penalize those who have not broken the law, but do nothing to crack down on those who have.

The most serious objection to low power FM, and one that I have studied extensively, is the claim that low power FM would cause interference to existing radio stations. I have pledged all along that I would not support any proposal that threatens the integrity of existing radio services. I am pleased to say that my support of today's proposal is consistent with that pledge.

Protecting the current FM radio service is an obligation that cannot be compromised. In a relatively short period of time, the FM band has been transformed from a virtual desert into a vibrant and critical source of news, information, and entertainment in the daily lives of millions of Americans. It needs and deserves our protection.

That is why we have invested so many resources in conducting and analyzing technical studies on the issue of low power FM. I suspect that low power FM has been subjected to as much testing and engineering as any radio service we have ever looked at. And we have learned quite a lot.

The threat of interference has persuaded us to back away from some elements of the original low power proposal. For instance, we are limiting low power FM to 100 and 10 watt stations, even though we initially raised the possibility of 1,000 watt stations as well. Likewise, while we considered eliminating both second and third adjacent channel protections, we will be eliminating only the latter, while retaining the former.

While some studies suggest the possibility of interference even with the limitations we have adopted, the flaws underling these studies seem plain. Some of the studies cited in opposition to a low power FM service start with the premise that most existing FM radios do not provide adequate reception even today, before the creation of a low power service. These commenters suggest that we adopt standards that bear no relation to the choices that consumers have repeatedly made in the market, and that we reject reception standards that the over one-half billion radios now in use implicitly endorse. I see no reason for the FCC to invent standards on its own, when consumers have already voted with their dollars to decide on an adequate level of performance.

Our fundamental obligation under the law, as codified in section 1 of the Communications Act, is to "make available . . . a rapid, efficient, Nation-wide and worldwide wire and radio and communication service." At the heart of this mandate is the notion of opening up new opportunities in a way that protects the integrity of existing services. Today's order does exactly that and I am proud to support it.

SEPARATE STATEMENT OF COMMISSIONER SUSAN NESS

RE: IN THE MATTER OF CREATION OF A LOW POWER RADIO SERVICE (MM DOCKET NO. 99-25)

Today we establish a new, unmistakably local radio service on the FM band, carefully crafted to ensure that community-based voices are heard, while maintaining the technical integrity of the full powered service. In so doing, we have enabled students, community organizations, churches, and those underrepresented in conventional broadcasting to provide programming of special interest to community and niche populations. I support this decision, but write separately to address the issues that I raised in my statement accompanying the Notice of Proposed Rulemaking last year regarding both the special nature of the service and the potential for interference with full power stations.

Community Based Service

The new low-powered service responds to the needs expressed by thousands of individuals and community-based groups who envision a vehicle to provide a very localized service, including high sports and debates, local campaign coverage, and other local public service needs. In no way is this service a miniaturized replica of a full powered station. Rather, it was structured to ensure that the service maintains its unique character. It is a non-commercial educational service. Licenses are non-transferable. A station's power cannot exceed 100 watts, establishing a coverage area approximately 3.5 miles around the transmitter. Local ownership is required for the first two years and during that time, licensees cannot own any other low powered FM station. After two years, they are subject to a low national cap, thus assuring a wide dissemination of ownership. Where there are mutually exclusive applications, priority will be given to those with an established community presence who pledge to provide more local programming over a longer broadcast day. I believe that these requirements and restrictions will preserve the special characteristics of this broadcast service.

Technical Interference

One of the most important functions of the Federal Communications Commission is our stewardship of the electromagnetic spectrum. In establishing the FCC, Congress charged this agency with avoiding chaos on the airwaves. Thus, I take very seriously our responsibility not to permit degradation of the FM band.

Moreover, I have long held the view that full powered radio broadcasters should be afforded the opportunity to transition into the digital world. Thus, I insisted that proponents of in-band-on-channel ("IBOC") digital radio broadcast systems have a meaningful opportunity to comment on the impact of low-power stations on such digital services *before* the record closed in this proceeding.

After an exhaustive review of the technical documentation in this record -- including the filings of those promoting digital IBOC radio systems -- I believe that the technical limitations we have imposed are adequate to protect existing full powered stations from undue interference from low-powered stations. In addition, the record suggests that elimination of third adjacent channel protection does not hamper the deployment of currently proposed IBOC digital radio systems.

The item puts to rest the possibility that we would entertain further reductions in protection through elimination of the second adjacent channel restriction. I feared that the mere mention of the possibility of future action could chill financial investment in the full-powered radio service. This would have a devastating impact --not on the major groups -- but rather, on the small and medium market independent stations which struggle daily to serve their communities. Many of these independent station and small group owners are women and minorities -- the very groups that are under-represented in the full power broadcast service.

Finally, the Bureau has assured me that the 20 km buffer zone is sufficient to ensure retention of audience reach if an FM station is forced to move from its existing tower to another tower, as is often the case when digital television stations commence service.

Conclusion

The new low power FM service was carefully designed to emphasize its unique community benefits, while minimizing the possibility of undue interference with the existing full power FM service. I will be watching carefully whether our hopes and expectations are met as this service is deployed.

In the Matter of Creation of Low Power Radio Service, MM Docket No. 99-25
Report & Order
Dissenting Statement of Commissioner Harold W. Furchtgott-Roth

I am relieved that the Commission has not demolished first- and second-adjacent channel protections in this Report & Order. But I can not support, for the reasons set forth below, even the elimination of third-adjacent channel protections. Accordingly, I dissent from these new rules establishing “low power” radio licenses.

I originally dissented from the Notice of Proposed Rulemaking in this proceeding. *See* Notice of Proposed Rulemaking, Creation of a Low Power Radio Service, MM Docket No. 99-25 (Jan. 28, 1999). I did so because the Notice did not simply propose the creation of a new service within existing interference protection standards but went far beyond that, suggesting the elimination of third-,second- and even first-adjacent channel protections. As I explained, such action harms existing license holders and their listeners, while producing very little in the way of countervailing benefits. *See generally* Dissenting Statement of Commissioner Harold W. Furchtgott-Roth, *Notice of Proposed Rulemaking, Creation of a Low Power Radio Service*, 14 FCC Rcd 2471 (1999).

In the intervening twelve months, we have received many comments on this proposal, as well as engineering studies on the level of interference posed by the potential stations. Unfortunately, this entire proceeding has been marked by a rush to judgment. The Commission has simply not taken the time to do the right technical studies, the right way.

Even without studying the engineering studies in the record, we can be sure of one thing. As Commissioner Quello once noted, “it is axiomatic that for each new service introduced, interference to existing service is also introduced.” Dissenting Statement of Commissioner James H. Quello, *Modification of FM Broadcast Station Rules to Increase the Availability of Commercial FM Broadcast Assignments*, 48 FR 29486, 29512 (1983) (BC Docket No. 80-90). This is true even for 100 watt stations dropped by eliminating “only” third adjacent channel protections. There are real costs – to existing stations, their listeners, and to public perception of the quality of FM radio as a media service -- here that the Commission has not even attempted to quantify.

But let’s consider what the Commission today has actually achieved in terms of benefits to place on the other side of the ledger. According to the NPRM in this proceeding, elimination of third adjacent channel protections for 100 watt stations will allow for the creation of *one* such station – in Houston, Texas -- in the top five American cities. *No* such stations will be created in New York, Los Angeles, Chicago, Philadelphia, San Diego, Dallas, San Francisco, Washington, Charlotte, or Miami. So much for the goal of creating low power stations to serve urban communities; there will be precious few new licensees in urban markets.

To the contrary, the bulk of new licensees will be smaller markets. In many of these areas, full power stations likely could already be dropped in *without* changing third-adjacent channel standards at all. (At least, there is no indication of an effort on the part of the Commission even to consider such an alternative approach.) Given that there is little existing demand for additional full-power stations in these

markets, there is no evidence of commercial viability. Indeed, the evidence suggests that such stations are not capable of existence as going concerns.

Perhaps there *is* a demand for lower power noncommercial stations. Theoretically, however, any such actual demand could be met by the dispensation of licenses within our existing rules – *i.e.*, by giving out 101 watt licenses consistent with the 100 watt minimum requirement. *See* 47 C.F.R. section 73.211(a)(3).¹ Yet again, we receive few if any applications for 101 watt licenses, even in the noncommercial arena. Similarly, if somebody really wanted to operate a 50-watt station, they might file a request for waiver of the 100-watt minimum rule. As far as I can tell, though, no such waiver has ever been filed, again suggesting a lack of any real demand for such licenses. In short, there is no evidence in the behavior of license applicants that suggests any pent-up demand for the stations in question.

The Commission has also made clear its intent to create these stations for the use of church groups. *See* Report & Order at para. 5. Since the relevant regulatory classification now is noncommercial educational (“NCE”), the Commission would seem bound to apply its recently adopted “future guidance” on the meaning of “educational” programming to these religious entities.² That guidance would narrow the scope of religious programming that qualifies as educational for purposes of a valid NCE designation. I wonder whether these groups are aware – and how they will feel when they learn – that the broadcast of religious services may not count towards the required amount of educational programming that they must air in order to retain their licenses. *See In re Applications of WQED Pittsburgh and Cornerstone Television, Inc.* MM No. 99-393 (rel. Dec. 29, 1999).³ I also wonder whether they are aware that under that decision they might be required to serve the needs of the “entire” community, rather than their “small, local” group, Report & Order at para. 17. So much for the goal of creating low power stations for use by churches and church groups.

And will the newly recreated Equal Employment Opportunity rules apply to low power stations with 5 or more employees? *See* 47 CFR section 73.2080(a) (applying rules to “*all* licensees or permittees of commercially owned or noncommercially operated AM, FM, TV or

¹ Notably, the rationale for the 100-watt minimum was efficiency in spectrum distribution. It was thought inefficient, unwise, and unmanageable to license radio stations at operating powers any less than this. *See* 33 Fed Reg 7574. Today’s Order never comes to terms with the Commission’s clear statements about the need for the 100-watt floor.

² To be sure, the WQED Order involved television broadcast licenses, as opposed to radio broadcast licenses. But both sorts of licenses are categorized as “noncommercial educational.” I can see no non-arbitrary way to limit the decision on the meaning of the term “educational” to the television context, however. There is nothing about the nature of the media at issue – television versus radio – that could justify the use of two different definitions of the substantive adjective “educational.” Programming does not change its “educational” nature simply because it is received on a radio as opposed to a television.

³ *See also* http://www.fcc.gov/Bureaus/Mass_Media/Orders/1999/fcc99393.txt.

international broadcast stations’) (emphasis added). Presumably they must, just as, for instance, the political programming rules do. The required outreach and paperwork for EEO alone, not to mention all other regulations, may prove overwhelming for the operators of low-power radio stations. If these duties are taken seriously by operators and enforced by the Commission, low power operators will spend more time attempting to figure out what Title 47 of the Code of Federal Regulations requires of them than they will spend broadcasting.

The net result of the foregoing is that there is very little evidence – in the form of applications for, say, 101 watt stations or waivers of the 10-watt minimum – indicative of current market demand for the stations now being created. Layered on top of the apparently low state of demand for these licenses today are the many regulations to which the stations will be subject. Any current demand for 100 and 10 watt stations will only be dampened by these regulatory burdens.

In short, the Commission has, at the expense of existing service quality, created: a handful of new stations in primarily non-urban areas; stations that may not meet their licensing requirements if they air religious programming; stations that may well be unlistenable by fixed listeners due to interference received from higher power stations; a threat to the development of digital radio services; a heavy regulatory scheme, including cross-ownership, political programming rules, and EEO outreach duties, to govern these very small operators; and more enforcement and administration burdens for the Commission. This is not a wise balance of interests. I therefore dissent

**STATEMENT OF COMMISSIONER MICHAEL K. POWELL,
DISSENTING IN PART**

*Re: Report and Order - In the Matter of Creation of Low Power Radio Service
(MM Docket 99-25)*

This item's goal is to create a class of radio stations "designed to serve very localized communities or underrepresented groups within communities." *Notice of Proposed Rulemaking*, MM Docket No. 99-25, 14 FCC Rcd 2471, 2473 (1999). Attempting to give greater voice to narrower interests is generally laudable and I support the objective. But, the question that gives me pause is what the cost is to existing stations that provide equally valuable service to their communities. Because this *Order* fails to give credence to this concern, I respectfully dissent in part.

I do not quibble with the Commission's objectives. Certainly, the extensive consolidation of radio stations into large commercial groups and the financial challenges of operating full power commercial stations have limited the broadcasting opportunities for highly localized interests. The introduction of a low power FM service may partially address this concern. However, to borrow from the teaching of the medical profession, when trying to treat a problem, we should "first do no harm."¹ There presently exist many small and independent stations across the country that are especially notable for their local focus. This admirable group includes a fair number of stations owned by minorities and women, as well as stations with smaller audiences and limited advertising. These stations have struggled to survive as independent voices against the rising tide of consolidation brought on by the economic stress of small scale production. It would be a perverse result, indeed, if these stations were to fail or the quality of locally originated programming suffer, because new LPFM stations diluted their already tenuous base of support.

There are two interrelated, yet distinct, threats to these small stations that stem from the new LPFM service: 1) signal interference and 2) erosion of economic viability. The first has garnered all the attention. The Commission has endeavored to minimize the dangers of interference in this item. It wrongly has ignored the second concern.² I have met with a number of small market broadcasters that tell me that when they raise concerns about the threat of LPFM to their economic viability they are bluntly rebuked—told that such considerations are of no import, that we are only concerned with spectrum efficiency and that we do not pick winners and losers. I, too, heard this line during our internal deliberations. I find the proposition absurd. We regularly consider the economic impacts of our actions on licensees. Just one example is the degree to which we have attempted to balance the need for consolidation

¹ Paraphrasing *Of the Epidemics*. Hippocrates. Translated by Francis Adams (found at <http://classics.mit.edu/Hippocrates/epidemics.1.i.html>).

² See Comments of John Haring and Harry M. Shooshan III "LPFM: The Threat to Consumer Welfare," *In re Creation of a Low Power Radio Service, Notice of Proposed Rulemaking*, MM Dkt No. 99-25 at 24. (Haring & Shooshan) contained in Comments of the National Association of Broadcasters, vol. I ("A station's economic scale of operations is affected both by technical parameters of the broadcast 'machine' it operates and the competitive economic environment in which it operates. The premise of the Commission's LPFM proposal is that the operative constraint on very 'narrowcast' broadcast operations is primarily technical. . . . That is a false premise: In today's operating environment, the constraint on narrowcast programming is primarily economic rather than technical.").

to achieve economic efficiency against our goal to foster myriad diverse voices. Indeed, the Commission itself has recognized that the industry's ability to function in the public interest, convenience and necessity is fundamentally *premised on the industry's economic viability*.³

The introduction of the LPFM service is not simply a way to get greater use out of the spectrum, regardless of who gets the benefits. It is a policy choice to create stations that allow very small communal and parochial interests to find a voice. We are not agnostic as to whether they proliferate and prosper. Indeed, we have made special accommodations to suit our conception of this service, like eliminating the third adjacency protections normally imposed on FM broadcasters. Indeed, for years small broadcasters have tried to expand their services to the community by seeking more lenient interference restrictions, but to no avail. Similarly, we are minting a unique and distinct definition of "community" in order to facilitate the LPFM service. My view is to make such accommodations for this service, while putting our heads in the sand as to the economic impacts on existing stations is in fact, contrary to the assumption of some, picking winners and losers.

The threat to small independent broadcasters by the introduction of LPFM service is not trivial.⁴ While the non-commercial educational LPFM stations will not be direct competitors for advertising dollars to existing commercial stations, they can threaten the economic health of these stations in meaningful ways. LPFM stations might very well siphon financial support away from small market stations. Local support that is presently coming to existing stations in the form of advertising might migrate to one or more LPFM stations in the form of underwriting.⁵ Moreover, the presence of one or more LPFM stations will certainly dilute audience share, on which securing advertising dollars is based. I note, for example, that many of the *Order's* protections exist only within the "protected contour" of the existing FM station. We know, however, that many FM stations reach significant audience share outside that contour and garner significant financial support from these areas.⁶ Finally, market dilution may make it difficult to secure financial support from lenders or investors.

The proponents of LPFM retort that the number of new stations will be few in a given market, and limited in their reach. Perhaps, in some markets this is true. But, the 41 new station possibilities in Elko, Nevada and Springerville, Arizona, or the 25 new station possibilities in Billings, Montana certainly are not trivial to the established stations in those small, rural markets. In all, the Bureau tells us that there is a possibility of around 1000 new LP100 stations (more if LP10 stations come into the market).

It is important to emphasize that an adverse impact on existing stations directly compromises the public interest. Locally originated programming that we favor is expensive to produce compared to the scale efficiencies of syndicated programming. The erosion of economic return, even slight in small markets, may adversely impact the quantity and quality of local programming, which is unlikely to be replaced by micro stations operating under even greater economic constraints. The link between local

⁴ See generally, Haring & Shooshan (an economic analysis documenting the economic risks and possible loss to consumer welfare of the LPFM service).

⁵ 47 U.S.C. § 399b, 47 U.S.C. § 541(e).

⁶ It is true, that they do not enjoy protection from new full power stations outside their protected contours either, but new such stations would be hindered by the third adjacency spacing criteria and other limitations.

programming and economic efficiency is well-established. Former Commissioner Ervin S. Duggan stated it succinctly:

Broadcast stations that can't stay above water economically can't serve their communities. Broadcasters have always borne a fundamental obligation to provide service in the public interest. Most have borne that obligation quite well, despite occasional adversity. But the FCC and the nation cannot expect broadcasters to fulfill that obligation if the structure and economics of the industry don't permit it.⁷

The threat of compromising this maxim of the public interest should have compelled the Commission to fully consider the economic impact of its decision.

Are these threats minimal or serious? We are left to wonder, wait and see for the Commission has refused to seriously consider what might be the economic consequences. I fear that many small and independent stations will find this to be the straw that broke the camels back, or that last "wafer thin mint"⁸ forcing them to sell out or cut back its local programming. The result would be a further decrease in independent and perhaps in minority and female ownership of full power stations that we so often bemoan. The lost community value, furthermore, would not simply be transferred to the new LPFM stations. Those stations may serve a very small piece of the overall community, but could not possibly make up for the greater service coverage of the lost full power station, nor the lost opportunity for a minority or women to share in the fruits of the broadcasting business.

Signal Interference

I must confess that I have no clear idea as to whether or not existing broadcasters will suffer intolerable interference. The engineering studies on the record reach very different conclusions. When carefully examined, however, one finds that the basic methodologies and analysis are consistent with each other. Where these studies differ, is what the various proponents believe is "acceptable" interference or degradation of service. This I find to be a relatively subjective judgment rather than an engineering one, colored by the self-interest of the various proponents. It is my practice in such a situation to defer to the conclusions of the Offices and Bureaus when not clearly persuaded otherwise. Thus, customarily, I would accept the staff's conclusion that third adjacency protection is unnecessary. I do have some hesitancy, however, because I note that by doing so, we diverge from protections we have insisted on—some say with unbending resolve—with respect to other FM services. Nonetheless, to resolve this lingering doubt I would have introduced the LPFM system another way than that we adopt here.

⁷ "Localism Tied to the Tracks?," remarks of Commissioner Ervin S. Duggan, FCC before the Mississippi Association of Broadcasters (June 27, 1992).

⁸ To those unfamiliar with Monty Python, this line comes from the film *The Meaning of Life*. I will not describe the scene other than to say the phrase is spoken by a waiter urging a patron who has over-indulged to have just one last morsel, the infamous "wafer thin mint."

A Better Way

On balance, I would have taken a different approach to introducing LPFM service. I believe in light of lingering concerns about signal interference and my pronounced concern about the economic impact of the new service we should have introduced this service gradually. It might begin with some experimental licensing in certain communities to assess the real world impact of signal interference. Subsequently, we could have fully introduced the service with third channel adjacency protections. This would have two benefits. First, it would minimize the risk of interference in a manner consistent with existing services and second, it would introduce substantially fewer stations into the market, thereby allowing us to evaluate the economic impacts of these new stations in these markets. Finally, if all went well, we could then move to full service with less adjacency protection, as warranted by our experience. Such an approach strikes me as prudent and preferable to the shotgun introduction which we let loose today.

Conclusion

For the foregoing reasons, I dissent in part.

SEPARATE STATEMENT OF COMMISSIONER GLORIA TRISTANI

Re: Creation of a Low Power Radio Service (MM 99-25)

The radio business has undergone unprecedented and gargantuan consolidation over the past several years. Since the 1996 Telecommunications Act was passed, the number of radio station owners has decreased about 12% (and proposed mergers would reduce that number even further), even though the total number of stations has actually *increased* by almost 4%. As radio has become concentrated in fewer and fewer hands -- and as distant owners, national play lists and syndicated programming become more and more prevalent -- I've grown increasingly concerned about the effect of consolidation on localism and the diversity of voices on the public airwaves.

The new low power radio service we are adopting is a partial antidote to the negative effects of consolidation. It promotes localism and diversity not by limiting the rights of existing voices, but by adding new voices to the mix. Under the First Amendment, this is the best kind of response -- the answer is more speech, not less. The new low power service also comports with our statutory obligation to “[s]tudy new uses for radio . . . and generally encourage the larger and more effective use of radio in the public interest.”¹

The public response to the low power radio proposal has been enormous. We've heard from thousands of individuals, schools, churches, community groups and local government agencies who would like to use the public airwaves to serve their communities, but cannot under our existing rules. We've also heard from countless individuals who would like to hear more varied voices over the public airwaves. Providing an outlet for new voices to serve their communities is why I am proud to support this new service.

I have carefully considered the concerns of low power opponents who worry about undue interference in the FM band. Based upon the engineering data in the record, however, I am convinced that nothing we are adopting will jeopardize the technical integrity of the spectrum or the transition to digital radio.

I have also heard the concerns of broadcasters who worry that competition from low power broadcasters could make it harder for them to survive. I would respond as follows. First, we have made low power radio a noncommercial service, so there will be no direct competition for advertising dollars. Second, while I understand broadcasters' competitive concerns, and while many of them have served their communities with distinction over the years, I believe it is the Commission's duty to maximize competition wherever and whenever we can. That's why, for example, the Commission licensed satellite radio -- a potentially significant competitor to terrestrial radio set to debut commercially in the near future. It would be a dangerous precedent for the government ever to declare that there is “enough” competition in any market.

¹ See Communications Act, Sec. 303(g).

Ultimately, however, the adoption of a new low power radio service has been driven by the scores of Americans who want to use the public airwaves to speak to their fellow citizens, and the scores of Americans who want to hear the additional diversity these speakers could provide. Under the conditions set forth in this Order, I can find no legitimate government interest in denying these citizens what they seek.
